Operating an Incubator.

Incubators have received considerable attention within the last few years, and, though they have been in operation for over twenty years, it is only within the past few years that they have been so perfected as to be considered reliable. The puzzling problem with them has been to discover the exact temperature at which they should be maintained in order to secure a fair hatch. On this point there is still a diversity of opinion, but 103 degrees has been fixed upon as the proper average heat. Several experiments have been conducted during the last season with a view of deriving greater knowledge in regard to artificial hatching, and, like other matters that come up for consideration, opinions change as newer ideas are presented. Several months ago we gave in these columns complete directions for making and operating an incubator that had been thoroughly tested and proved satisfactory. Later trials have resulted still more favorably, demonstrating the fact that artificial incubation is a success and may be conducted with profit. The proper heat is claimed to be 103 degrees, but some of the most successful hatches resulted when the heat was rather high in the beginning, and lower near the close. Thus, instead of keeping the eggs at 103 permanently, they were kept at 105 the first week, 104 the second, and 103 the third, as the chicks seem to hatch better when coming out under a low temperature. This belief, however, may not be considered as an established fact, for good results have been obtained at different temperatures. The bodily heat of a hen is much greater in the beginning of her inclination to sit than when near the time of hatching, and the chicks themselves create a large proportion of heat. The greater the heat the larger the amount of moisture required, and the loss from the chicks dying in the shell, which usually occurs on the twentieth day, is greater when the heat is high, the amount of moisture required being insufficient under a high temperature. That the eggs are not kept by the hen at any particular temperature is well known from the fact that she changes the outside eggs to the center daily, and consequently the change of temperature in an incubator does not necessarily prevent hatching. One advantage of artificial incubation is the freedom from vermine, which is a very important matter. Another advantage is that a large number of chicks may be hatched at a time of the year suitable for bringing them into market when prices are high. In artificially hatching the chicks the operator must determine to give strict attention to the enterprise, as a majority of the failures arise from the fact that, as a rule, the parties operating incubators expect too much from very little labor. They should be willing to devote as much time to the business as they would give to any other pursuit. Success depends as much upon the operator as upon the incubator.—*Philadelphia Record.*

The Encore Nuisance.

Let us suppose a hungry man goes into a restaurant and orders dinner (says an exchange). He finds it excellent, and devours it with a relish—Worcester sauce, probably. If he encores that dinner by thumping on the floor with his cane, and shouting, "Bravo!" till he is hoarse, the proprietor does not furnish the enthusiast a second dinner, except on the express understanding that he is to pay for two meals instead of one.

A man goes into a cigar shop, invests in a cigar, and, upon lighting it, discovers that it is very fine. That man may stamp the heels off his boots, but under no circumstances does the tobacconist come forward with a gracious bow and beaming smile and hand out a complimentary cigar; at least, we have never noticed anything of the kind.

These things being so, how does it happen that an intelligent audience that has paid a shilling a head or more for admission to a concert will go on as if they meant to tear the place down if the performers do not duplicate the programme, giving them double value for their money? If the performance is so much better than the audience expected, it seems to us that it would be more reasonable for them to hand over another shilling apiece at the ticket office as they passed out after the performance was over. We have never observed any audience do that, although we have watched them closely as they have passed out.

The truth is, that in every audience there are a few fellows who want to make the spectators believe they know good music when they hear it—that they are music sharps. They start the racket, and the rest of the audience catch the contagion, just as other nervous diseases are caught. An occasional encore is admissible; but when an audience encores everything, then the young man who starts the nuisance ought to be pointed out to the audience.—*Sel.*

Two European Monarchs.

A more striking contrast in the relations between ruler and subject is not conceivable than that now seen in two of the great cities of Europe. The Czar of Russia is in Warsaw, the capital of Poland, protected by the services of spies and an imposing array of military. A thousand arrests have been made during his stay in that city, but notwithstanding every precaution, and the risk of certain death to any unauthorized person approaching the autocrat, nobody would be surprised to hear that he had fallen a victim to violence. A section of his wretched and disaffected people, no one can say how numerous, nor how near his person at any time—some even in the ranks of his guards—are thirsting for his blood, and his appearance in public at all is an act of courage which contrasts with the seclusion of the earlier part of his reign. Shifting the scene to Naples, in sunny Italy, where hundreds of people are dying of cholera every day, King Humbert IV. is at the head of the noble men and women who, at great risk to personal safety and their life, but with confidence in the good will and affection of the people, visit them in their stricken homes, and by large gifts and gentle ministrations, do their utmost to assuage the horrors of cholera in the towns and cities afflicted with it. The meanest and filthiest districts of the lovely and amiable Queen Marguerite is at her husbands's side in this labor of love, a ministering angel to the needs of the poorest of her subjects. What gain follows the moral influence of kingly and queenly example in these instances will never be known. The whole royal family of Italy, excepting the children, and the most cultured and the best of the sons and daughters of the nation, vie with the amiable people at its head in acts of practical beneficence which dignify human nature, and relieve, with heavenly beauty, the dark horrors of the pestilence.

The Dakota Cyclone.

The peculiarities of the recent cyclone are coming in. Twelve miles northeast of Huron a man named Briggs had thirty-two head of cattle killed by being blown into the James River and drowned, or thrown on the ground and mashed. He had six horses killed in the same way. Eleven hundred bushels of threshed oats in his granary were all swept away. His wife is a well-known butter-maker for the Huron market. The last three months she and her servant packed all the butter they had made in crocks and stored it in the cellar, several hundred pounds in all. When they saw the storm coming they went into the cellar and crouched in the northeast corner of it, the direction from which the cyclone was coming. It carried away and destroyed the house, scooped up every crock of butter, carried them away, and they cannot be found. The women were unhurt.

William Felkey had two horses in his stable, also a colt. The stable, horses, and colt are yet to hear from. Myron Kenney had two harnessed horses and a stable halter wafted away. The horses were seen to go up in the air and come down a long distance off. About two hours afterward they walked back home with all the harness off but the collars.

S. N. Davis saw seven regular cyclones in the air at the same time, ten miles away from Huron. The Rev. George A. Cressey lives a mile from the business center of Huron. The cyclone that struck near here was in plain sight from his house, a mile distant. He says no wind was stirring outside the storm belt, and there were no other clouds in the sky. At times two or three cyclonic clouds were in view. All had a special motion, and looked exactly like an ordinary tin funnel. The cloud gradually rose and fell, going southeast. While in sight there appeared to be a double funnel, the outer one black and the inner one white. When the lower end touched the ground everything it touched was destroyed.—*Inter-Ocean.*

Teach the Boys and Girls to Work.

They will make the men and women of twenty-five years hence; and just as they grow up so they will be, industrious, moral, and religious, or the reverse. Schools of learning are popular and valuable, and should not be neglected; but it should not be forgotten that idleness is as destructive to all that is good as ignorance. Here is a family containing a boy and a girl, both nearing majority. The girl is a pattern of industry, neat, careful, and economical, not only in the house, but in the garden as well; and cannot fail to be a blessing wherever her lot may be cast. The boy, on the other hand, has learned little but what he has found on the streets, knows no trade, and has no means of subsistence when he comes to be of age. The necessary absence of the father for a large part of the time partially accounts for this, but does not excuse it. If there are many cases like the latter, is it to be wondered at that there are tramps?

Sneezing and Shivering.

Nature's provision against the consequences of a "chill," and for the prevention of a "cold," are sneezing and shivering. A violent fit of sneezing often saves a chilled body the consequences of the nerve depression or "shock" to which it has been subjected, and this shock may in its first impression be very limited in its area; for example, the small extent covered by a draught of cold air rushing through the crevice of a door or window. The nerve centers are roused from their "collapse" by the commotion or explosive influence of the sneeze. If sneezing fails, nature will try a shiver, which acts mechanically in this way. If this fails, the effects are likely to be very serious, and bad consequences may ensue. The cold is slight when sneezing suffices to recover the nervous system quickly from its depression, and grave when even strong shivering fails to do so.

A white woman carried her dead child wrapped up in a sheet into Athens, Georgia, in order to get its measure for a coffin.

Occupation for Women.

The demand for good dress-makers is so great, and the supply so inadequate, that the wonder is that all women who are obliged to be self-supporting do not take up the business. The capital necessary—in addition to a natural adaptability for the work, without which success is not obtained in any business—is very small, viz., a good sewing-machine and a small amount of money to be used in advertising. There are dress-makers and dress-makers and dress-makers, good, bad, and indifferent, but a good dress-maker need never want for customers. If she but make a gown to fit and please one customer, others will soon come to her.

Of course, there is labor and responsibility connected with the business, but no one ever succeeds in anything without these.

In this, as in every other profession or business, there is a field for individual labor. The woman who can design her own dresses and adapt them to the style, age and condition of her customers, holds rank among the artists of the day. There are conventional dress-makers—those who make their dresses after the French fashion-plates, utterly regardless of the characteristics of their customers—and there are women, too, who can with impunity wear these conventional clothes; while the great majority of wearers of gowns have a great and intense longing for garments entirely their own, not patterned exactly after those worn by their neighbors.

Dress-makers with ideas and sense, and judgment enough to carry them out, are what we need. By merest chance we now and then fall upon an artistic dress-maker who believes that the rules which govern art in other things should govern it in regard to covering and adorning the human body. Such a dress-maker enhances the beauty of the figure and diminishes the defects, not by padding, which is insufferable, but by judicious selections of styles and artistic arrangements of folds and fullness.

The customer who has a fine figure, she dresses in a severely plain style, while the one who has nothing but a bundle of bones upon which to hang her gown, she arrays in full waists and multitudinous folds, which not only cover her deficiencies, but give her a really artistic and picturesque effect.

She never insists upon having a customer wear a certain style simply because it is new; she knows neither old nor new; she only knows what is becoming. She has the soul of an artist, the eye of a mechanic, and fingers of an expert. Would there were a race of her, and we could all employ her.

Religion vs. Finance.

A member of a church congregation in Wisconsin was last fall charged with gambling in stocks, and brought up before a committee for investigation. The trial began by a deacon asking:

"Brother Smith, the charge is gambling in stocks."

"Yes, sir."

"And you plead not guilty?"

"No, sir, I plead guilty."

"Then you do buy and sell stocks, speculate in wheat and oats, and sell futures in pork?"

"I do, sir. Didn't I give $1,000 in cash to help build this church?"

"Yes."

"Well, I scooped that in on a little deal in pork. Didn' I pay in $500 on the organ?"

"Yes."

"That was part of my profits on a spec in oats. Didn't I foot a deficiency of $400 in the minister's salary this year?"

"Yes."

"That came from a rise in stocks. Didn't I chip in $700 toward the parsonage?"

"Yes."

"That came from a corner in oats. Haven't I whacked up on the orphan asylum, the new bridge, the park and the fire engine?"

"Well, that means more corners, and holding on till I felt my hair growing gray. Gentlemen, I will step out for a moment and let you reach a verdict."

He stepped, but it was only thirty seconds before he was called in and congratulated on the verdict of "not guilty."—*Wall Street News.*

Dyed for Love.

An exceedingly sad case of infatuation is reported from a neighboring town. A very bright young white man has become completely infatuated with a handsome colored girl in the community. She resisted his advances so persistently, on the well-taken grounds of the differences in their races, that he became almost frantic from despair. He sat on the pickets of his father's back fence and moped for a long time, until finally a bright idea struck him. The only barrier between them was a difference in color. Could it not be removed? He flew from the pickets on the wings of love, and when he again returned he was entirety unrecognizable, having undergone the transformation which negro impersonators in the minstrel shows experience before the performance. In spite of the piteous appeal of his friends he has persisted in his refusal to remove the coat of tan from his face ever since, and declares that he will win his beloved or dye, or remain dyed in the attempt. His picture, as he sits upon the pickets of his father's back fence, is now being taken by Grit's special artist. There is only one drawback to his appearance. His hair is red; but the artist says that this will only add to the effect.

The seats in a Western church are set on pivots, like those in a dry goods store. This enables the fair worshipper who sits pretty well up in front to turn around and count the number of new bonnets in the house without screwing her head off almost, and going home with a stiff neck.—[Norristown Herald.

Sunshiny Husbands.

We read so much about the obligation laid upon the wife to be a perpetual sunbeam in the house, that a word to husbands on this topic may not be amiss.

A cheerful atmosphere is important to happy home life. It is hard for children to be good when they are exposed to an incessant hail-storm of fault-finding from their parents. It is very difficult for a wife to maintain a calm and charmingly sweet demeanor when her husband is critical, or sullen, and takes all her tender efforts with indifferent appreciation.

I know full well the air of polite amazement or amiable incredulity with which men receive the statement of a woman's opinion that in the home partnership the wife, and not the husband, pulls the laboring oar. Still, it is true, that let a man's business be ever so engrossing, ever so wearisome, ever so laborious, the mere fact that he goes to it in the morning and returns from it at night, sets him above his wife in ease and comfort. For him the slavery of routine has its break. He gets a breath of the world outside; he has change of scene daily; he sees people and hears them talk; and his home is distinctly his refuge and shelter.

Let a wife and mother love her home and children with the most absolute, unswerving devotion, and serve them with the most selfish fidelity, there are, nevertheless, times when she is very weary.

She knows better than any one else the steps and the stitches, the same things done over and over, and the pettiness of the trials that come to the nursery and kitchen. They are so insignificant that she is ashamed to talk about them, and I fear she sometimes forgets to tell her Saviour how hard they press her; and so, bearing her cross all alone, its weight becomes crushing. A sunshiny husband makes a merry, beautiful home, worth having, worth working in and for. If the man is breezy, cheery, considerate and sympathetic, his wife sings in her heart over puddings and mending-basket, and counts the hours till he returns at night, and renews her youth in the security she feels of his approbation and admiration.

You may think it weak or childish, if you please, but it is the admired wife—the wife who hears words of praise, and who receives smiles of commendation, who is capable, discreet and executive. I have seen a timid, meek, self-distrustful little body fairly bloom into strong, self-reliant womanhood under the tonic and the cordial companionship of a husband who really went out of his way to find occasion for showing her how fully he trusted her judgment, and how tenderly he deferred to her opinion.

In home there should be no jar, no striving for place, no insisting on prerogatives, or division of interest. The husband and wife are each the complement of the other. And it is as much his duty to be cheerful as it is hers to be patient—his right to bring joy into the door, as it is hers to sweep and garnish the pleasant interior. A family where the daily walk of the father makes life a festival, is filled with heavenly benediction.—*The Leader.*

A Trick on a Spider.

A great many years ago, a prisoner of state, who was allowed to cheer the solitude of his dungeon by playing on his flute, discovered after awhile that every time he played a great number of spiders gathered about him. Since then, the liking of spiders for music has been proved. I myself had often wished to play for a spider audience, but I was not well enough acquainted with any musical instrument to coax a tune out of it.

A scientific gentleman of Europe gave me a valuable hint by an experiment of his own. He used a tuning-fork. Now, I can play a tuning-fork as well as anybody. I procured a tuning-fork, and then sought out a spider. I found a handsome, brand-new web; and, though I did not see Mistress Epeira, I knew she must be at home. *Epeira diadema* is her full name, though most persons call her a garden spider. It is she who makes those beautiful, wheel-like webs which festoon the rosebushes and trees.

As I have said, Madame Spider was not visible. I knew, however, she must be in her gossamer parlor, which is attached to her web.

Here was a good chance to try tuning-fork music. I rapped the fork on a stone, and in a moment a soft, melodious hum filled the air. I touched one of the spokes of the web with the fork. On the instant, Madame flew out of her parlor in great haste, hesitated a moment at the outer edge of the web, and then, instead of going straight to the tuning-fork, ran to the very center of the web.

When there, she quickly caught hold of each of the spokes, one after another, and gave it a little tug, as a boy does his fishing-line to see if a fish is hooked. Each was passed by until she came to the spoke upon which the humming fork rested. There she stopped, and it was easy to see she was excited. She gave the whole web a shake, then tugged at the spoke again. "Hum-m-m-m," still sang the fork, rather faintly now, however.

Madame was satisfied. Her mind was made up. Down she darted, and caught the end of the fork in her arms. She tried to bite the hard metal, and at the same time she spun a web of silk around and around the two prongs, which by this time had ceased vibrating.

I pulled the fork away, and Madame Epeira retired in disappointment to the center of the web. But if she was disappointed, so was I; for I was satisfied that it was not the music of the fork that had attracted her. Unfortunately, it was altogether too probable that she mistook the hum of the fork for the buzz of a fly, a sort of music no doubt very sweet to her.

Time after time, I repeated the experiment with the fork, touching in turn each spoke of the web; and each time Madame Spider was deluded into trying to capture the tuning-fork. It was odd that she did not learn wisdom by repeated disappointment.—*St. Nicholas.*

Children as Savages.

About the time when baby begins to put away monkey manners, and to stand on two feet like a man, he begins to show, in a very marked degree, the characteristic of savage tribes. For two or three years of this part of his life the best baby is a little savage. His ideas of property are intensely savage. He may be said to be always more or less "on the grab" (I object to slang as much as any man, but really there is no other way of describing the tendencies exhibited at this stage of baby's career.) If he has small brothers or sisters (or both), he is always more or less at war with these neighboring savages. If he is deprived of anything he has come to regard as his property (quite mistakenly, it may well be), or if he sees in the hands of his small kinsfolk any goods or chattels which seem pleasing in his eyes, he has but one way of expressing his wishes, using his hands as weapons if he have no others handy, but bringing down a stick or brush or book (as the case may be) on the head of his enemy with all the zeal of a Fijian or an Ojibbeway on the war path. Girl babies are pretty nearly as bad as boy babies in these matters, only the girl savage differs from the boy savage much as savage woman differs from savage man. Of course there are many baby boys and baby girls who show little tendency to savagery, just as there have been many uncultured races of man who have been gentle and innocent. But the quiet babies are always weak and unhealthy. In the struggle for existence they succumb before their more ferocious brothers, just as the quiet and gentle savage tribes perish before their tomahawk-flourishing, spear-throwing, club-weilding neighbors.

The Irony of Time.

Louis Napoleon, when a resident in London, used so prophesy that some day he would sit on the French throne.

"Did you ever know such a fool as that fellow is?" asked an English statesman, who had been bored by Louis's prophecies. "Why, he really believes that he will be the Emperor of France."

The prince, while a resident of London, was made the victim of a cruel hoax. Some one sent him a forged invitation to a grand dinner party at Windsor castle. He dressed himself in a court costume and presented himself at the castle gate, to be told by the porter that as his name was not on the list he could not enter, and the prince insisted that he had received a card, a higher officer of the royal household was sent for.

"Really, sir, there must be some mistake. As her majesty has not the honor of knowing Prince Napoleon, she will be unable to receive him."

Ten years later this rejected prince, then the Emperor of France, slept in the best "spare room" of the castle, and danced with the Queen in the Waterloo room. Such is the irony of time.

A Clever Husband but a Cleverer Wife.

Women are skillful. "Who is that horrid whisky bloat?" asked a lady of an acquaintance, while they stood viewing the guests at a fashionable reception. "Which one?" "That one with the red mustache and awful nose. Don't you see?" "He is my husband!" "Oh," laughed the lady; "I see you are not sensitive," although she saw vengeance in the eyes of the insulted lady. "Several nights ago a friend made a similar remark about my husband, and I became very angry. I declared that it would anger any woman, but my friend said that you, having the best husband in the world, would not care, and I wagered a pair of gloves that you would; but you see I have lost. I hear that your husband is spoken of as an available candidate for Governor! How clever he must be!"—*Arkansaw Traveler.*

Tricks of the Trade.

They do say that sales-people in shoe stores have an unique way of deceiving lady customers. Their way is to lay aside a pair of shoes to which some trivial objection had been made, and bring forth others, which are tried on without success. Then the sales-person suddenly remembered that a few hours previous there arrived a case of sample shoes which have not yet been put upon the market. After a few moments spent in another part of the establishment the attendant comes forth with the first pair of shoes condemned, done up in an elegant box, which is unwrapped with due ceremony, and the shoes held before the customer's eyes in a way that is both tempting and convincing. "This is a new style," says the sales-person, "and one that will become popular."

"Have none of them been sold?" asks the customer.

"No, madam; let me try this one on you. Ah, that's your fit, and gives your foot an uncommonly pretty look!"

Nine times out of ten the trick does the work, and the customer makes the purchase, all unconscious of the fact that she has a shoe which has been in the store probably for months, and to which she took exceptions but a short time before. It may be very wicked to deceive the ladies in this kind of a style, but the seller eases his conscience by declaring that it is a deception which has done no harm while it aided him to make a sale.

There is one thing which can be said to the honor of the spoiled child. He realizes that too much kindness has spoiled him, and he heroically determines that he will spoil nobody else in the same way.

TRAVELING.

Railroad Time Table.

CARSON & COLORADO R.R.

....TAKING EFFECT....

Saturday, August 9, 1884.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, JANUARY 3, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

If people will calmly reflect upon the events of the year just past, they will be very apt to find that most of the trouble and sorrow endured during its continuance was caused by their own want of patience, want of charity, or willful ignorance. Great events, that attract the attention of the whole world, usually affect directly only a few individuals. The sum of human happiness is made up of the daily intercourse of the home circle, and that can be made the nearest approach to heaven on earth by the members being affectionate and courteous among themselves.

It Is to be hoped that other states have not the same evils in connection with their schools that seem to plague the people of Nevada. Speaking of a Teachers Instutitute held in Storey county this week, the Virginia *Enterprise* "says: There are, however. certain obstacles in the way which prevent teachers Institutes from serving fully the object of their existance. Chiefly among these we may mention the close alliance of "politics" with our public school system, and the application of "spoils" system, or something much worse, to the business of appointing teachers, arranging the course of studies and controling schools generally. Men who can not tell the difference between grammer and grindstones, who can not spell correctly ten consecutive words, who are bankrupted in morals, and who are incapable of any intellectual effort whatever, are hiven practical charge of the educational interests of intelligent communities. The Board of School Trustees is in nine cases out of ten a Board of Ignoramuses despised but justly dreaded by all who are subject to its authority. Now if the principals and teachers were to express their honest thoughts about the individuals to whom they are beholden for places, and were to assail the system which keeps the public schools in the filthy mire of ward politics, what an uhheaval would follow! And yet were a vigorous onslaught made upon the evils which flow from the connection partisan politics with the administration of our schools, who could fully estimate the benefit of such a raid? All talk or pedagogical hash about methods of education, its true aim, how to improve the qualifications of teachers, about systems and theories, along with the pet schemes of hobby-riders, would pale into utter insignificance in the presence of a rattling fire, directed by those who are best acquainted with the defects of our school system, upon the abuses which have grown up and gained obnoxious strength under the plan of electing School Trustees named by conventions of gutterstnipe politicans,

The New Year opens with good prospects for improved business in Owens valley. In Deep Springs, Beveridge, and Cerro Gordo, the prospect for lively times in the mines is better than has been known for some years past. The late strike by Straus and Chon is unquestionably of much importance, and will soon be felt in business. But the most important event is the reopening of the mine at Cerro Gordo. The great stream of wealth, amounting to many millions of dollars, that flowed from the camp in former years and made prosperity for every body in the county, is likely to be set in motion again. The source of the stream was not exhausted, the flow was only arrested by the chill of unfriendly feeling among the owners. Arrangements recently perfected have removed the difficulty.

The demand for land available for homes is every day becoming more pressing; the vast amount of fine land in Owens valley, with the abundant supply of water, cannot be left neglected much longer. The world cannot afford to neglect a region, rich in all the gifts of soil and climate, and that would support in comfort one hundred thousand people. While millions in other parts of the United States are toiling for months in deep snow, and suffering from intense cold, here in Owens Valley cattle are fattening on the grassy plains, and vegetables are growing in the gardens. A depressed condition of business has prevailed everywhere through most of the year just passed. Inyo county has not entirely escaped the effects of that depression, but neither has the effect prevailed here to anything like the same extent as in other regions. While there was no marked activity in the business of the county, yet all the people did fairly well, and improvements in homes and farms are proof of reasonable prosperity. Comparing with other parts of the country, looking over the history of the past and considering the prospect for the future, conviction is very firmly fixed that Inyo county, and Owens Valley in particular, is a good country to stick to.

San Barnardino county has an Immigration Association. At a late meeting of the Board of Directors it was determined to to let a contract for printing 10,000 copies of a pamphlet on the resources of San Barnardino county the pamphlet to consist of not less than sixty fout pages. Contract for 50,000 copies of an eight-page circular was let to L. M. Holt. These two enterprirses will be a valuable aid in advertising the resources abroad of the county. Several counties are working vigorously to make known their resources, and attract settlers. Inyo has immense undeveloped resources, that would attract thousands of settlers, but no combined effort is made to place the attractions of the county before the public. Every one who owns a tract of land would have the value of his property increased by the settlement and improvement of udoccupied lands near him. The present settlers should combine to bring about this result.

The decision of Judge Sullivan in the Sharon case, adds more proof, if that were necessary, that in our courts of justice law and evidence alone governdecisions. Sharon's millions gave him no advantage over the woman, in the mind of the Judge. The people of the United States are law abiding, because they believe the Courts fairly interpret the law, no matter who are the parties interested. The woman in this case may be an adventuress; she is certainly entirely destitute of all womanly delicacy, but Sharon is a man without a trace of respect for woman, or regard for the decencies of society. He presumed upon his millions to violate with impunity all the requirements that make society possible; he is a moral outlaw; he used his money only to injure society, to degrade the individual by his act, and corrupt the community by his example. Being utterly unprincipled himself, if he has been brought under the power of the law by one equally unscrupulous, but of sharper wit, society may rejoice. Sharon loves two objects—his money and himself. The loss of his money will be felt as a punishment; he will not be humiliated, for he has not sensibility enough to feel ashamed of his baseness.

The Dunkers.

While we were passing out to Waynesboro we could see the Dunkers going to church in every direction. Off to the left at the edge of a woods was a small church with many gravestones around it. "There," said the driver, "is Price's Dunker meeting, where they hold their biggest lovefeasts. You probably can not see bigger love-feasts in all Pennsylvania, or Maryland, or Virginia."

The railroad underneath us running through the Antietam Valley was speeding toward Mount Altor. We came to a small school-house, around which carriages were hitched, generally smart-looking buggies with plenty of varnish, and inside we could see the Dunkers sitting, the women in their little caps, the men in their long beards unshaved except upon the upper lip. Said I: "Is it true that the Dunkers will not tolerate musicsl instruments!"

"It was against their doctrine, but their daughters are bringing in pianos and organs now. There was a time when they would not have an accordian in the house nor a mouth-organ. But their sons are getting to be pretty hard cases. Sometimes at the Dunkers love-feasts you can see the worst fighters in the children of the Dunkers, who are eating the Passover supper. They didn't used to vote. Now they vote pretty sharp, I tell you. There was a time when they never went to law with each other, but now the lawyers say nobody enjoys a suit more than the Dunkers."

Thus talking we began to descend a beautiful piece of road, shaded by great oak trees and hickery trees, with a hill on the right, while directly underneath us could be seen another road coming through a valley, the two apparently to meet close by. Looking to the right and through a grove of oaks and other trees we observed a kind of triangular meadow in which was a white plastered church and a very long, red brick house. "There is Snow Hill," said my acquaintance, "where the Seventh Day Baptists have a 'nunnery.' See them now working in the fields and mills on Sunday."

I looked with interest and surprise on this strainge settlement. The house was about 130 to 150 feet long, and seemed to have been extended from time to time, and it had on the top a sort of small cupola and bell, with a wheel to ring the bell, while the nunnery coached under the hill. Close by were the beautiful Blue Ridge Mountain, looking so inviting with their green and blue sides, and a little white settlements and patches of mountain pasture and fields. I then recollected the Snow Hill was an offshoot of Ephrata. "Ah," said my friend, "this old settlement is on its last leg. They haven't got half a dozen people there now, and they don't agree with each other. The monastic life does not suit this railroad age. The Seventh Day Baptist, desiring not to be outdone in the character of their love-feasts by the regular Dunkers, offered great entertainments for years, but the rowdies finally molested them. Some years ago their spring house was invaded, the milk drunk and all the crockery broken at a love-feast. When the followers of Conrad Bissel sued these rowdies a counter-suit was brought against them for breaking Sunday. It is said that the court decided against the Seventh Day Dunkers.

The French have a machine for stamping letters and cancelling the stamps.

REMARKABLL TREES.

Facts Relating to the Immensity of Tree Growth.

One third of the land surface of our planet is covered with trees. The largest tree in the world is situated in Mascoli, near the foot of Mount Ætna, and is called "The Chestnut Tree of a Hundred Horses," and is believed to be the oldest tree in the werld. Its name arose from the report that Queen Jane of Aragen, with her principal nobility, took refuge from a violent storm under its branches. At one time it was supposed that it consisted of a clump of trees united, but on digging away the earth the root was found entire, and at no great depth. Five enormous brancoes rise from one trunk which is 212 feet in circumference. A part of the trunk has been broken away, and its interior is hollow, and large enough to contain a flock of sheep, or to admit of two carriages driving aberast through it. It still bears abundance of fruit, and its collectors have built a hut within its trunk, the better to promote their proceedings. At Tortworth, England, there exists a chestnut tree measureing, at four feet from the ground, sixty feet in circumference, although at the present time it is nearly a sylvan ruin. A fig tree stands on the northerly bank of the river Johnstone, in East Australia, in latitude 27 deg., longitude 151 deg., near Brisbane, measuring, three feet from the ground, 150 feet, and at 55 feet, where it sends off great brancnes, 80 feet in circumference. There lies upon Mount Bawbaw, Gippsland, southeast Australia, a gum tree measuring 480 feet as it lies where it was broken off at the top, and it is calculated to have stood 520 feet high. It measures six feet in circumference. In Bougouderch, near Constantinople, is a plane tree measuring 140 feet in circumference. At Bajak Bournarbashi, Asia Minor, is a pond overshadowed by three gigantic plane trees, the thunk of one of which one foot from the ground measures 43 feet in circnmference. The largest tree in the United States stands near Bear creek, on the north side of Tule river, California. It measures 140 feet in circumference. In Tuolumne grove, Nevada, stands "The Dead Giant Redwood Tree," measuring 119 feet in circumference, which has been so entirely hollowed by long use as a chimney, that the readmakers could not resist the temptation of completing the work of camp-fires, so they have cut a great archway right through the farther side of the poor dead stump, and led the road through it, so that now the high, crowded coach daily passes through the very heart of the great tree, which may have been young in the days of Julius Caesar. There are thirteen other trees standing near it measuring from 72 to 96 feet in circumference. The "Grizzly Giant," the monarch of the Mariposa grove, measuring 92 fset in circumference. The Tularo-Fresno forest, so called from being situated in those two counties (California), extending seventy miles in length, with a width in some places of ten miles, consists mainly of big trees, with a multitude of smaller ones measuring from 6 to 120 feet in circumference.

Near Santes, in France, stands an oak tree measuring 91 feet in circumference. At Holwood, near Bromley, England, stands an oak tree with a root projecting on one side into the shape of a settee. Seated upon that root William Pitt and William Wilberforce held togethea a conversation, as a result of which the latter, May 12, 1789, brought the question of the abolition of the slave trade before the house of commons. The tree is still known as the Wilberforce oak. Pliny (A. D. 23) tells us of a plane tree, growing in his time, which was in itself a forest. The governor of Lucia gave an entertainment to his friends in the hollow trunk, which is eighty feet in circumference. John Dowd discovered in Calaveras county, California, a grove of 103 trees, covering a space of fifty acres, measuring seventy to ninety-six feet in circumference. Throughout all England there are oak trees of remarkable size. The "Cowthorp Oak," on the banks of the Nidd, in Yorkshire, measures at the ground seventy-eight feet in circumference. The famous tree called the "Charter Oak," near Hartford, Connecticut, which fell August 21, 1856, was thirty-three feet in circumference at the ground, and it fell so as to leave eight feet of stump on one side and six feet on the other. A double-trunked tree is standing in a garden in south Beaver, Pennsylvania, which begins at the ground with a single trunk. This divides into two about one foot from the ground, continues thus for ten feet, and then becomes united again. Each of the twin trunks at the point of division measures three feet in circumference.

At Eny, in Cornwall, is a wych-elm which was planted originally on the left side of a stream, but having from some unknown cause been laid prostrate, the trunk fell on the opposite side of the stream, where it took root, and rising again, has acquired such dimensions that it covers an area of one-sixth of an acre. The main stem, which now forms a natural bridge across the stream, is ten feet in circumference, and the three trunks, which rise from the right bank of the stream, measure severally eight and a half, six feet, and five feet eight inches in circumference. An engraving of it may be seen in "John's Forest Trees of Great Britain," page 232. There is an elm tree in the south of England which measures sixty-one feet in circumference. On the Hubbard farm, in North Andover, Mass., stands a magnificent elm tree, measuring twenty-seven feet in circumference. A barberry bush has taken root in a notch twenty feet from the ground, which can be remembered by some of the oldest residents during their boyhood. At Bingham, Mass., near the former site of the Old Colony house, is an elm measuring twenty-five feet in circumference. The "Washington elm," in Cambridge, which has completed two centuries of existence, measures fourteen feet in circumference. Never was tree cherished with greater care, but its days are numbered. A few years, more or less, and like Penn's "Treaty elm" and the famous Charter oak, it will be remembered with the things that were. One of its stout limbs has been recently sawed off to prevent danger to travelers, and it will probably close its existence with the present century.

There is a fir tree growing near the baths of Alliaz, Switzerland, surrounded by a forest which it overtops more than thirty feet. The trunk is thirty feet in circumference at the base. At about a yard from the ground it puts out on the south side seven offshoots, which have grown into trunks as strong as those of the other trees of the forest. Bent and gnarled at the bottom, their trunks soon straighten themselves up and rise perpendicularly and parallel to the main stem. This feature is, perhaps, not wholly unparalled; but another most curious fact is that the largest two of the side trunks are connected with the principal by the sub-quadrangular braces, resembling girders. The space between the rough floring formed by the growing together of the offshoots at their departure and the girder limbs, is large enough to admit of building a comfortable hermit's hut within it.

At Prilly, near Lausanne, is a lime tree measuring, five feet from the ground, twenty-three feet in circumference. The proclamation of the reformation was posted on its trunk in 1530. Lambert's pine, on the northwest coast of America, attains the age of 1,400 years, and trees of 1,100 years are not uncommon. In Norfolkshire there is a famous pine tree measuring forty-eight feet in circumference. At Furstenfield, Germany, in a churchyard, there stands a linden tree forty-five feet in circumference. It is supposed to be 1,000 years old. A remarkable olive tree stands near Magliano, Italy, measuring thirty-five feet in circumference.

In Lombardy there is a cypress tree which is said to have been planted in the year of our Saviour's birth. There is even an ancient record that it was growing in the time of Julius Cæsar. It is the same tree against which Francis I. of France struck his sword in despair of losing the battle of Pavia. When the Emperor Napoleon was planning his road over the Simplon, he made a deviation in order to save it. In Oaxaca (Mexico) is a cypress tree measuring 117 feet in circumference. At Santa Maria de Tule, Asia Minor, is a cypress tree which at six feet from the ground measures ninety feet in circumference. There is a cypress tree on the Neuse river, North Carolina, in the hollow of which a horse could be turned around. Near the ruins of Palenque are trees whose age is estimated to be from 4,000 to 6,000 years.

Photographing Motion.

Interesting experiments in instantaneous photography are being made by Edward Maybridge at the University of Pennsylvania. A space on the college grounds have been set apart with a high board fence surrounding three sides of the enclosure; the fence has been painted a bright white. On the fourth side there is a shed covered with black material, while the ground is covered with an inch of coal dust. This is the background and directly opposite is a little structure, with an open front, containing twelve cameras. On Saturday a splendidly developed young student, a member of the University Crew, stripped to the skin, was photographed in various attitudes. He took his position in front of the row of cameras. At a signal he seized a bucket of water, raised it in the air and tossed away the contents. The instant he moved Mr. Maybridge touched an electric button. A series of sharp clicks sounded in a rapid succession the shutters of each camera were freed. As the last click sounded the water was falling to the ground, the twelve photographs had been taken of the young man, representing twelve phases of the movements through which his body went while lifting the pail and emptying it of water. Even the water itself was photographed as just leaving the pail, again as falling, and again as reaching the ground.

The young athlete was also photographed pulling a rowing machine, climbing a ladder, striking a ball, and other movements designed to bring his muscles into full play.

The Sharp Carving Knife.

It is understood that at the next meeting of the British Association the question of the existence of a Sharp Carving Knife will be thoroughly discussed, and in all probability a committee will be appointed to investigate the matter.

The universal incredulity which has hitherto been expressed by scientific persons as to the existence of a Sharp Carving Knife is, of course, due to the fact that no Sharp Carving Knife has ever been recognized and examined by a scientific person. The evidence as to its non-existence is therefore of a purely negative character. There is nothing in the manners and customs of nature which renders it intrinsically improbable that such a thing as a Sharp Carving Knife should exist. There are dull razors and sharp razors, dull penknives and sharp penknives, dull hunting knives and sharp hunting knives. Why, then, in view of the fact that dull carving knives exist, should not nature have created Sharp Carving Knives? Of course the answer to this is that while sharp razors, penknives and hunting knives are common, the Sharp Carving Knife, if it exists, is confessedly extremely rare. Still, those who believe in its existence are not arguing in behalf of any such absurd proposition as that it is common.

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of W. R. Tibbetts, Plaintiff, against the Maxim Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 1st day of December, A. D. 1884, for the sum of Eight hundred and seventy-eight 6-100 Dollars, besides costs amounting to the sum of Two hundred and fifty-five 95-100 Dollars, duly attested the 3d day of December, A. D. 1884, whereby I am commanded to make the amount of $1134 01, besides accruing costs and interest, I have levied upon all the right, title and interest of said defendant in and to the following described Real Property, to wit:

All that certain mill site commonly known and designated as the Maxim Mining and Milling Company's mill site, notice of location of the said mill site being recorded in book "D" of Land, Water and Mining Claims, page 408, Records of Inyo county, California; together with the 5 stamp mill and appurtenances situated on said mill site and known as the Maxim Mill. Also all machinery contained in said mill, consisting, in part, of one engine, one rock breaker and one pump. Also, the cabin situated on said mill site. Also that certain mine or mining claim known as the "Chase Mine" and described in book "C" of Land, Water and Mining Claims, page 38, Records of Inyo county, State of California, and being 1500 feet in length by 600 feet in width. Also about 1000 yards of 1 inch pipe in the ground and one spring of water. All situated in Union Mining District, Inyo county, State of California.

Notice is hereby given that on

Saturday, the 27th Day of December, A. D. 1884,

between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 1 o'clock p. m. of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Maxim Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in Gold coin of the United States.

Sheriff's office, Inyo county, California, December 4, 1884.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 3,..... 1885.

—The new county officers will each take an oath and an office on Monday next.

—Mike Tovey, who was shot recently in Hawthorne is recovering rapidly.

—A recent communication received by Mr. Dan Crough, says that his father is not expected to survive much longer.

—Horse thieves are getting away with some fine animals in Santa Barbara county. Judge Lynch is expected to be heard from soon.

—A suit, contesting the election of the Republican candidate for sheriff of Esmeralda county Nevada, has been entered in the District Court.

—Withrow, who shot Mike Tovey at Hawthorne, has been held to answer in the sum of $3000. Not being able to find bail, he was placed in jail.

—The legislature of this State will meet on Monday next. The most important matter for their consideration will be the question of riparian rights.

—George Gill has moved his law office to the place formerly occupied by Doctor Stevenson, and the doctor has moved his office over Webb's butcher shop on Main Street.

—For the first time in sixteen months the school at Lone Pine is closed during the holidays for a vacation. The long term of active school work is creditable to the patrons of the school and the teachers.

—The Central Pasific railroad will issue a new time table next weed. It will affect the west-bougd train, making it three hours earlier, and will also affect trains on the Carson and Colorado railroad.

—C. J. Johnson of Lone Pine is about to start on a trip to Michigan. Mr. Johnson has just patented an invention that will do away entirely with the use of shoe-strings, and his business east is to introduced the invention.

—R. S. Miner and A. R. Burnside had a rough time getting to Bodie last week. The *Free Press* says; On reaching the grade so much snow was encountered they were forced to abandon their vehicle, with all their baggage, and break a trail for the horses. They arriven in town at an late hour, weary and nearly worn out.

—There is but little probability that the furnace at Elna will be started up again soon. The property has now been in the hands of the Sheriff for several weeks, and before work can be resumed all the claims against the concern amounting to several thousand dollars, must be satisfied. The means for doing this are not very apparent.

—In the gardens at Lone Pine plenty of lettuce, young onions and celery are now produced. These articles might easily find a market at points along the line of the C. & C. railroad farther north. If hotel keepers or chers at Candelaria, Bellville, Hawthorne and other towns will communicate with Mr. A. C. Harvey at Lone Pine they can be supplied with all of these vegetables they may require.

—Samples of wine of the vintages of '83 and of '84 and a turkey, were the christmas gifts of Mr. Rafael Diaz to the printers. The turkey was as fine a bird asever was eaten. Not being connoisures, we can not speak critically of the merits of the wine, but do know that both samples tasted very pleasent, and either would merit the commendation of Solomon or Paul, as making glad the heart and to be taken "for thy stomach's sake, and thine often infirmities.

STOLEN.—On Christmas night a saddle was stolen from Mr. Densmore's place near the Fort.

SOCIAL DANCE.—After the fine art entertainment at Mairs' Hall Saturday night, there will be a social dance. Good music will be in attendance.

FAREWELL PARTY.—A farewell party will be given to Mr. and Mrs. S. G. Gregg, on next Thursday evening, at Mairs' Hall, Independence. All friends will be heartily welcomed to the party; printed invitations will be distributed, but it is hoped and expected that all friends of Mr. and Mrs. Gregg will attend, whether one of the invitations should be received or not.

THE ARCTIC REGIONS.—A grand scioptic dioramic exhibition will be given at Mairs' Hall on Saturday evening, January 3d, illustrating the polar regions; also more than 200 celebrated paintings, comics, etc., from all parts and ages of the world. The whole to conclude with a distribution of valuable prizes, as follows. For the handsomest lady, gentleman, fattest man, bald-headed man, and laziest man in the audience, according to decision of judges. Exhibition at 8 o'clock. Admittance, 50 and 25 cents. *

NARROW ESCAPE.—Last Saturday the Whitney House at Lone Pine had a narrow escape from distruction by fire. Mr. J. Stewart happened to step outside the house, when he saw a great volume of smoke pouring out from under the shingles. An alarm of fire was at once givens the hose cart run out, and the hose attached to a fire plug near the hotel. The large stream of water that was turned on alone saved the whole premises from destruction. As it was very little damage was done beyond making things rather moist. It pays to have water works in a town.

Personal Mention.

Mr. R. Hession came down from Big Pine last Monday and stayed a few days.

H. C. Hartshorn of Big Pine came down last Monday and stayed to the masquerade.

Mrs. Boland of Keeler, who has been very sick during the past few weeks, is now much better.

J. J. Moore and family have moved into town; they will soon occupy the house where Mr. Gregg now lives.

Thomas J. Furbee was in town last Wednesday, settling up some matters in connection with the sale of his property near Bishop Creek.

Pap Walker came up from Olancha last Saturday, and set the boys a very good example for a few days. Mrs. Walker accompanied her husbaad.

HAPPY CHILDREN.—The children of Lone Pine were made happy on Christmas eve. Mr. Groves and Miss Shepherd, the teachers of the school there, thought enough about their pupils to work hard and get up an entertainment for them. There was a large Christmas tree, laden with more than enough to give to every child some toy or other article, such as gives so much dellght to little ones. After the distribution of the gifts, various readings and recitations were given by the school children, and all were rendered in a way that showed how careful and diligent the teachers had been in training their scholars. Of all the festivals of the year, Christmas belongs in an especial degree to children. Santa Claus, with his reindeers and sled, his many toys, his snow-covered coat, his mysterious flight in the cold frosty air of night, dropping treasures as he flies, more precious than all that men strive for; these are not poetic fictions, but living facts to children. To the child Santa Claus is the Aurora whose coming gives a rosy luster to the wintry sky that makes it more lovely than all the year beside. The children of Lone Pine had their brightest anticipations realized, through the kind care and interest of their teachers.

THE MASQUERADE.—Many pleasant parties have been held at Independence during the season; but beyond question the masquerade on New Year's eve was the pleasantest of all. Last week it was evident that the Courthouse was the only building in town that would be large enough to afford room for the company; the use of this was very kindly granted. The Court room was packed with people, till there was but scant room for dancing. The costumes worn by the masquers were very various. Many ladies had rich and elegant dresses. Among the more conspicuous were Miss Yaney as "Art," a black dress with small pallets and pencils in brilliant colors; Miss Flowers, "Columbia," dress, stars and stripes, and helmet of same; Mrs. Conklin, "Mexican," dress, white brocaded satin, trimmed with beaded lace and cardinal silk; Mrs. Mairs, "Cleopatra," dress, brocaded plush, trimmed with beaded lace, the whole costume in brilliant colors; Miss Conklin, "Tambourine Girl," dress, black illusion, short, trimmed with black lace, played tambourine as she danced, character well sustained; Miss Katie Mulholland, "Night," dress, black satin and velvet, trimmed with spangles; Miss Maggie Dalton, "Spain," dress, red satin trimmed with black lace; this was a very handsome costume; Mrs. Vagt, "Gretchen," dress, red cashmere, trimmed with black lace; Mrs. Baxter, "Dame Durden" dress, calico, white apron; Miss Addie Lewis, "Milkmaid," dress, blue cashmere, white apron; Mrs. Gregg, "Sister of Charity," dress, costume of that order; Miss Julia Cook, "Miss Eitherway," dress, mask double, costume blue in front, drab behind; Mrs. Blair, "Bride," dress, white Swiss, lace veil; Miss Mary Mulholland, "Titania," dress, white Swiss; Miss Hattie Vagt, "Witch," dress, red cashmere, steeple-crowned hat; Mrs. Matlack, "Jennie Deans," dress, tartan—"I thocht yer honor's bert wad warm tae the tartan;" Miss Maud Cook, "Mother Hubbard," dress, pink calico. Several ladies had only plain dominoes, and a large number were present unmasked. Joe Harris, Norman Conklin and George Lewis were dressed in female costume. Joe played the part admirably, and was for a long time supposed to be a young lady of Independence. Norman danced with more vigor than ladies usually display; George did the part very well. Among the male masquers Doc Blair played the very d——l, and thereby hangs a tail. Doc Stevenson made a fine looking Hussar; Crit Hampton as a "Big Injun" whooped it up in fine style; Jacob Vagt tripped around as spry as a French dancing master; A. Clark looked every inch a Chinaman; George H. Hardy was the greatest puzzle in the crowd, his many hued dress as "Pantaloon" being a complete disguise. Irving Mulholland, in bonnet, plaid, kilt and hose, made a passable highlandman; H. C. Hamilton looked very comical in a parti-colored dress and negro mask; John Lewis would have passed for a Piute; R. English looked venerable in white hair and beard; Herb. Hartshorne looked as "cute" as "Sam Slick" himself; Jake Miller as a "Dude" made the character so ridiculous that none of the boys will want to do't again. Many more gentlemen than ladies wore only plain dominoes. About midnight the company adjourned to the Blaney House for supper, and this part of the entertainment was most creditable to Mr. and Mrs. Eldred. The large dining room was brilliantly lighted and well warmed; the tables were most tastefully arranged, and covered with a great variety of cakes and confectionery, as well as more substantial fare, including turkeys, chickens and other meats. After supper the company returned to the ball room, and continued till near the dawn one of the pleasantest parties ever held in Independence.

Mining Items,

James Stansfield found a good prospect a few days ago in Black canyon, he has put men to work to develope the claim.

Greenly and Broder resumed work on the Cliff mine about two weeks ago. The mine had been idle during the past year or more, Two sample lots of the ore, each weighing a ton, have been found to go, one fourteen and the other fifteen hundred dollars per ton.

Thomas C. Boland has leased the whole mining property at Cerro Gordo, inclubing mines and furnace. Mr. Boland will put a full force of men at work immediately, and all the old time bustle and activity is likely to be seen at Cerro Gordo before Spring opens.

The Lone Piners made the most of the holidays, two dances were running nearly every night, from christmas eve till New Year's.

The boys are easy in their minds once more, they have already gotten over the agony of making good resolutions—and then breaking them.

Mr. and Mrs. Joseph Rowan passed through Independence last Wednesday, on their way to Los Angeles, where they expect to settle. It is a cause of regret to many friends to see them leave the county.

RETURNED.—Mr. C. Hamption returned to Big Pine this morning, and will reopen the school on monday.

BIG MINING STRIKE.—What gives every indication of being a very important mining strike has lately been made in Beveridge district by Straus and Cohn of Lone Pine. A vast mass of quartz that raises above a canyon has been examined by them, and found to be very rich in gold. The quartz can be quarried from the mass in any quanity, and there is plenty of wood and water near by. Last Monday men were set to work making roads and trails supplies will be sent to the camp as soon as possible, and miners and woodchoppers begin work at once. The nearest mill is about six miles distant from the mine, there is an arastra about two miles away, and at both of these the ore will be worked for some time, to test its value fully. Messrs. Straus and Cohn have no doubt whatever as to the great value of their mine, and are already satisfied that it will pay well to build a mill close to it. The surroundings offer excellent facilities or a mill site.

FREAKISH FACTS.

Notable Occurrences of the Day that Border on the Wonderful.

AN UMBRELLA AND LION.

Gen. H. F. Sickles, the Colorado Commissioner to the New Orleans Exposition was telling some friends a few days ago about his first glimpse of a mountain lion. He said: "We were living up in the mountains, and had quite a herd of cows, among them one, an old cow, who wore a bell. The cows had been missing for several days, and the boys were out searching, and one afternoon I thought I would try and see what I could do. So I mounted a pony and rode quite a distance, when I thought I heard the old cow's bell. I dismounted and started to prowl around among the rocks and bushes.

"It had been raining during the early part of the afternoon, and I had an umbrella. I tied the pony to a tree and started. After I had gone a short distance I caught a glimpse of the cows. As I started toward them, suddenly they lifted their heads, crooked their tails, and started away on a dead run. I was just wondering what frightened them, when I heard a rustling in the bushes behind me.

"I turned around, and there, not ten feet away, was a big mountain lion standing on a rock staring at me. I assure you I never fell so bashful in all my life. I hadn't a gun or even a jack-knife, and there was that beast staring and getting ready for a spring. All at once I thought of my umbrella, and as quick as thought I raised that much-borrowed article, and spread it right in Mr. Lion's face! He didn't stop to examine, but made one great jump clear across a gorge, and as he lighted gave a yell that shook the hill.

"I saw no more of him. When I got home the cows were there.

AN AMERICAN SNAKE STORY.

An Indian went outside the town of Cherantzieurin, State of Michoacan, to look for some fuel in the mountains near by. While cutting up a dry oak he felt a bite on the calf of his leg, given in the fraction of a second. A minute later he felt coiling around his body the terrible folds of a boa constrictor. Instantly he leaned his head over toward the wounded leg, and was almost fascinated by the glare of two bright basilisk eyes that gleamed like fiery coals in the head of the serpent.

Quicker than flash the Indian ducked his head and caught the neck of the reptile in his teeth, clinging to it with the desperation of the dying. The huge serpent lashed its tail and tried to twist his head to bury his fangs in the Indian, but the latter clung on and began to chew away at the neck of the boa, which is the thinest and softest part of its anatomy. After chewing for a long time the Indian succeeded in beheading his antagonist, the folds dropped off and the Indian was free.

A SHINING TREE.

A most remarkable tree or shrub grows in a small gulch near some springs, about twelve miles north of Tuscarora, is about six or seven feet in height, with a trunk which, at its base, is three times the size of a man's wrist. It has innumerable branches and twigs, and resembles somewhat the barberry tree. Its foliage at certain seasons of the year is so luminous that it can be plainly distinguished in the darkest night for a distance of more than a mile, while in its immediate vicinity it emits sufficient light to enable a person to read the finest print. Its foliage is extremely rank, and its leaves resemble somewhat in size, shape, and color, those of the aromatic bay tree of California. The luminous property is evidently parasitic, and consists of a sort of gummy substance, which, upon being transferred by rubbing to a person's hand, imparts to it the same apparently phosphorescent light, while that on the leaf entirely disappears.

DON'T LIKE RIBBONS.

An old setler once displayed such vanity that it was immediately seized upon to campel him to obedience. He would follow the members of the family whenever they went out, no matter how troublesome his presence might be.

One day the children tied a ribbon bow on the tip of the dog's tail. Everybody laughed at his comical appearance, which so mortified the poor setler that he retired under the sofa and sulked for an hour. The next day the family were going to a croquet party and the dog seemed bent on accompanying them.

It occurred to one of the young ladies of the party to try the effect of a ribbon bow. It was tied on his tall, and immediately he rushed into the house and hid under the sofa. When they returned he was on the doorstep sitting on his hunches as if concealing something, and refrained even from wagging his tail, lest the hated bow should be seen.

IT WASN'T A TOAD.

The Eureka Sentinel says: J. P. Martin who, on his way home from the Grand Lodge, K. of P., stopped a day at Nevada Asylum, tell us of a remarkable incident that occurred there during his visit. One of the patients got possessed with the mania that a toad was trying to get down his throat. In order to keep the animal out he grasped his windpipe with his fingers, and, mistaking his Adam's apple for the intruding toad, he chocked himself nearly to death. It was with the greatest difficulty that the attendants loosened the poor creature's clutches on his own throat, and it took them hours to resuscitate him.

The postal service of the United States costs the Government this year $46,225,-000.

Summer Life in the Lebanon.

BY J. AUGUSTUS JOHNSON.

The Lebanon range is about one hundred miles in length, and has a population of gearly half a million souls, composed of different races and tribes, who now live quietly under a Christian Governor-General named by the Sultan and approved by the five great powers. It has a thousand villages and several large towns, and the four great rivers of Syria take their rise within its borders and rush down its great gorges on the west to the sea, and on the east to the Valley of Cælo-Syria and the beautiful plain of Damascus.

Lebanon was the paradise of the Hebrew poets. All writers upon the East, ancient and modern, testify that for grandeur of scenery, richness of product, and mildness of climate, it is unsurpassed among mountains. Winter rests upon its summit, autumn upon its shoulders, spring in its lap, and an eternal summer at its base.

A summer at Beirût, or in Sidon, Tyre, or other towns on the Phenician plain, between the mountain and the sea, is synonymous with sweltering stagnation. Although the thermometer seldom reaches ninety degrees in the shade, it remains at about eighty-five day and night for many months, without rain, or any refreshing breeze to brace up a debilitated system. No cloud breaks the heat or the glare of the sun, and fine dust penetrates eyes and ears, and drives one indoors for protection. On the coast there is no running water, no grass or verdure of any kind outside the diminutive flower garden where the jasmine and the oleander, with a few orange and lemon trees, outlive the half year of rainless heat. But a summer in the Lebanon is a continual spring. Innumerable fountains permit irrigation, and the hillsides, planted with the mulberry, the olive, and the vine, refresh the eye with their terraced loveliness.

Long lines of loaded mules may be seen about the first of July filing out ot Beirût, an enterprising city of about 80,000 inhabitants. Through the forest of pines that adorns its suburbs, and along the tortuous paths, these caravans move in solemn procession, at a snail-like pace. Three miles an hour is their rate of speed. Boxes are slung on the animals, and the children are balanced on either side, protected from the sun by sheets spread from projecting rods. Women, if strong, are mounted on horses; if feeble, they are carried upon the shoulders of men in covered chairs. After an inspection by the local custom-house guards, who frequently make trouble unless quieted by a few piasters, the summer visitor passes, and reaches at twilight or at early dawn his summer house, temporarily abandoned in whole or in part by its owner, at prices ranging from thirty to a hundred dollars for the four hot months. These houses are of the best, and were once the residences of old feudal chiefs, whose families reigned for centuries over these Druse and Maronite districts. The windows have iron bars and a prison-like air; the floors are of hardened mud and gravel mixed with mortar.

At Bhamdoon you may pick and eat forty varieties of grapes, as you rise from the valley to the summit, from August to October, through the vineyards of various altitudes.

The large bunches of grapes hung up in the cool stone houses often last until January, in good condition, and are much used for sweet wines. In some villages the wine-press is the gathering-place of the happy villagers, while their young men, with washed feet, tread out the sweet essence of the grape. Some families put out their grapes on shares, for the manufacture of *dibs*, which resembles honey; they transport the fuel, and take one-fourth of the product, after paying out one-tenth as the toll of the press. An immense caldron built into the masonry of the press is constantly filled from the pits or vats with grape-juice, which flows in streams from the five treadmills.

But how do the foreigners spend their time? A different answer would be necessary for each nationality, but I may describe in general terms the foreign colony in a mountain village where we spent two pleasant summers. It united many genial and yet antagonistic elements: Five foreign consuls, three missionary families, the president of a college, two physicians, and a retired English officer who had married a Syrian woman and had settled in the Lebanon. His daughter is the wife of the Emir, the hereditary governor of a dozen villages; and last, though not least, was an ex-Secretary of State of the Republic of Liberia, Professor of Latin and Greek in the college at Monrovia, but then in Syria to perfect his knowledge of Arabic. Although a full-blooded negro, he was a fine classical scholar, and of good manners, and contrasted strongly with the native Arab chiefs who occasionally visited us.

The reunions of this Frank community were frequent but not general. Music and poetry constituted the common ground on which most could meet, but in other respects there was a wide divergence in taste and character. The missionaries had good libraries, and were happy in their unselfish work, and enjoyed the respect of all; the men of the world hunted, played cards under the trees, or joined in picnics and out-of-door sports as time and opportunity served. Most of the men had written or were then writing books in their respective languages, or were devoting themselves to some special study, but all were glad to join in quoits, croquet musical reunions, riding, walking, or sketching parties. Six hours of literary, official, or professional labor gave a zest to scrambles over the hills for fossils, plants, and shells, a game in the open air, or a ride to the shore, six miles below. Sometimes we met at a mid-day meal under a great tree, where each family composing the group brought as contribution some national dish, suggesting the charm of a New England clam-bake—minus the clams. Picnics in the nooks and glens where little cascades made all things cool and green gave the children free scope, and made children of us all.

Litterings.

If a cow is troublesome milking because she kicks, the first thing to do is to find out whether the fault is the cow's or the milker's, and, if the latter, at once discharge him. The operation of milking is a relief to the cow, and if she is properly handled, quietness will result. But no cow can be expected to remain quiet when every pull at her teats results in pain. She kicks as a matter of instinct, and brutal treatment by way of punishment only makes matters worse.

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST."—Planned by HORACE GREELEY, LL. D.

All our greatest institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown University, Cornell University, Amherst, Hamilton, Rochester, Madison, University of California, etc. Thousands of our greatest schol ars have declared it to be THE BEST. It is not only the BEST CYCLOPÆDIA but is a whole library of UNIVERSAL KNOWLEDGE from the pens of the greatest scholars on earth. 2000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. R. Spofford, Librarian of Congress, Washington, D. C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the Library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL. D.

"By far the best," etc.—Hon. Alexander H. Stephens, LL. D.

"The best we have," etc.,—Hon. Wendell Phillips, LL. D.

SOLD BY SUBSCRIPTION ONLY.

For particulars to obtain or sell it, etc., address,

C. H. LIBBY,
General Manager Pacific Coast.
MARYSVILLE, - - - - CAL.

Send in your orders by mail for the holidays to Mr. Libby, as above.

HELP for working people. Send 10 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, of all ages, grandly successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed from first hour. The broad road to fortune opens before the workers absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY!

It is a never-failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhea, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.

DR. MINTIE will agree to forfeit Five Hundred Dollars for a case of this kind the VITAL RESTORATIVE (under his special advice and treatment) will not cure, or for anything impure or injurious found in it. Dr. Mintie treats all private diseases successfully without mercury. Consultation Free. Thorough Examination and Advice, including analysis of urine, $5.00. Price of Vital Restorative, $1.50 a bottle, or four times the quantity, $5.00, sent to any address upon receipt of price, or C. O. D., secure from observation, and in private name if desired, by

A. E. MINTIE, M. D.
11 Kearney Street, San Francisco.

SAMPLE BOTTLE FREE

Will be sent to any one applying by letter, stating symptoms, sex and age. Strict secrecy in regard to all business transactions.

DR. MINTIE'S KIDNEY REMEDY, NEPHRETICUM, Cures all kinds of Kidney and Bladder Complaints, Gonorrhea, Gleet, Leucorrhea. For sale by all druggists; $1.00 a bottle, six bottles for $5.00.

DR. MINTIE'S DANDELION PILLS are the best and cheapest Dyspepsia and Biliousness cure in the market. For sale by all druggists. oct25:1

Sale of Women.

This girl was being brought in by the Morocco gate on the road from the city of Morocco. She was nude, comely of face and figure, with large, dreamy, lovely eyes and streamy, long black hair. Her color was of that Olivian type which shows the red blood coursing in her veins. She was of medium height and aged sixteen years. Four old Arab "dealers," garbed in all the tinsel and glitter of the orient, guarded this girl as if she were an Amazon of strength and prowess. One old Arab in a loud voice cried out her merits and nationality as the group passed on to the center of the town. Halting, the whole party was suddenly surrounded by intending buyers, both christian and pagan. They came up to the crouching girl, pulled her arms to and fro, opened her mouth and looked at her teeth, made her stand erect and they haggled over the price. "She's worth $100," say the Arabs in one simultaneous cry, "but we'll let her go for $90 if you take her now." Our dragoman translates and tells us how she will go to Egypt and fetch $200 at first bid.

Some of these Timbuctoo girls are a pale, white complexion, and nearly all brought to this "market" have originated in Soudan. In nine cases out of ten those girls are the remnants of sacked Soudan villages, where the invading Turk, and more generally the invading Arab, destroys everything but the rising generation, which they sell at Timbuctoo or elsewhere, and then occasionally make little speculative ventures down here at Magador. In the interior of this great empire this trading is more vigorous, and some European residents, both diplomatic and civic, have bought Timbuctoo slaves cheap and often. The French slave-trader may yet come to be known outside of Morocco, together with his doings within.

Progress of Mesmerism.

Those who have read "A Strange Story"—and what admirer of Bulwer has not?—will remember the wondrous power exerted by one of the central characters over a young girl by means of a mysterious steel rod. It was something over and beyond mere mesmerism, the victim being governed from a distance, and forced to do the will of her master. That such a thing should ever be possible in real life has never, we venture to say, entered the mind of one sane man in a million. The majority regarding the book as a curious and interesting study; some read it merely because it was weirdly fascinating.

A good many years have passed since Bulwer's work was the literary sensation of the day, and there has at length come the time when even more wonderful things than it deals with are done by the mere effort of the will. If the assertions made by a correspondent of the New York Home Journal, whose letter was reproduced yesterday by a contemporary, are true, mesmerism—or, as it is styled in the correspondence, hypnotism—has been carried to a degree of perfection most astonishing. We are all familiar with the performances of the traveling mesmerism, and have been forced to admit that there was a power at work before us which we could not understand. In nine out of ten cases the mesmerist himself was equally at fault. But the Parisian doctors referred to by the correspondent mesmerize a man, tell him what to do in a year to come, and then restore him to consciousness. At the end of the year the commission is performed. The man does not know why he does that particular thing, has no recollection of ever being told to do it, but is impelled to the performance of the act by an irresistable impulse.

This may be all very well as a development of science, but it is to be hoped that the learned doctors and professionals who have carried the practice of mesmerism so far will have the goodness not to take too many pupils. It is not disagreeable by any means to make one of an audience witnessing the curious prank of "subjects" under the hands of mesmerist, but it is a very different thing indeed to know that one may stumble at any time against some man in the street whose eye, more keen than the ancient mariner's, can by a glance transform his unfortunate and unwilling "collider" into a passive slave.

Idleness begets mischief.

Died for His Master.

There were snakes then, and we had killed them. Rattlers used to come out on the ledges of rocks and lie in the hot sun. One or two had come around the mill, and I had shot one in our door yard. But we thought nothing of that. People living in the woods or in wild places get used to things that would fill them with horror in a settled country.

Well, it got along in the fall, and we begun to have chilly nights. The equinoctial gave us a big rain, and for a fortnight I had all the water I could use. Then it got dry again. One afternoon, after several days of threatening weather, it began to rain. Hour after hour the rain came down, till about nine o'clock in the evening, when it suddenly cleared off and turned cold. It was late in October, and we kept a fire burning on the hearth nights, more for the baby's sake than for our own. Our bed was parallel with the fire-place, and stood out near the middle of the room. We had an English shepherd dog named Leo, which we took with us from Massachusetts. He was a black-and-white beauty, and my wife, who had raised him, thought about as much of him as she did of the baby or I—at least, I used to tell her so. The dog was fond of me, and I made a great pet of him. He was a noble fellow, and all he wanted was for me to whistle just once, and he'd come. We let him sleep in the room at the foot of the bed. Sometimes in the morning I'd wake up before my wife, and I'd whistle just once to the dog. Up he'd come over the foot of the bed, and wake Katie by licking her face.

That night we were just going to bed when it turned cold. I threw an extra pine knot on the fire, and went to the door and looked out. I shall never forget that look, for it was the last time I ever stood there and saw stars above Skinner Hollow. I closed the door and went to bed and soon fell asleep. I slept on the side of the bed nearest the hearth, my wife slept on the further side, and the baby lay between us. For some reason I didn't sleep long, and when I waked up I couldn't get to sleep again. Finally I got out of bed and threw another knot on the fire. Leo was stretched out on the floor with his nose between his paws. He eyed me sleepily as I walked around the room, and gave me a loving look as I stooped down and patted his head. I went back to bed and fell into an uneasy sleep. All at once I wakened with a start. It must have been past midnight. I seemed to be fully awake the moment I opened my eyes, and such a sight as they rested on God grant they may never see again. I was lying on my left side facing my wife, who was lying on her right side. The baby lay on its back between. As I opened my eyes a dark object glided down from off the baby, and just then the knot burst into flames and flooded the room with light. A rattlesnake, fully five feet long, had slipped down from between my wife and myself, where it had been stretched out, presumably to get warm, and startled, no doubt, by some movement I had made in waking, had thrown itself into a coil on the bed at the baby's feet, and just opposite my knees.

Somebody asks if life is worth living. I think it is, as a general thing, but if life had many such moments as that, I should say emphatically that death was preferable. For a moment I lost my head. I did not move, fortunately, but I seemed to drift entirely out of all consciousness. For a moment only this lasted. Then my senses came back to me, and I felt that from the reaction I would probably tremble from head to foot. How I ever managed to keep my body rigid I don't know, but by an awful effort I did. I knew that to stir was death, perhaps for myself, perhaps for my boy, perhaps—my God, the thought was agony—for my wife. Outside I could hear the eaves dripping from the rain, and I could detect the sound of water running to waste over the flume. To-morrow, I thought, I'll have plenty of water again. To-morrow! Would I ever see to-morrow again? And if I did, would I not meet it alone? In spite of all I could do, a shudder ran through my body.

The snake felt it and raised its head. I could see its eyes glisten and dance in the firelight, and the bright rays glanced over the undulating coils. I could see that the snake was irritated, and I knew that it was liable to spring at any moment. Who would it strike? Either of us was within easy distance. It seemed to me that I could see the beginning of the muscular contraction which would precede the spring.

All this, of course, passed in a fraction of the time I have occupied in telling it. My wife and boy slept on. I prayed that they might not move, for if they did, I felt the snake would throw itself forward. I moved my head slightly. The snake's head again arose, and for the first time it sounded its rattle. Instantly my wife opened her eyes, and some way they rested on the snake. I could see that every vestige of color had left her face, but she did not move a muscle. Then her eyes slowly left the snake and came up to mine.

Looking back over the nearly thirty years which have elapsed since then, I can see the look in her eyes yet. We had sometimes talked about meeting death together. Now it lay between us, and in a more horrible form than we had ever dreamed of. Yet the look of perfect confidence in me which my wife's eyes almost spoke was something a man does not see more than once in a lifetime. That look seemed to say, for baby's sake, and like a flash I became as cool as I am at this moment. I could not speak, but my wife understood that she must keep perfectly quiet and jump. When the time came, slowly and with infinite care I raised my head till I could look down the bed to the floor beyond. My wife's eyes followed mine, and we both saw the dog. The hideous head of the snake swayed to and fro, and I knew that what was done must be done quickly. I looked at my wife, and she realized my plan. Her eyes filled with tears, but gave consent. With a prayer for help, I moistened my lips and gave one short, sharp whistle. The snake, I think, didn't know what to make of it, but the dog, Leo, did. As quick almost as thought, he sprang to his feet and bounded on the bed. To this day I've never been able to understand why the snake did not strike when the dog moved, but it did not. As the dog's body rose in the air, my wife caught hold of the baby's garments and rolled out of bed. I rolled out on my side, grasped my rifle, which stood at the head of the bed, and turned. The dog and the snake were rolling together on the bed. I caught sight of the snake's head, and fired, and the reptile was past doing any harm. The dog staggered off the bed to the floor, shivered, moaned once or twice, looked from my wife to myself with more love than I ever saw before or since in any animal's eyes, and died.

At the Ladies' Expense.

If your daughter is in poor health let her use the mop about the house. Nothing like home-mop-athy for a weak, young woman.—[Whitehall Times.

Belva Lockwood to dress-maker—"Oh, gracious, I don't want such a long train to my dress. I am running for President, you know, and it will be in the way."—[Texas Siftings.

The modern coachman drives his employer's horses to the halter and his employer's daughter to the altar. Or to tackle a different figure, he bridles the horses and bridals the daughter.—[Lowell Courier.

There is no better test of a woman's health than her ability to eat a hearty breakfast.—[Dr. Hammond. Except her ability to get up in the morning, start the fire and cook one.—[Philadelphia Call.

Everybody knows how the sudden cessation of a thundering band of music causes remarks to be shouted out in a tone like a locomotive whistle. The other night at a hop the band crushed out a few final bars and suddenly stopped, when the voice of a lovely little thing in pink was heard screaming at the top of her lungs: "Don't my bustle hang like a daisy?" —[Baltimore Sun.

The Average of Impoliteness.

Exterior fairness does not always mean politeness. A man took a seat among the waiting it a barber shop. There were four in the row when he came; and, after successive calls of "next" had taken them all to chairs, he arose half out of his sitting position at the word. I said to myself that there was a modest, retiring gentleman, who preferred to let ruder fellows get ahead of him than to assert his rights; and I marveled that such a fool should be able to gain so good a livelihood as was indicated by his excellent clothes and healthy skin. At length my turn came about, except that he was still there. Again he came half way to an upright posture, gazed meekly at the caller of "Next," and settled back into his seat.

"It is your turn," I said.

"And I don't thank you for telling me," he remarked, confidentially. "You've lost me a wager. I'd made a bet that I could lose my turn here ten times in succession, although half rising every time. I was counting on a high average of impoliteness, don' tyou see; and you were the ninth man. What made you fail me?"

New Jim Fiske Story.

A recent book has this story: "Jim Fisk once received by telegraph the details of a dangerous bill introduced in one of the State Legislatures. He telegraphed in reply to his informant to come on to New York at once, received him at his sumptuous quarters at the Grand Opera House, and inquired if his visitor could kill the bill. The judge thought he might. Fisk drew out a check for $5,000. The judge agreed to do what he could for so small an amount, but never took checks. Fisk smiled and got the cash, which the judge pocketed, and shook hands to go, when Fisk suddenly asked, "By the way, who it the author of that bill?" The judge replied without hesitation, "I am." "Oh!" said Fisk, with a beaming look of admiration, "I thought so. Good day."

Had Paid Him a Compliment.

"I understand," said a cow-county politician, walking into the office of the local paper the other day, revolver in hand, "I understand that you called me a liar in your baper this morning?"

"So I did, my dear sir," said the editor, calmly, "but I only said you were a campaign liar.

"Oh! is that all?" said the mollified intruder, and after tendering the molder of public opinion his fine-cut he walked peacefully out.

The international surveying party has located the boundary of Mexico and the United States 600 yards north of the old line. This throws a considerable portion of the town of Nogales on Mexican soil. Mexican law prohibits foreigners holding real estate within twenty leagues of the boundary and the Americans declare their determination to hold on to their property by force of arms if necessary. General Topete will enforce the demands of his government and compel the American occupants to relinquish their possessions. Trouble is expected.

Boots and shoes may be rendered waterproof by soaking them several hours in thick, soapy water. The explanation is that the compound forms a fatty acid within the leather, which then acquires the property of resisting the penetration of moisture.

A Dozen Years Apart.

BY BILL NYE.

The American Indian approximates nearer to what man should be—manly, physically perfect, grand in character and true to the instincts of his conscience—than any other race of beings, civilized or uncivilized. Where do we hear such noble sentiments or meet with such examples of heroism and self-sacrifice as the history of the American Indian furnishes? Where shall we go to hear again such oratory as that of Black Hawk and Logan? Certainly the records of our so-called civilization do not furnish it, and the present century is devoid of it.

They were the true children of the Great Spirit. They lived nearer to the great heart of the Creator than do their pale-faced conquerors of to-day who mourn over the lost and undone condition of the savage. Courageous, brave and the soul of honor, their cruel and awful destruction from the face of the earth is a sin of such magnitude that the relics and the people of America may well shrink from the just punishment which is sure to follow the assassination of as brave a race as ever breathed the air of Heaven.

I wrote the above seathing rebuke of the American people when I was fifteen years of age. I ran across the dissertation yesterday. As a general rule it takes a youth of fifteen years of age to arraign Congress and jerk the administration bald-headed. The less he knows about things generally, the more cheerfully will he shed information right and left.

At the time I wrote the above crude attack upon the government I had not seen any Indians, but I had read much. My blood boiled when I thought of the wrongs which our race had meted out to the red man. It was at a time when my blood was just coming to a boil that I penned the above paragraph. Ten years later I had changed my views somewhat relative to the Indian, and frankly wrote to the government of the change. When I am doing the administration an injustice, and I find it out, I go to the President candidly and say: Look here, Mr. President, I have been doing you a wrong. You were right and I was erroneous. I am not pig-headed, and stubborn. I just admit fairly that I have been hindering the administration, and I do not propose to do so any more.

So I wrote to Gen. Grant and told him that when I was fifteen years of age I wrote a composition at school in which I had arraigned the people and the administration for the course taken toward the Indian. Since that time I had seen some Indians in the mountains—at a distance—and from what I had seen of them I was led to believe that I had misjudged the people and the Executive. I told him that so far as possible I would like to repair the great wrong so done in the ardor of youth and to once more sustain the arm of the government.

He wrote me kindly and said he was glad that I was friendly with the government again, and that now he saw nothing in the way of continued national prosperity. He said he would preserve my letter in the archives as a treaty of peace between myself and the nation. He said only the day before he had observed to the Cabinet that he didn't care two cents about a war with foreign nations, but he would like to be on a peace footing with me. The people could stand outside interference better than intestine hostility. I do not know whether he meant anything personal by that or not. Probably not.

He said he remembered very well when he first heard that I had attacked the Indian policy of the United States in one of my school essays. He still called to mind the feeling of alarm and apprehension which at that time pervaded the whole country. How the checks of strong men had blanched and the Goddess of Liberty felt for her back hair and exchanged her Mother Hubbard dress for a new cast iron panoply of war and Roman hay knife. Oh, yes, he said, he remembered it as though it had been yesterday.

Having at heart the welfare of the American people as he did, he hoped that I would never attack the republic again.

And I never have. I have been friendly not only personally, but officially, for a good while. Even if I didn't agree with some of the official acts of the President I would allow him to believe that I did rather than harass him with cold, cruel and adverse criticism. The abundant success of this policy is written in the country's wonderful growth and prosperous peace.

Grains of Gold.

Love and reason seldom go together. —[De Vaga.

The tree of knowledge is not the tree of life.—[Byron.

If youth only knew and age only could.—[Lamartine.

Let us encourage the beautiful, for the useful encourages itself.—[Goethe.

Nothing is rarer in literary history than a scholar who confesses that he has been refuted in anything.—[Jean Paul.

Sober thought about one's own sober soul and its destiny is by no means a favorite occupation with men.—[Emerson.

Liberty is a privilege which carries with it high duties and grave responsibilities. The right to say what is false implies the duty of declaring that which is true. Liberty is a glorious light, but it demands duties and sacrifices greater than any which tyrrany exacts' and more is required from freemen than from slaves.—[Rev. John Cuckson.

THE BELL GARTER.

A Musical Innovation in Hosiery Becoming Fashionable.

The reporter leaned over Mr. T. D. Witt, Vice-President of the Eugene Jaccard Jewelry Company, and whispered confidentially in his ear. Mr. Witt smiled in a manner that seemed to be decidedly sarcastic, and caused the reporter to remark, "I didn't suppose there was anything in it; in fact, I was positive the report was a stupid canard." "But it isn't," said Mr. Witt, "and I smiled at the idea of your having taken at least three weeks to get on to the new idea. Catching on? No, it has caught on, and we sell every day several pairs of the tinklers. We are running short of the stock just now, but we shall have a fresh supply in a day or two. Come along and see for yourself." Mr. Witt led the reporter to a showcase, from whose depths he drew a couple of boxes, the lifting of whose lids exposed to view a collection of very handsome garters. As he lifted one of them a musical tintinabulation fell upon the reporter's ear. The ornamental affair was put under close inspection, when it was discovered that from the silken band depended a tiny silver bell, shaped like a sleigh-bell, whose every motion was accompanied by a faint but delightfully melodious tinkle. Mr. Witt, to more fully demonstrate the latest fashionable folly, unclasped the garter, fastened it in position beneath his right knee, and took a dozen steps up the aisle. As he did so the piece of metal inside the bell rattled about in lively fashion, and the musical accompaniment seemed much louder than before.

"And do you really mean to tell me that St. Louis ladies are really wearing these little bells in that—that place?" the reporter asked. Mr. Witt popped the melodious garter back into the box, and laughed heartily as he leaned upon the showcase and asked: "Why not? They are all the rage down East, especially at the gayer watering-places, and I really see no reason why the idea should not take here. There surely is no harm in a lady's adding the delight of melody to the charm of a pretty garter. If the jingle of a belt of sleigh-bells gives zest to the enjoyment of a wintry ride, surely the pleasure of a romantic moonlight stroll will be heightened by such palpitations of harmony as a pair of these pretty garter appendages will produce, and then, just fancy the mystery of the thing. Of course the sound produced when they are worn is softer than it appears to us here. It is, as it were, muffled, and floats in almost imperceptable sweetness upon the air. Of course, the companion of the lady who wears them is puzzled, and unless he possesses more than ordinary tact, he will, before he knows it, have started a somewhat embarrassing investigation of the source of the novel and incomprehensible sounds. I have known of one or two such awkward occurrences, but then, you know, almost any very original fashionable novelty has its drawbacks at the start. As soon as the bell-garter becomes better known its presence will not be named by the too eager inquisitiveness of the male companion of restricted social experience."

The gentleman then subjected to a closer scrutiny a pair of specially handsome bell garters, which had been made to the order of a Garrison avenue young lady. The hosiery itself was of beautiful design, but the golden bells which hung from them were of exquisite grace. They were about the size of a beech-nut, but were shaped in imitation of the acorn, the colors of the unripe nut being beautifully imitated in different colored gold. A chain of about an inch in length, each of whose links was a faithful copy, in miniature, of the oak leaf, ended in a pretty catch, which enabled the wearer to disengage it from the garter when necessary. "I have an idea that the young lady who ordered these doesn't want her ordinarily indulgent papa to know anything about them, as she was very particular to have me understand that she did not want them sent home or charged in her regular account. She promised to call for them and pay cash. She is an ingenious young lady. If you don't believe it you will when I explain to you why the bells have stopped ringing." Mr. Witt shook the garters about as he spoke, but, beyond the sound produced by the rattling of the oak leaf chain, nothing was heard. Then Mr. Witt showed the reporter that by the touch of a secret spring in the acorn the movable tongue inside was still. "That," said the reporter, "is to secure safety from discovery if papa should suddenly put in an unexpected appearance?" "It looks a little that way," said Mr. Witt, adding, "but don't you think it reveals a remarkable amount of ingenuity for a young lady of seventeen? If the bell garter becomes as popular as we expect, it will be worth while to take out a patent for the improvement."

She Had Been There Before.

"Charming Lucy," said an Austin gilded youth to the apple barrel of his expectation; "a kiss from your lips is heaven on earth."

"O, give us a rest."

"Have I offended thee, dearest one?"

"No, but you bore me with your lack of originality. Hundreds of men have told me that same old story until I am tired of hearing it."

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, JANUARY 10,..... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

IN Nebraska farmers are burning corn for fuel. Coal is worth there twenty-two cents a bushel, and corn does not find a ready sale for more than twenty cents a bushel! it is found ii is cheaper to burn the corn than to sell it and buy corl. To day here in Owens valley, corn is worth two cents a pound. Do any of our farmers want to sell out and go to Nebraska?

AT St. Paul, Minnesotta, last week the thermometer marked 36 degrees below zero. At other points in the state a temperature of 55 degrees below zero is reported. Let the Inyoites think of such terrible cold as that before grumbling when the mercury gets down near the freezing point, and that too after sunset. From Oregon also came reports of very cold weather. The mercury in Umatilla county was from twenty to tweny-five degrees below zero. One stock-owner in Portland, who had 900 cattle near Echo, Umatilla county, received a telegram that 700 were killed by the cold. Here in Owens valley newly dropped calves are running in perfect safety with the cattle on the pasture.

THE Legislature of Nevada met and organized last Monday. E. T. George, of Lander county, was elected Speaker of the Assembly. In the Senate Mr. Dennis, of Elko, offered a joint resolution that the Legislature adjourn *sine die* on Monday, the 26th day of January. He expressed it as his belief that three weeks were amply sufficient for the transaction of all the business for which they had assembled. An amendment was offered, "provided that the General Appropriation and Deficiency bills shall have become laws." With this amendment the resolution was adopted. In the Assembly a resolution was adopted that the Legislature adjourn within forty days. A joint resolution was adopted to address a memorial to Congress on the subject of silver coinage. On next Wednesday an election will be held for United States Senator.

THE Legislature of California met last Monday. Lieutenant Governor Daggett ordered the calling of the roll of the new Senators. This was the end of the proposed scheme for defeating the expressed will of the people. The contest for a seat in the United States Senate is likely to be a hot one. Of the three most talked of candidates, Perkins, Sargeant and Estee, it is very doubtful whether any one of them can be elected. Mr. Stanford is named as a candidate, but his election would be so very much of a surprise that it need hardly be considered possible. It may well be doubted, however, whether any other could be chosen who could and would serve the State so well as he. It is possible that the man who will be elected Senator has not yet been publicly named, and that the final choice of the Legislature may be even a greater surprise than would be the election of Mr. Stanford.

INYO.

Great Increase of Wealth Among the People.

In a summary sketch of all the counties of this State, published in the San Francisco Chronicle of January 1st the the following is said of Inyo county. "During the year 1884 Inyo county has made substantial progress. The assessed value of property in the county shows an increase of $152,057 over that of 1883. Part of this is due to increased acreage of land brought under cultivation, and part to the development of borax deposits in the southern part of the county. The population has not increased more than 100 during the year. The increased value of property would, therefore, indicate a marked improvement in the condition of the people. Other facts confirm this. Mortgages have been reduced or canceled altogether; new buildings have been erected and old ones improved, a great deal of fencing, tree planting and ditching has been done, and a general air of improvement is noticeable, particularly in the neighborhood of Bishop Creek. Formerly the distance of the country from any railroad was a complete bar to settlement; now the Carson and Colorado Railroad has seventy five miles of track within the limits of Inyo. The country has inducements for settlers that, when better known, cannot fail to attract a large number of people. In Owens valley alone are not less than 300,000 acres of fine land open for settlement. Owens river would easily supply water enough to supply double that area of land; this valley is well suited to grape culture. Figs attain perfection in the southern part of the county. As a stock country, Inyo has no superior. The winters are mild; very little snow falls in the valley. Cattle run out all winter and do well. These advantages are attracting the attention of capitalists, who are quietly buying up large tracts of land. It would be much better for the county and the State to have this fine land occupied in small farms. There has been some revival of the mining industry during the year that promises increased prosperity. But the future prosperity of Inyo is assured from her great extent of fertile land, abundance of water for irrigation purposes and delightful climate.

SPONGES.

A Place Where "Sponges" is the Regular and Congenial Business.

There is no single industry of so much financial importance to Nassau, I think, as the sponge fisheries. "Sponging" is a regular business in Nassau, of such large proportions that a Sponge Exchange has been established, governed by rules on the plan of the Stock Exchange; and to do a sponge business successful in Nassau a firm must be represented in the Exchange. Sponge is an important thing in Nassau. It is plenty, of course, and cheap. You see sponges lying in the streets and kicking about the wharves that in New York we would have to pay fifty sents or $1 for. Wherever sponge can be used in place of cotton or woolen cloths it is used. Kitchen maids use sponges for "dishcloths," and frequently the seat in a boat is nothing but an immense sponge as big as half a barrel. Windows are invariably washed with them, glasses polished with them, and they are used for almost every conceivable purpose. Around the hotel in the winter are always two or three "boys" with long strings of them, trying to sell them to the Americans. Hardly any visitor leaves Nassau without taking a box of them along. I bought a string of about fifteen sponges, that stretched out far higher than my head, for "one-and-six," or thirty-seven and a half cents. They make very fine presents to give to your friends when you get home, they are so cheap, and a sponge is more valuable when you know it has just been brought by somebody you know from the sponge fisheries. Some of the servants about the hotel understands the knack of pressing sponges, and for a trifling consideration will take a bushel of sponge and pack it in a cigar box.

The sponging fleet is composed of small schooners ranging from ten to forty tons. Each schooner carries from four to six men, and makes periodical trips out to the sponge beds around Abaco, Adros Island and Exuma. The men do not dive for them, as sponge fishers in the Mediterranean do, but use long-handled things like oyster tongs to fish them out of the water. In this clear water they can see every inch of the bottom, make up their minds what sponges to take, and seize hold of one carefully, detach it from the rock to which it clings, and lift it into the boat. They are not the nice, delicate, light-colored things we see in shop windows. When taken first from the water they look and feel more like a piece of raw liver than anything else I can compare them with. They are slippery, slimy, ugly and smell bad. Their color is generally a brown, very much like the color of gulf weed, only a little darker. Most people are taught, in their days of freshness and innocence, that the sponge is an animal, and when they visit Nassau they expect perhaps to see sponges swimming about the harbor, if indeed they do not surprise some of the more athletic ones climbing trees or making little excursions over the hills. But they are disappointed when they learn that the animal part disappears entirely long before the sponge reaches a market; and that the part we use for mopping up fluids is only his house, the many-roomed residence in which he sheltered himself while at sea. After the sponges reach the deck of the vessel they are cleaned and dried and go through a curing process. They then become the sponges of commerce, and are divided into eight varieties in the Bahamas. Some, called "lambswool," or sheepswool," are as fine and soft as silk and very strong. Others, although large and perhaps tough, are coarse and comparatively worthless. There are, too, bouquet sponges, silk sponges, wire sponges, and finger and glove sponges. The process for curing them, I believe, is to keep them on deck for two or three days, which "kills" them. Then they are put in a crawl and kept there from eight to ten days, and are afterward cleaned and bleached in the sun on the beach. When they reach Nassau the roots are cut off, and the sponges are trimmed and dressed for exportation.

It used to be the custom in days that are past to mail a letter in the pocket of a friend who was going to that part of the country where the correspondent lived, thereby saving the not inconsiderable sum of six pence, as in those days postage was high. It was also customary to write on the letter in one corner, "Favored by Mr. Smith," or, "Politeness of Mr. Smith." With cheap postage and rapid transit the habit of sending letters in this way fell into disuse, and the only letter now sent by hand is the one of introduction, which is left unsealed. Should it happen that a letter of personal interest be given to a friend for other parties, it is proper to seal it, and the custom of acknowledging the bearer on the outside is dropped, although a conservative girl of the day recently sent such a letter and wrote on one corner, beneath the superscription, "Politeness of Mr. Smith." When her mother saw the letter, she remarked: "That is an old-fashioned custom of acknowledging politeness."

"Well," said the girl, quickly, "politeness is an old fashioned custom, too."

Nothing more was said.

Fans are going out, and scent bottles coming in. The long, slender, cut-glass bottle filled with salts of ammonia and suspended at the waist by a chain or ribbon is the modern fashion, but any young lady who inherits one of the old style vinaigrettes or smelling-salts of her grandmother, will find herself regarded with polite envy by the possessors of the more modern article. The habit of fainting may be revived with other old time luxuries, but it has hitherto been almost impossible to frighten the modern girl into a swoon. The scent bottle, however, will furnish employment for pretty hands. That is more particularly its present mission.

There is more information to be got in an ordinary three-cent newspaper than in a dozen lectures.

TREATMENT OF CHOLERA.

Hygienic Virtues Which are Ascribed to Ice and Copper.

Cholera certainly does not let those on whom it lays hold down easy into the grave. The terrors of death do not exist for those who live to a ripe old age, or who die of some wasting disease; but in cholera there are what the French term *les affres de la mort*, so long as vital energy exists, and when that becomes extinct the patient has but one wish—to be done with life as soon as possible. The feeling that arises at this stage is like the one produced by severe and long-continued sea-sickness. One is weak, stupid, giddy, convulsed, and every minute seems an eternity. The blood being of the consistency of currant jelly, the patient is everywhere sensible of the cold hand of death. It is no use trying to breathe. Each inhalation enables the microbes (which, if they are not the cause, are a consequence of the disease) to pullulate in veins and arteries. They are greedy of oxygen, although were it to play freely on them it would consume them like a burning fire. Nostrums and panaceas have not so good a chance in France as in England and the United States, unless recommended by a prince of science. Paul Bert favors the protective system of Dr Burq. This is the philosophy of his treatment: Salts of copper poison the microbes which swarm in a human being attacked with cholera or a zymotic disease. These salts remain for some time in the system, and particularly in the liver, and are innocuous unless taken in large doses. The person whose liver is saturated with copper may defy cholera. Burq protected a whole ward full of patients in a hospital in which the wards directed by other physicians were being decimated by the Asiatic scourge. In 1865 he slyly exposed a number of artificers in brass, employed in watch factories near Montbeliard, to cholera. Not one of them took it. Claude Bernard was converted to his system after these tests.

Dr. Chapman had an original way of treating cholera, as well as nervous diseases and sea-sickness—by the application of ice to the spine. I believe in being so treated when the fever of life in Paris has overtaxed vital energy. Let any one who feels limp and out of sorts go to some hilly place where there are woods to fill the air with oxygen, and there sit in a sunny spot with a narrow bag of ice on the spine. The chest will expand, and the lungs put forth all their power to inhale. If there be a microbe in the system (so copiously is oxygen let in), it must almost directly be burned up. The sense of vitality is so great that one is under the delusion of being youthful again. A gentle warmth pervades all the body; the sky looks bluer, the trees greener; one is more alive to the exuberant joy of the song-bird, to the brightness of the flowers, to the fragrance of the country; and if the coarsest fare were served at the next meal, so sweet would it taste that one would feel inclined to say grace after meat in a hearty spirit. My advice to fashionable women is to drop morphine and betake them in rural solitude to this ice treatment.—*London Truth.*

What is an Insect?

The authors are divided as to what constitutes an insect, but, with few exceptions, it is now agreed that an insect is a living creature, having six legs, generally having wings, three distinct parts of the body, the head, the thorax and the abdomen, breathing through apertures along the side of the body, and having four different stages of existence—the larvæ, the pupa and the imago or perfect insect. Generally insects in one stage of their existence live on very different food from that which supports them in another, and the fact shows a very wonderful instinct or intelligence in the parent insect in knowing where the eggs are to be deposited. A mistake is never made. The eggs sometimes hatch in a few hours, sometimes in a few days or weeks and occasionally not for years, but they are always deposited under conditions favorable to their development, no matter when this may be. It is also to be observed that the eggs of insects which are not to hatch till the next spring are never fastened to the leaves or other perishable parts of trees, but to the bark, and usually secured by a sort of glue that will commonly resist rain and moisture. The larvæ is so called from a Latin word meaning musk, hence in this state the insect is so unlike its perfect form that it may be said to be masked. The larvæ of the insects are seldom distinguished from other worms, but after passing a certain time in this stage the grub spins a cocoon for itself of silk and enters its third condition, the pupa, from a Latin word meaning an infant rolled in bandages after the manner of the Romans, or also called chrysalis from the Greek word for gold, as some of them have gold-like markings. Insects are classed in seven orders. The first is the hymenoptera, comprising the wasp, ants and other which manifest a high order of intelligence. The coleoptera comprise those insects which have a shield on their wings, and also many of the most injurious insects known, such as borers. The lepidoptera number all the butterflies and moths in their list, while the hemiptera, or half-winged, include such as the chinch-bug, the bed-bug and a number of others equally objectionable. The diptera have but two wings, such as the house-fly; the orthoptera have straight wings, as locusts, crickets, and the neuropetra, or nervewinged, are those whose wings are so interwoven with strong fibers as to present the appearance of bony interlacing.

Blaine's Delicate Reproof.

During a debate in Congress some years ago Blaine lost his temper. After the discussion was over an Illinois Congressman said to him:—

"Mr. Blaine, I am not very well acquainted with you, and so I cannot speak as freely as I would to an old friend, but I feel that I ought to tell you that you made a —— fool of yourself yesterday."

Blaine answered with a sigh: "I am afraid I did forget myself."

Then breaking into a chuckle, he added: "What kind of language do you use when reproving a man with whom you consider yours if thoughtly intimate."—*Texas Siftings.*

"MOUNTAIN OF PITY."

The Great National Pawnshop of Mexico Founded in 1775.

Everybody who knows much about Mexico has heard of Senor Don Pedro Romero de Terreros, the first Count of Regla—who was plain Peter Terreros until a lucky mining adventure made him one of the richest men of the last century. Peter Terreros, a shop-keeper of limited means, conceived what was at first considered the wildest of ideas, viz, to drain the abandoned Real del Monte by means of a tunnel through the solid rock a mile and a quarter long from the level of the stream till it should strike the Santa Brigada shaft. He toiled with varying success from 1750 to 1763, when he struck a marvelous bonanza which for the next twelve years yielded an amount of silver that in our day would appear fabulous. Plain Peter became a Count, so wealthy that he furnished the people with more tables than Cræsus of old.

He it was who founded the celebrated Monte de Piedad in the City of Mexico—one of the most beneficent institutions in the world—and in the year 1775 endowed it with $300,000. The name Monte de Piedad, means literally a "Mountain of Pity"—and was not misapplied, for more than 100 years this national pawn shop was a sure protection to the public from the ruinous extortions of usurers, by whom, no doubt, Peter Terreros had suffered in his days of obscurity. It was sumptuously regulated and protected by the government, and was intended solely to assist the needy in times of temporary embarrassment by lending money, on liberal terms and at reasonable rates of interest, on deposits of jewelry, plate, merchandise, and other movable articles. Alike in peace and war, and through changing forms of government, its honor was held sacred and the trusts unmolested during the revolutions and overturnings that devastated the country. It is estimated that for a period of 109 years it afforded assistance to more than 200 people daily. As early as 1836, official records show that up to that time it had given aid to 2,232,611 applicants, and has distributed $31,674,701, besides having given $132,746 in alms alone. It was ruled by a general board of directors, who received the pledges. These articles were appraised at a fair valuation, the full amount of which (deducting the interest) was immediately paid to the pawner. The articles were retained six months, during which time the owner was allowed to withdraw them upon refunding the sum advanced. If the debt was not paid at the end of that time, the pledges were disposed of at public sale, and if they brought more under the hammer than the original valuation, the difference was refunded to the owner, a proceeding not much like the business principles of our Chatham street "uncles!" The Monte de Piedad occupies a palace built by Cortez opposite the great cathedral, and is one of the most interesting places at the capital. Every species of garment may be seen there, from the tattered rebozo of the leperа to the lace mantilla of the noble dame; from the blanket of the beggar to the military cloak and jeweled sword of the impoverished officer. Some of the most splendid table services of silver and gold I ever saw are crowded into the plate-rooms, and as for jewels—Aladdin would have considered his fabled palace a poor affair compared to the caskets of blazing diamonds and every known precious stone, for the magnificence of which Mexican ladies are proverbial. In the year 1880, having an available fund of $1,000,000 and unimpeachable credit, the directors of Monte de Piedad determined to increase its capacities for usefulness by adding to its pawnbroking business the operations of a banking establishment. Under the new charter then obtained it was authorized to issue notes of circulation, called certificates, of denominations from $1 to $1,000. These notes were issued only from the mother bank, and were redeemable there or at any of its branches in silver coin. They were also receivable for Federal taxes, duties and for all local imports in the federal district and in several States of the Republic. The Monte de Piedad had eight branches in the City of Mexico, and had recently established others in various cities. The amount of its paper in circulation was not publicly known, as no reports were published; but its honor was considered like that of old Cæsar's wife—till one fine morning people woke up to find its doors closed and a bewildered crowd clamoring in vain outside! Nothing is sacred in these days that can bring gold to the coffers of the President and his advisors—not even the benificent institution which had prevented so much disgrace and misery through a century of revolutionary difficulties, and it was utterly ruined by a demand from the government upon it for more money than its treasury contained. It still carries on a limited pawn business, but is so crippled and impoverished as to be little like the old "Mountain of Pity."

A Pavement That Will Last.

London and Paris say that they have at last solved this problem. After experimenting with wooden pavements for years, the English capital gave them up as a failure. About ten years ago, however, it tried a new system of wooden pavements—or, rather, a combination of wood and stone—which did very well. The stone foundation was made of concrete, cement, gravel and sand, and stretched in an arch from curb to curb, readily supporting the traffic that rolled over it. Wooden blocks were laid upon this as a cushion for the horses' feet and the ears of the public, and held together by asphalt. The new pavement gradually won its way to popular favor in London, and is now essentially the pavement of that city. In the last ten years fifty-three miles of it have been laid, all of which is in good condition, and gives complete satisfaction. Indeed, London is so enthusiastic over it that all of its streets are to be thus paved.

A FEW ignorant fanatics proclaimed that the world wss to be destroyed last Monday. A similar prediction has been made several times, and formerly such predictions were dreaded by thousands. Knowledge dispells belief and fear in connection with all kinds of predictions, except such as are based upon the unchangeable cause of nature. The knowledge of one secret of nature is worth more than familarity with all the predictions of a supernatural character ever spoken or written, and the explanation of one natural phenomenon is of more value than all the "interpretations" ever given of "prophecies." Knowledge elevates human nature, superstition degrades it. The mind, the soul, the consciousness of him who looks intelligently at nature are filled with unutterable admiration for the great "First Cause;" the ignorant fanatic grovels in contemptible abasement before the monsterous imaginings of his own dark fancy. Predictions of the "end of the world" are not worth notice, and will soon cease to receive it.

LIVERY STABLES.

ORDER TO SHOW CAUSE ON APPLICATION OF GUARDIAN FOR ORDER OF SALE OF REAL ESTATE.

IN THE MATTER OF THE ESTATE AND Guardianship of Jeannette Lewis.

It appearing to this Court from the petition this day presented and filed by W. R. Tibbetts, the guardian of the person and estate of Jeannette Lewis, a minor, praying for an order of sale of certain real estate belonging to his said ward, that it is for the best interest of said ward and necessary that said real estate should be sold.

It is hereby ordered that the next of kin of said ward and all persons interested in said estate, appear before this Court on Wednesday, the fourth day of February, A D 1885, at ten o'clock a. m., at the court room of this Court, at the town of Independence in the county of Inyo, then and there to show cause why an order saould not be granted for the sale of such estate

And it is further ordered, that a copy of this order be published at least three successive weeks before the said day of hearing, in the Inyo Independent, a newspaper printed and published in said County of Inyo.

Dated December 41, 1884.

JOHN A. HANNA, Superior Judge.

State of California, } ss
County of Inyo, }

I, THOMAS CROUGH, County Clerk of the County Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing copy of an order to show cause on application of Guardian to sell real estate is true and correct as the same remains in this office.

In witness whereof, I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo, this 31st day of December, 1884.

SEAL.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 10,.....1885.

—H. H. Penoyer, Superintendent of the Gould and Curry mine at Virginia City, died suddenly of heart disease on last Friday morning.

—It is reported that the long talked of signal Service Station is about to be established at Owens lake. This probably means on Mount Whitney.

—Mike Murphy, a miner, was shot at Aurora last week. His partner, Tom Keith, known as "Tex" is accused of the crime. The wound is expected to prove fatal.

—At the last regular meeeing of Inyo Lodge, No 301, I. O. O. F. the following were installed officers to serve during the present term. J. R. Eldred N. G.; J. E. Shepherd V. G.; J. D. Blair Treas, E. Robinson, Sec.

—The Bodie *Free Press* has entered upon its eleventh volume. The *Free Press* is a good local paper, and worth to the people of Mono every dollar it costs them to support it, and they do support it liberally.

DIED.— A man named Philip Pirman died at Keeler on Friday, December 12, 1884. He was a native of Germany, aged 37 years.

HIS FIRST DUTY.—On taking office last Monday, the first duty of Sheriff McGee was to arrest two hogs for rooting in the Court house yard. The hogs escaped.

ROLL OF HONOR.—Following is the roll of honor at the Bishop Station school for the month of December. 1st Division: Willie Dehy, 98; Hattie Man, 95; Appleton Pumley, 95; John Dehy, 96. 2d Division: Bartheria Wheaton, 87; Estella Man, 87; Franklin Huckaby, 89; James Dehy, 89. The scholars attend school regularly and advance rapidly.

MINNIE THOMSON, Teacher.

CERRO GORDO.—Mr. Boland has made an examination of the mines at Cerro Gordo and finds the old workings badly caved, especially the Union Tunnel. It will take some time and a good deal of labor to put the mines in a condition for getting out ore again. The work will be pushed ahead as rapidly as possible, however. A mistake was made in stating that Mr. Boland had leased the furnaces; his lease covers but the right to work the mines.

Farewell.

The pain of parting from dear friends is partly cured, if entirely caused, by the knowledge that they do hold us dear. The large attendance and the feeling shown at the party given Mr. and Mrs. Gregg on last Thursday evening were ample proof of the high regard in which they are held in this community, and remembrance of the occasion will be sure to afford pleasure as often as it is thought of or alluded to by them in future years. The Court House was filled by the company at an early hour of the evening. In a few feeling words Miss Northrup presented Mrs. Gregg with a handsome set of majolica ware as a token of regard from the young people of Independence. Dancing was then continued until after 11 o'clock when supper was announced. This was served in a large room adjoining the Court room; it was gotten up by the ladies of Independence, and it is hardly necessary to say was well worthy the occasion. The quantity would have served a multitude and the quality and variety please the most exacting or various tastes. After supper dancing was resumed and continued until jocund morn stood tiptoe on the misty mountain tops, when the pleasures of meeting and the pains of parting were soon forgotten in the embrace of tired nature's sweet restorer, balmy sleep.

Superintendent's Convention.

SACRAMENTO, Jan. 3, 1885

Inyo Independent:— In response to the call of State Superintendent Welcker the Convention of County School Superintendents met in the State Senate Chamber on Friday at 10 o'clock a. m. About forty of the fifty-two counties in the State are represented. Most of the members of the Convention are school teachers, and over half the number are quite young men, your humble servant being the youngest. The Senate chamber is a large, airy, echoing room. Behind and high above the seat of the presiding officer, is a life sized portrait of Washington, under which is the legend, "*Senatoris est Civitatis, Libertatern Tueri.*" Mr. Welcker is President of this Convention; Charles S. Smyth, of Sonora, is Vice-President; H. Murphy, of Tulare, John W. Linscott, of Santa Cruz and Charles H. Groves, of Inyo, are the Clerks. The members of the Convention are earnest in the purpose and the work is going forward rapidly. The business of the Convention is to propose amendments to the State School Law. The most important resolutions adopted thus far are the following:

1.—To abolish entirely all educational monthly journals as the official organs of the Department of Public Instruction, all official business from the State Superintendent to be published in the form of bulletins.

2.—County Superintendents to appoint members of the Board of Education, subject to the ratification of the Board of Supervisors.

At the invitation of Mrs. Crocker the members of the Convention visited the art gallery and museum at her mansion.

The approaching meeting of the Legislature on Monday makes Sacramento quite lively at present. The Convention of Superintendents will probably adjourn this evening. The members are satisfied with their work.

THE WORLD'S FAIR.

[SPECIAL CORRESPONDENCE.]

NEW ORLEANS, Dec. 29, 1884.

Christmas in New Orleans was ushered in with a multitude of tin horns, the usual powder burning and all variety of pranks for which young America is noted. And while there was no snow, the skies were overcast, the air damp and chilly, and blazing fires and heavy overcoats were very enjoyable. The day was largely celebrated by an adult class with "glass horns," for which the chilly atmosphere created an unusual demand, though there was little or no evidence of intemperance on the streets nor in the public resorts.

While many hundreds of Exhibits are already up, possibly thousands, it may surprise the reader, as it did your correspondent, to learn that many hundreds are yet incomplete, and very many are yet to arrive; and this is not only true of private but also of Government and State Exhibits, and fully a month must elapse before the vast enterprise will be in comptete running order, so that the intending visitor will loose nothing by postponing his trip for thirty days, but will be the gainer by doing so. In the meantime grumbling and friction, inevitable at the inauguration of all great events, prevails in this case. It would be a thankless, and perhaps a useless task, to attempt to locate the cause or causes of so much conflict, friction and confusion. Much of it doubtless results from delay in forwarding exhibits; some from lack of rapid and plentiful transportation, and some from unavoidable mistakes in the management. But in a short time, your correspondent believes that all grounds of complaint will have disappeared, and the great Exposition will present a scene of peaceful and multiform interest never before witnessed in the world's history, and that its result will surpass the wildest dreams of its projectors.

It may be well to remind such of your readers as intend to visit the Exposition that on arrival here they will find plenty of lodging room from 25 cents to one dollar per day, and as for boarding it can be had at any price "under the sun," and in every variety, from a ham sandwich to an elaborate and luxurious banquet. Gravier street, has a department entirely occupied in directing strangers where to find accommodations, and as the information is free and reliable, it is well to call there. Have your mail directed to "Exposition Postoffice," New Orleans, La., as there is much liability of its being lost in the rush, if coming only to the general office is the city. Bring umbrellas, overcoats, and if convenient a blanket with you; a parasol and straw hat will also be useful on odd days.

Extending to you the compliment of the season, and trusting we may have many pleasant meetings during the next six months, while portraying the Exposition and the objects of interest in the great Southern Metropolis, for the present, adieu.

DESTRUCTIVE FIRE.—Last Tuesday night there was a very destructive fire at Benton. Watterson Bros., John J. Lynch, T. G. Kelty, William H. Hall and John Creaser were all burned out. The loss was total, the fire spreading so rapidly that nothing of any consequence could be saved. The Watterson Brothers have many friends in Owens Valley who will regret exceedingly to know of their loss. The amount of insurance on the property destroyed has not been stated.

CUTTINGS AND SCIONS.—Many valuable cuttings and scions can be supplied from the State University at Berkley. Among the cuttings are some from the *Huasco grape*, from Chile, producing the splindid raisins exported from that country. A circular issued from the University says:

Pears. These were here, as elsewhere in the State, this season strongly affected by blight. The following remained almost exempt from this disease: Duchesse Precoce*, Doyende Robin, Jalousie de Fonteney, Paradis d'Automne, Marie Louise d'Uccles, Sheldon*, Duchesse d'Orleans, Swan's Orange, Beurre Bosc*, Conseiller de la Cour,* Louis Vilmorin, Pitmaston Duchesse,* Duyenne D'Alencon.* Of these, those starred* are specially recommended as worthy of trial.

The following were or less affected: Brandywine, Beurre Sterckman, Gratiola of Jereey,* D e Tongres,* Fulton, Baronne de Mellow,* Jones, Seedling, Gray Doyenne, St. Germain.*

Many other good varietios, such as Andre Desportes, St. Michael, Archangel, Napoleon III, Rutter, Figue d'Alencon, etc., we.e so badly affected, that it seems undesirable to distribute scions from them until the prevention of the blight disease shall have been better studied.

Plums. Of these, the following are recommended for trial: Black Morocco, Ontario, Wangenheim Prune, Prince of Wales.

Apricots. Blenheim, Alberge De Montagamet, Purple, Katsha, Canino Grosso, De Coulorge, Beuge, are among the less known varieties worthy of trial in this State, and of which scions can be sent.

Plants will be forwarded by express, scions by mail (unless specially otherwise requested), in lots consisting of the number hereinafter mentioned for each kind, on remittance of 25 cents for each lot of plants, and 10 cents additional lot, to pay expenses of packing, etc. For scions, send ten cents for postage on each dozen called for. Postal notes, payable at the Berkeley postoffice, are requested to be sent in lieu of stamps whenever practicable. Any surplus left after filling orders as far as possible will be returned to the senders, deducting letter postage.

Address applications to

E. W. Hilgard,
University Of California, Berkeley.

Personal Mention.

Miss Eva Shepherd visited in town several days this week.

Miss McCall and Miss Tynan were up from Lone Pine last Monday.

Miss Lena Thomson went to Bishop Creek last Tuesday on a two weeks visit.

James Stansfield came over from Deep Springs last Monday; he is quite pleased with his mining prospect over there.

Charley Begole came up from Lone Pine last Saturday, and qualified again under his reappointment of Notary Public.

W. J. Symmes has gone on a visit to his place in Santa Clara county; he will set out a large number of fruit trees during his stay.

Mr. and Mrs. Conklin and all of their family left Independence last Tuesday morning for Sacramento. The duration of their absence from home is uncertain.

SIGN EVERY BODY.—Petitions for an amendment to the county Governments bill have been printed and distributed for signatures. The amendment asked for applies only to reduction of salaries of Inyo county officers. Every tax payer in the county should make sure to have his signature placed to this petition, and with as little delay as possible.

CARD OF THANKS.—To the many friends who so kindly entertained us on last Thursday evening, and from whom we are about to part, we tender our most heartfelt and grateful acknowledgements. The many tokens and expressions of friendship tendered us on that occasion will be cherished among our most agreeable recollections, and at our old home, to which we are about to return, should any of those friedds visit us, they will at all times find the latch string hanging out, and to welcome them there will afford us a pleasure equalled only in intensity by the regret we now experience in parting from them.

S. G. GREGG AND WIFE.

DIED

SCOTT—At Lone Pine, January 5 1885, Hugh Scott, a native of Kingston Canada, aged 24 years 11 months and 16 days.

—The deceased was brother to Walter Scott, agent at the Lone Pine station, and had been but a short time in the place.

NEW ADVERTISEMENTS

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARK, AN INSOLVENT DEBTOR

JOHN CLARK HAVING FILED IN THIS Court his petition schedule, and inventory in insolvency, by which it appears that he is an Insolvent debtor, the said John Clark is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clark, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation or association for his use. The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered. It is further ordered that all creditors of said debtor be and appear before the Hon. John A. Hannah, Judge of the Superior Court, of the county of Inyo, in open Court, at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed

JOHN A. HANNAH,

SATURDAY, JANUARY 10,.....1885.

A Promiscuous Sufferer.

The other day a forlorn looking tramp, with scarcely enough clothes on his gaunt frame to wad a shot-gun, shuffled up to a bar on Third street and said to the barkeeper:

"Pardner, after a man has lost all he had in a cyclone, and—"

"Oh! that's too thin," interrupted the mixologist, "cyclone sufferers are as thick as bees up this way."

"You guess too hastily, pardner. I was jest goin' to tell you a little cyclone story. To be honest with you, though my once princely wealth war' all swept away when the roarin', red-tongued fire fiend swept the noble city of Chicago from—"

"You'd better take a stroll. The Chicago sufferer racket was worked out long ago."

"Mebbe it was, pard; mebbe it was; but, say, you can never imagine our dreadful sufferin's when we war' driven from our rooms into the freezin' air when the Newhall house—"

"Oh, give your jaws a rest! I've had more than a hundred Newhall survivors here this summer. Come, now, amble off."

"In a moment, pardner, in a moment. Honestly, don't you think it actually criminal for the railroads to draw us west with stories o' fabulous riches in the Cœur d'Alene mines, and when we've spent the last dollar of a princely boodle, make us walk back again?"

"I don't want to hear another word. You can't get a drink here unless you put up for it, and now git!"

"Just one word more, pardner, and I will hie me hence. (Lowering his voice almost to a whisper.) Do you believe the horrible story published in the papers that afore our rescue we feasted on the dead bodies of our comrades? Do you believe what Greely says about—"

"Cut that short right there. No survivor of the Greely expedition is in want. I'll be around there with a bung starter in just a minute if you don't git out of here!"

"Yes, pardner, I'll go—but let's recapitulate just a moment. Cyclone sufferin' fails to perduce the budge, eh?"

"It does."

"An' misfortune brought about by the Chicago fire fails to lure the coveted bottle from its lair?"

"Just so."

"An' the story of a poor Newhall house victim is not sufficiently touchin' to cause the rejuvenatin' fluid to heave in sight?"

"It is not."

"An' a Cœur d'Alene unfortunate can't booze up at this drunk factory without cash?"

"He can not."

"An a man that suffered cold, privation and hunger for the advancement o' science almost under the shadow of the north pole can't moisten his tonsils here unless he backs the call with legel tender?"

"That's just the size of it."

"Then mix me a good cocktail an' take yer change out of this," and he threw a twenty-dollar gold piece on the bar. "A man that's suffered as I've suffered should be lent a helpin' hand by the great American people, but I'd rather pay cash than buck agin hardness o' heart an' petrified generosity. Put a little pine apple in it, an' make 'er stiff."

Novel Marriage Customs.

The people now living in the Northern Turkestan steppes consist, for the most part, of a Turkish race generally called Kirghese, of which the two sections are the Kara-Kirghese living in the mountains of the South, whilst the Kirghese of the plains call themselves Kazaks. The manifold circumstances connected with marriage among the Kirghese are somewhat formidable, and involve the payment of a kalim besides the giving of various presents. The adair is arranged as to its preliminaries by matchmakers, and the bridegroom after bethrothal has sometimes to wait for a year or more until he can bring tne remaining portion of the kalim. If during this period the betrothed girl should die, her parents are bound to give their next daughter, or in default, to return the kalim and pay also a fine of one or two horses and robes or furs. So also is it if the girl should refuse to marry, which she may do on account of the suitor's ill health, or his poverty, or (in some localities) her personal dislike. Yet another custom is that if the bridegroom die or refuse to marry the girl, his parents are bound to take her for their next son, paying a fine, usually a camel, in case of refusal. When the prescribed period of betrothal is at an end, the bridegroom, dressed and mounted at his best, goes with his friends to the aul or village of the bride, where the tent has been prepared for his rsception. Throughout the ceremonies of betrothal the bride's brother has the right of pilfering from the bridegroom whatever he pleases; but now the bride's relations come and take as presents almost everything he has—his coat, hat, girdle, horse, and saddle, saying each one that they are for the education of the bride—a seizure that is afterwards repaid by the relations of the bridegroom on the visit to their aul of the relations of the bride. The bride's parents are bound to give up the bride when the kalim is paid, giving her in dowry a kibitka or tent, a camel or riding horse, and cattle, also a bride's head-dress, called saoukele, or, if poor, another called jaoulouk, besides a bed, crockery, and a trunk of wearing apparel.

Cannibal King (to missionary)—"I think the best thing I can do is to eat you."

Missionary (in earnest protest) "I do not agree with you, sir."

Cannibal King—"Well, I musn't eat anything that doesn't agree with me."

"Come home and share pot-luck with me," as Deal said to Shuffle when he invited the latter to his house for a quiet little game of poker.

THE LIME-KILN CLUB.

Difference Between Educated and Uneducated Thieves.

The thermometer in Paradise Hall registered 108 degrees as the meeting opened.

ADMITTED.

An application for membership from Ithica, N. Y., included the names of Tried Brown, Allwood Liscomb, Maj. Henbone Tompkins, Alder Alldark and Moonbeam Holdfast. These five gentlemen have discovered a way to preserve watermelons the year 'round, and a promise was held out to supply the Lime-Kiln Club with 100 melons per month from November to July.

On motion of Stepout Slow, who has had no less than fifteen distinct wrestles with watermelon colic this year, the rules were suspended and the applicants voted in.

SUGGESTED ANOTHER.

The Secretary then read the following from Poplar Grove, Ark.:

COTTON SEED HALL,
COLORED LAW ABIDING CLUB.

Brother Gardner:

The following resolutions were adopted at our regular meeting:

Resolved, Dat education do educate, kase it am always de ignorant man what steals de chickens and gets in jail, and it is de educated man dat is short in his book accounts for the sum of $160,252 20.

Resolved, Agin, dat de popular education we hab is a savin' to tax-payers, as it elevates de crime of stealing and takes it out of de courts and puts it above de law. Course de law don't punish a man for "bein' short in his ledger."

Resolved, Dat we change our motto of "Be sure you're right, den go ahead" and make it "Be sure you're law abidin', den go ahead."

Resolved, Lastly, dat a copy of dese resolutions be sent to de Lime-Kiln Club.

UNCLE GOODLOE, President.
JAKE ROPLEY, Secretary.

"De resolushuns will be received," replied the President, "but I would suggest a different motto from de one las' menshuned. Seems to me dat sunthin' like 'Be sartin to steal 'nuff to pay de lawyers, or doan' steal at all,' would hit de case mo' in de center."

NO VIOLATION.

A letter of inquiry from the Hon. John Skipout, of N. Y., asked if it was violating any rule of the club for a member to have his head shaved and wear eye-glasses and polka-dot collars. The Secretary was instructed to answer him that, while a member who thus disguised himself violated no rule, he must take his chances of meeting the fool-killer and being brained with a stuffed club.

IT COULDN'T BE.

Giveadam Jones here arose to a question of privilege. Some one had sent him a copy of the Norwich, N. Y., Post, in which was an article purporting to be a report of a meeting in which he had vigorously opposed the policy of Brother Gardner on the civil rights question and carried the vote of the club with him. He wanted to deny the correctness of the report. He wanted to take his affidavit that it must have been written by some enemy who wanted to place him in a false light.

"Doan' get excited, Brudder Jones," softly answered the President. "Nobody in dis club believes de report. In de fust place we all know you am in accord wid our policy on de cibil rights queshun, an' in de secon place we all know dat if you should stan' up an' deliber any such speech in dis hall sunthin would drop! You couldn't have percolated any sich remarks an' been on deck to-night! Sot down, Brudder."

A SPECIAL CASE.

A communciation from the office of the Dock Commissioners of New York City asked that the rules be suspended and Getaround Hoyt, of that place, be voted in at once, as he was about to marry for the third time, and wanted the certificate of membership to wear for a shirt bosom. He was described as a man 50 years of age, wears No. 12 shoes, prefers pumpkin pie to any other, and can sweep an office in three different languages. He has for the past several years been an open enemy of the Lime-Kiln Club, but of late has seen the error of his ways and concluded to move along with the other 4,500,000 colored people of the United States.

Pickles Smith objected to a suspension of the rules. The application was deficient. It did not state whether the applicant was sound in body or had a wooden leg. He might be cross-eyed and loaded with dyspepsia. No one could say that he was honest or had any religious belief. The objection laid the application over for two weeks.

A SECOND OPINION.

A letter from the office of the Sixteenth Assistant Auditor of the Treasury Department contained the following inquiry:

"Does Brother Gardner hold that colored people have no right to attend skating rinks and other such places of amusement?"

"I has answered dat queshun once," replied the old man, "but I will take it up once mo'. De right ob de case am not queshuned. A cull'd man kin work in a sewer all day an' den have de right to sot down in a street kyar between two white ladies. He kin kill skunks an' eat onions, an' take a seat in de parkay circle of de opera house. He kin shoulder his white-wash brush an' march aboard a ferry boat an take de best cheer. He has a right to go anywhar' a white man kin go.

"But am it policy? Does de white man invade our hotels an' halls? Does he fo'ce his way into our festivals an' dances? Doan' he let us alone, in a soshul pint of view, as a race? Den why try to crowd in on him? I doan' deny de right, but I say to one an' all of you, keep ter yerselves. Let de white folks alone. De law may gin us de right to intrude, but let us be content to wait an' improve. De janitor will now strike de triangle an' we will depreciate to our homes."

SALOONS.

IRWIN'S SALOON,
Cor. Edwards & Market Streets,
Independence, - Cal.

THE PUBLIC GENERALLY ARE respectfully invited to call and inspect my establishment, which has been entirely refitted and furnished in a style second to none on this side of the mountains. A SPLENDID NEW BILLIARD TABLE provided for the amusement of patrons.

Dated at Independence, December 24, 1884.

MISCELLANEOUS.

JOHNSON'S NEW
UNIVERSAL CYCLOPÆDIA.

"THE EST."—Planned by HORACE GREELEY, LL. D.

All our greatest institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown University, Cornell University, Amherst, Hamilton, Rochester, Madison, University of California, etc. Thousands of our greatest scholars have declared it to be THE BEST. It is not only the BEST CYCLOPEDIA, but is a whole library of "CONVERSATIONS-LEXICON" in the opinions of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. R. Spofford, Librarian of Congress, Washington, D. C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the Library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL. D.

"By far the best," etc.—Hon. Alexander H. Stephens, LL. D.

"The best we have," etc.—Hon. Wendell Phillips, LL. D.

SOLD BY SUBSCRIPTION ONLY.

For particulars to obtain or sell it, etc., address,

C. H. LIBBY,
General Manager Pacific Coast.
MARYSVILLE, - - - - CAL.

Send in your orders by mail for the holidays to Mr. Libby, as above.

HELP for working people. Send 10 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, of all ages, grandly successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed from first hour. The broad road to fortune opens before the workers absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY!

It is a never-failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhœa, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.

A Mathematical Masticator.

A pale man with a high forehead, came into Booge's restaurant yesterday, sat down at a table and ordered his dinner. Then he took out of his pocket a large diagram apparently covered with unintelligible signs and algebraic formula, and fastened it with a pin upon the wall where he could easily observe it. When his dinner came he looked it over attentively, and then turned to a profound contemplation of his figures. After a while he began to eat, but with a great deal of caution and reserve, as if he were afraid of making a mistake, or suspected the biscuit of concealing a snag. Frequently he paused between the bites and his lips moved as if in prayer. The latter illusion was dispelled, however, by the occasional indistinct pronunciation of the name of a numeral. He was evidently counting. He chewed with his eyes fixed upon the equations of the diagram. There was a pale, bluish tinge about his face, and he looked bilious. His neighbor at the table hitched his chair a little further away and placed his hat where he could seize it at a moment's notice. He suspected the new-comer of being a lunatic. Suddenly the stranger caught his eye, started and inadvertently swallowed his food. He seemed to be very much put out by the occurrence.

"Why do you look at me that way?" he demanded. "Do you think I am peculiar?"

"Well I did think your manner a little odd," ventured the other.

"Not at all, sir," returned the stranger, emphatically. "I'm a dyspeptic and my digestion is in a bad way. I have just learned of Mr. Gladstone's rules for regulating mastication so as to in the highest degree facilitate digestion. I have adopted his system of thirty-two chews to a piece of steak, fourteen to a cold potato, etc., only I have improved upon it. What was before crude is now systematic and theoretical. It is the combinations which puzzle me. They will not when I get used to it. Is the explanation sufficient?" It was, and in a few moments more the scholarly dyspeptic was plunged in the intricacies of a profound mathematical problem.

Blind as a Bat.

"Blind as a bat" is an old saying so much the reverse of fact that it is not easy to explain how it ever obtained currency among people who had seen the animal. Nevertheless, bats are not dependent upon their eyesight for a means of getting about in the dark. They are able to fly with great speed and accuracy, to avoid obstacles, and to enter small holes without making the least mistake. Experiences have shown that this singular power of direction is due to a remarkable development of the sence of touch especially to be found in their great expanse of wing. Further, these animals possess large ears and curious nostrils, some of which are leaf-like formations of the most extraordinary description. The skin growths are all supposed to have reference to the skill with which the creatures wing their way in the darkest caves. Most bats feed on insects which they catch on the wing; some of them eat fruit, and a few enjoy a bad name because they suck the blood of other animals. Of the last are the so-called vampire bats, respecting which it used to be said that they fanned their victim with their wings while they sucked his life blood, but that part of the tale is altogether fabulous.

The Colonel was finding fault with Bill, one of his hands, for neglect of work, and said he would have no more preaching about his place, as they had too many protracted meetings to attend. "Bill ain't no preacher," said Sam; "he's only a 'zorter." "Well, what's the difference between a preacher and an exhorter?" "Why, you know, a preacher he takes a tex', and he done got to stick to it. But a 'zorter—*he kin branch.*"

An Indiana murderer, hanged last week, just before the drop fell nodded to a clergyman, and said, "I'll see you later." As the man died unrepentant the minister is somewhat dubious over the appointment.

"By acting too quickly we often give impulse to forces, which if left alone, will exhaust themselves and do no harm." We believe this implicitly. What's the use of kicking a fool when he can't appreciate the impulse that led to the action?

A Pennsylvania farmer slaughtered a hog and hung up the carcass in his kitchen, determined to try the "faith cure" process. In a day or two of hot weather his faith was entirely cured.

AT THE HAGUE.

Bathing in Holland—How the Dutch Resemble the English.

After seeing such picturesque cities as Rotterdam and Dodrecht, The Hague seems very common-place. The fashionable part of the city looks as new as an American watering-place, and the streets have very little charm. The palaces are poor affairs, and the squares and plazas unimpressive. The monumental statues are the worst that I have ever seen outside of London. Yet the place has one glory in its trees. They grow in the midst of brick pavements and graveled squares, not like the consumptive trees of Paris but with the richness of rural England. The limes and lindens, the sycamores and the elms are really grand. The road out to Scheveningen—the North Sea Coney Island—lies through the forest—the Scheveningen Boschjes—and is traversed by a horse car in about a half hour. This is the most beautiful piece of woods that I have seen on the Continent, and fairly rivals some of the lesser English parks.

It is a sensation to go up hill to the roast, but it is a most interesting study. There one may learn the secret of Holland. The sea heaps up sand in bars along the coast, just as it does along the ocean coast of Maryland, Virginia and North Carolina, leaving sounds between the low islands and the mainland. In Holland these sounds are drained, and are rich and fertile land. Along the coast there is a natural dyke, the sand dunes—called here Duinen. These natural dunes are by human labor made continuous, and strengthened at the weaker places. This dune is several hundred feet wide at the base, and varies considerably in height. At the point where the flight of steps descends to the bathing place I counted fifty-eight steps, but parts of the dune are not so high. Indeed, so low does it look in one place that it suggests to the mind that a combination of a very high tide and a strong nor'westerly gale would repeat the disaster of three centuries ago, when the sea broke over the dyke and swept away the village of Scheveningen.

HOW THEY BATHE IN HOLLADD.

The surf is very tame, compared with that of the Atlantic, and resembles Chesapeake Bay or the English Channel. The proprieties are observed here much better than at Dieppe. Bathers get into covered wagons or bathing machines, and are drawn out into the sea, and thus bathe at some little distance from the shore. The sea deepens very slowly, and there is very little undertow. The beach chairs are a delightful institution. They are made of basket-work, and each chair has a very high back, and a canopy overhead. You turn your back to the sun, and there you are. Over the wide, flat strand groups of these chairs cluster together, and there flirtations go on in the Dutch, German and English languages. There the old folks sit, too, and watch the children engaged in their never-ending toil of spading up the sand and carrying it about in buckets and wheelbarrows.

A wide brick pavement is laid along the beach, for the sand is very fine, and the walking upon it laborious, even when it is wet. There is a pavilion where the band plays, and music may be heard in the plazas around the chief hotels, and at night I heard a fine concert at the Kurzaal—a young Dutch lady pianist, another young lady who sang German songs, and Maurice Dangremont, the Brazilian "boy violinist," who is now grown up and dresses like a man. The piano-playing was mediocre, but the singing was good and the violin delicious. It seemed strange to be listening to this on top of a Dutch dyke, and to hear the deep diapason of the moaning North Sea through the sparkling floriturasof Maurice Dangremont.

The Hague is not a business place. It is kept up mainly by the fact that it is the seat of government and the abode of the diplomatic representatives of other countries, and thus the seat of Dutch gaiety and fashion. The new part of the town has nothing in it characteristic. A large part of the people speak bad French quite fluently, and many speak a little English. The Dutch language often sounds strangely like English. A little boy on the street asked me "Hoe laat is het?" I showed him the face of my watch. I understood him when he called the hour. Whole sentences sound like English, and it seems to me that any one who knows English and a little German could pick up Dutch in a few weeks.

WHERE SPINOZA LIVED.

In the old part of the town there is more of Dutch picturesqueness than in the new. The neighborhood where Spinoza lived is said to be very little changed. There is a fine bronze statue of him near the house where he lived and worked at his trade of grinding lenses while he wrote his philosophy. There is also a portrait of him in the museum—a fine, intellecteal and very spiritual Hebrew face, with the sweetest expression. The synagogue cast him out because he was not orthodox; the Christians shunned him as an atheist; yet now the house where he lived is marked with a tablet, and his bones are buried near the pulpit in a Christian church. I have a suspicion that there is a "moral" floating around there somewhere.

Delft, the old town which gave its name to a kind of pottery, lies one hour from The Hague by the horse cars. The old pottery has recently been revived on a small scale. In the Prinzenhof—the old palace—there may be seen the exact spot

WHERE WILLIAM THE SILENT WAS KILLED.

The scene recalls with wonderful parallelism the assassination of Garfield. The murderer had concealed himself behind an open portal—in front of which William had to pass on his way to the staircase—and waited until the Prince passed, and then shot him in the back, and sought to escape through another door. The assassin was not, however, assisted on this occasion, by a consultation of eminent surgeons, and he was executed without being permitted to bulldoze a judge or to explain to a jury how his name would "go thundering down the ages." Alas for the primitive simplicity of the sixteenth century!

In Holland I am constantly reminded of the historian Freeman's somewhat tiresome "Old England, Middle England and New England." He calls this part of the continent "Old England," Britain "Middle England" and America "New England." He only means that it is the same race in three different homes. The Dutch seem so me to be

VERY LIKE THE ENGLISH,

And very like us. The same complexions and hair, the same cast of features, the same quiet resolute look, the same extremes of a fierce coarseness and of an exquisite refinement in the type; the same love of liberty and of practical realities, and the same religious bent, almost the same language, and quite the same love of long drinks and short pipes. I had a sweet home feeling when I was in rural England, and even in London; yet I feel utterly a stranger in France and in Belgium. Why is it that I have something of this home feeling once again, among the dykes and windmills of Holland? The very trees here look like English trees, and so far as my brief experience enables me to judge, the climate is like the English climate. Heine said that the North Sea climate had no summer, but only a winter painted green; yet no temperature could be more delightful than these last ten days of August. The weather prefers to rain, and to drizzle gently between the showers; but it is very fond of tempting you out in your good clothes, and spreading a cloudless blue over your head until it gets you safe out of reach of succor, and then literally spouting at you. It rains as if all the canals were suddenly turned upside down, and by the time you get thoroughly soaked, the sky resumes its delicious blue. Yet under this sky the verdure it so fresh, the trees so rich in green, the mosses and lichens on the tree trunks so pretty, the cattle look so sleek, the complexion of young women so lovely, that I can well understand why Dutch painters never want to go out of Holland to seek inspiration for their art. The country is full of quiet beauty. I. R.

A Building With one Picture.

One of the sights of Chicago is the Siege of Paris. The Siege of Paris is a picture, although you might not think so when you look at it. It is a picture that has had a house built entirely for itself. As you go out on the grip cars you come to a red brick building of large size that looks as if it were built around a grosmeter. The man at the door exacts a tax of fifty cents, which seems a large sum for a look at one picture, but the ticket really gives you a visit to the most interesting part of France while you stay in there, and half a dollar is not dear for a trip to Paris. The illusion inside is perfect. No one could tell but what he stood on the roof of the garden's cottage, as he is supposed to do, and on looking around he seems not to see a painting, but the real brilliant France landscape spread before him. The gardener's grounds, with the battered and broken wall, which are real, cannot be distinguished from the suburban mansion of Worth, the man milliner, which is painted. It is impossible, even with an opera glass, to direct where the genuine dirt road of Chicago soil blends with the roads of France. It is all the perfection of opitcal illusion. The great city spreads out in the distance; the River Seine winds naturally among the suburban villas. The troops and the dead and wounded are startling real. All this is hightened by the occasional bursts of sunlight from the unseen windows above. A canopy is over the spectators' head so that they cannot see the skylight. The frames must be of ground glass, for the direct rays never strike the picture, but the light and shade chase each other over the landscape, just as if the lookers-on saw the real fields and hills on the environs of Paris. The tourists who visit Paris by way of Chicago are "personally conducted," as our friends cook would say. A lecturer stands up and gives an account of the scenes which formed the last episode of the disastrous siege. The picture was painted in Paris by a celebrated artist who had many assistants, some of whom had been in the engagement pictured. One of them came to Chicago to give the finishing touches to the picture and see to its setting up. The whole institution, red brick and all, cost somewhere in the neighborhood of $200,000.

"Oh, I do so dote on the sea," she gurgled. "If you only had a yacht, Agustus dear!" "I have no yacht, Wilhelmina," he sighed, "but I can give you a little smack." And then it sounded as if a cork had flown out of a bottle.

"Will you have your oysters scalloped?" asked the waiter at an Austin restaurant, of a green customer. "Have the oysters scalped? Has everything in the restaurant got hair on it? Why don't you scalp the butter?"

TOUGH TRUTHS.

Some Curiosities in Nature That Surpass the Invention of Fiction.

A REMARKABLE POINTER.

A few days ago John Connors, of Split Rock, was hunting woodchuck in the vicinity of Mud Lake. On nearing a clump of bushes near the edge of the lake his pointer dog, Lulu, came to a point on what he thought was a bird. He told her to go on and put the bird up, but she could not start it. He walked around on the other side of the bushes, and there sat a boy. He had been fishing for butheads. The dog, on coming near one of the largest of the fish, again came to a point. Connors asked the boy to let him open the largest of the fish. It weighed about two pounds, and in it was a hen woodchuck partly digested.

HALF CALF AND HALF GREYHOUND.

Mr. Norris, a farmer living in Pleasant Township, Ky., is the possessor of a curiosity in the shape of a colt-puppy, a beast half dog and half horse. The animal was foaled by a fine driving mare on August 3. The colt, or whatever it is, has been unable to stand since its birth, but is getting along finely. Its description is as follows: The head is that of a greyhound—long ears, nose, and small round neck devoid of mane. The body is long and slender, covered with fine hair, as is the tail, which is long and slender. As there is no long hair on mane or tail, it has the appearance of a dog. The hoofs resemble a horse's hoofs. It laps milk and also suckles. Mr. Norris has been offered $250 for it, or $500 if he succeeds in getting it on its feet.

AN UNKNOWN MONSTER.

For the past seven or eight years different stories have been told concerning a dreadful monster that inhabited a body of water known as Crater Lake, situated about fifty-five miles west of North Linkville. John Shallock, with others, has just seen the monster. Mr. Shallock says it looked as large as a man's body, and was swimming with about two or three feet out of water, and going at a rapid rate, as fast as a man could row a skiff, leaving a similar wave behind it. Its face, or head, looked white, and although it was a long way off, they could plainly see that it was of an immense size. Several shots were fired at it, but it was so far off that they could not see where their bullets struck the water. Charles Moores says the bluffs around the lake are from 1,500 to 3,000 feet above the water, and almost perpendicular.

A MARVELOUS CLAIRVOYANT.

There is at present in a certain city in Italy an aged woman of humble origin, who possesses marvelous powers of clairvoyance. She has been consulted by persons of high social standing, and on more than one occasion by royalty itself. She has no power of mesmerizing others, being simply a medium. Her visitor places his hand in hers, when she immediately becomes clairvoyant, and in this state accurately describes his state of health and business, frequently making startling revelations. In the event of any ailment she prescribes herbal cures, often with powerful effect. Persons at a distance send a lock of their hair with a fee, which she holds in her hand, and so places herself on rapport with her patients. The foreign papers seem to have full faith in her powers.

A COBRA ACTS NURSE.

The cobra is not generally credited with kindly feelings toward humanity; on the contrary, it has the reputation of being almost the equal of the hamadryad in misanthropy. Perhaps, however it frames the same charge against man, on the ground that whenever it crosses his path he invariably seeks its life. From an interesting incident which occurred lately at Padappet, in the Madras Presidency, it appears that there are some cobras, at all events, who experience a yearning for more friendly relations with the human race. An English lady returning to her house after the evening's drive, was horrified on entering the nursery to see a huge cobra, with expanded hood, rearing itself over her sleeping infant.

The reptile did not attempt, however, to harm the baby, but contented itself with softly hissing as it moved its head slowly to and fro. Clearly it must have watched the nurse when putting the child to sleep, and sought, in its humble way, to execute a lullaby with the proper accompaniments. On an alarm being raised the serpent made off in haste, but without taking even a nibble out of the baby. Perhaps it was just as lucky that the latter did not awake; a baby in full cry has been known before now to provoke even human beings to wrath.

A HEAD LIVES AFTER DEATH.

M. Brown-Sequard wanted to see whether life, after a violent death, is susceptible of being recalled in an animal killed in a healthy state. He beheaded a dog familiar with his voice. The blood of another dog was beforehand praparad to be transfused into the arteries of the head. No sooner was it injected than the inert head became animated, the eyes opened, and, on the Professor calling the dog by his name, an attempt was made to answer by a caressing look. When the arterial blood was exhausted life disappeared. This painful experiment was suggested by one made by Dr. Leborde on Campi's head an hour and a half after execution, and when, presumably, the cerebral matter had greatly lost excitability. Nevertheless, when arterial blood was injected into the head the mouth appeared to take a living character, the eyelids were raised, the pupils contracted when light flashed upon them, and, by an orifice in the skull it was seen that circulatien was momentarily established in the intellectual convolutions.

BETRAYED BY HER PET.

Among the minor items of local news in the Parisian journals is one which may be regarded as a pendant on a small scale to the old story of the dog of Montagris. A young English opera dancer, who, it seems, is frequently guilty of the reprehensible omission of neglecting to pay the cab drivers whose vehicles she engages, left her dog as a sort of a pledge with her Automedon the other day, when she alighted to make some purchases in the establishment of the Louvre. She made her egress from the building by a door on the opposite side, and the cabman saw nothing more of her till a day or two ago, when he espied her in a cafe, where she was having some refreshment. He asked her for his fare, but she denied all knowledge of him, and flatly refused to pay him. The cabman disappeared for a moment, and returned with the dog, which he had since been carrying about with him. The moment the little creature saw his mistress he flew toward her, wagging his tail, barking joyously, and generally indulging in all the recognized canine manifestations of delight. The case was clear—so clear that the young person herself did not venture to dispute the matter further. Unfortunately she had no money, and the Commissary of Police before whom she was taken sent her to the depot.

A Henpecked Turk.

To tell the truth, a Turk is as badly henpecked as could well be imagined. The good old days when he could quietly strangle a retractory wife, and drop her into the Bosphorus to be buried at the State's expense, passed away a quarter of a century ago under the European spasm of virtue that established the "joint control." Since then he has been too dejected to assert his power, and as a result the women do very much as they please. They stay in or go out, ramble about the thoroughfares alone, ride in the horse-cars or the caiques, gossip, study, read and frequent the baths much as if they had no lords and masters at all. But in point of fact there always has been a paradox in the rules of conduct laid down for Turkish women. The forced covering of their faces in the streets and the strictness in the lines of social intercourse throw a mystery around their treatment that has had much to do with making it seem severe. But, on the other hand, there is probably no nation in the world where the woman is so jealously guarded in her rights of life and property, and so literally protected against her husband as in Turkey. It is considered quite the thing for a jealous Turk to go down to the old pier at Seraglio point and ruminate on his condition after the Marius-Carthage fashion. He doesn't expect to better his state thereby any more than to restore the half-submerged masonry to its original condition, but it is quieter there than it is at home, and he gets a melancholy satisfaction in the recollection of the number of faithless spouses who have met their punishment from it edge.

Mistook it for Fireworks.

A Chinaman who was carrying some clean clothes to a room in a business block on La Salle street discovered a fire-extinguisher in the hall, and when no one was looking he touched a match to the end of the little hose and ran. One of the occupants of the building saw just enough of the performance to imagine the rest, and he called the heathen back. John came up slowly, and the man said. "Touch him off again." John struck a match, and the man holding the hose turned the crank at the same moment that the Chinaman applied the fire. The escaping chemicals hit John in the mouth and eyes and covered him from head to foot with salaratus. When he could breath he turned to the man, who had by this time corked up the machine, and, smiling in a sickly way, observed: "Jelusalem! Melican man's fii'-clacket too velly quick. Him bustee house wide open some time."—[Chicago Herald.

Mercury as the God of Cats.

A lady who has, previous to leaving the modern Athens for the summer, carried her cat to board at the cat hostelry at Brighton, is vastly entertained and entertaing in regard to it. She found the building delightfully finished in hard wood, while a statue of Mercury keeps guard in the front hall. Why Mercury she is not able to explain, rejecting with scorn the suggestion that as Mercury is the god of thieves it is appropriate that his image keep guard in a home for cats. The attendants seemed cheerful and fond of their charges, although perhaps inclined to be a thought too ceremonious in such matters as insisting upon letters of introduction before making one boarder acquainted with another. The lady in question allowed her young charge to be introduced to two elderly and sedate tabbies, with whom she seemed to fraternize admirably.

Marie Durand, of Auberne, France, shows by her baptismal register certificate that she was born 123 years ago. She has been a widow ninety-six years.

Miss Hastings, a relative of Warren Hastings, lives at Malvern, England, at the age of 103. She was ten years old when her famous relative was acquitted

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, JANUARY 17, ... 1885

C. Mulholland,

EDITOR & PROPRIETOR.

LAST Saturday morning Martin Glenn a citizen of Bodie, had one of his eyes destroyed by a piece of wood that he was chopping flying up and striking him.

THE official figures of the yield of Comstock mines for 1884 are $2,432,-884.58, the largest for several years. This does not look as if the mines of the Comstock should be abandoned.

THE Bodie *Free Press* says Mr. Van Voorhies will be able to secure any legislation needed by his constituents. All that his constituents in Inyo county will ask of him is, that he secure an amendment to the county governments bill, providing for a reduction of the salaries of county officers to reasonable amounts.

THERE are indications that large tracts of land will be taken up in Owen's Valley before long. Of late several parties have been looking over the Valley with an evident intention to make locations. It would be better to have the land taken up by colonists than to have large tracts fall into the hands of individuals. But where great bodies of land are held by a few, improvements are apt to be made on a large scale, and sooner or later these large tracts will be divided up. Better have the lands of Owen's Valley improved by a few great land holders than to be forever in their present unproductive state.

THE publication of certain letters that passed between General and Mrs. Grant, and W. H. Vandberbilt, proves that Mr. Vanderbilt has treated the former with noble generosity. The action of General Grant is not less creditable to him. The General asked from Mr. Vanderbilt a loan of one hundred and fifty thousand dollars, to be used for the relief of the Firm of Grant, Ward & Company. Without asking any note or security of any kind, Mr. Vanderbilt at once gave his check for the amount. Within the next twenty-four hours the Firm had gone into hopeless bankruptcy, and every dollar of the borrowed money was gone. In relation to what followed, one of the letters from Mr. Vanderbilt to Mrs. Grant says:

"You and he sent me within few a days of the time, deeds of your joint properties to cover this obligation and urged my acceptance, on the ground that this was the only debt of honor which the General had personally incurred, and these deeds I returned. During my absence in Europe the General delivered to my attorney, mortgages upon all his real estate, household effects, and swords medals and works of art, which were memorials of his victories and presents from Governments all over the world. These securities were, in his judgment worth $150,000. At his solicitation, the necessary steps were taken by judgments and etc., to reduce these properties to possessions, and the articles mentioned have this day been bought in by me and the amounts bid applied in reduction of the debt. Now I am at liberty to treat these things as my own; the disposition of the whole matter most in accord with my feelings is this:

I present to you as your seperate estate, the debt and judgment I hold against General Grant, also the mortgages upon his real estate and all the household furniture and ornaments, coupled only with the condition that the swords, commissions, medals and gifts from the United States, cities and foreign Governments and all articles of historical value and interests shall, at the General's death, or, if you desire it, sooner, be presented to the Government at Washington, where they will remain as perpetual memorials of his fame, and of the history of his time. I enclose herewith assignments and judgments to you of the mortgages and judgments, bill of sale of personal property and a deed of trust, in which the articles of historical interest are enumerated. A copy of this trust deed will, with your approval, will be forwarded to the President of tha United States for deposit in the proper department. Trusting this action will meet your acceptance and approval, and with kindest regards for your husband, I am yours respectfully.

W. H. VANDERBILT,

NEW YORK, JANUARY 10."

General and Mrs. Grant have both written to Mr. Vanderbilt in reply, their final determination being to decline his generous offer, from motives of delicacy only, and not from want of appreciation of his kind intention. The whole of the correspondence published is much to the honor of the parties; the letters of Mr. Vanderbilt prove that he is not a cold blooded Shylock, insisting upon his bond; while those of General and Mrs. Grant prove that they place a higher value on honor and fair fame than on any maternal things, no matter how valuable these may be. General Grant is a great historic personage, it is evident that as old age comes upon him his actions are more governed by that consideration. The people of the United States should take care that one whose history is so intimately connected with that of the Nation, is saved from pecuniary embarrasment near the close of his honorable life. The fitting thing to do is restore him to the rank created especially for him in the army.

THE price of copper is now so low the miners in some parts of the country are stopping their works. Seven and a quarter cents a pound has been accepted for copper on the spot.

IN an article discussing the proposed Convention at Denver, of those interested in silver mining, the Virginia *Enterprise* suggests the holding of a similar Convention at Carson. As Colorado and California are both about to hold conventions, with a view to oppose legislation that would do serious injury to their mining interests, the *Enterprise* argues that Nevada is as deeply interested as either of these States, and should follow their example by holding a Convention.

WHO shall represent the people of California in the Senate of the United States? Capacity and integrity alone should govern the Legislature in their choice of a Senator. No man should be honored with that high office upon whose character rests even a shade of suspicion. No man should be chosen who prefers the success of party (often only another name for the spoils of office) to the good of the whole people. California never yet has been brought to shame by sending a rich ignoramus to the Senate. One rich man is now named as a candidate, but he is a man of a cultivated intellect, and would do no discredit to the State in any position. The temper of the time demands that all men in legislative office shall be able and willing to do even justice between the people and the great corporations, and it is not likely that any man can be elected Senator who is not only a friend to corporations, but is himself a leading member of a great corporation. One of the more prominent candidates named for the office has all the qualifications that would fit him for it under the considerations here alluded to, and Mr. Van Voorheis would be most likely to express the will of his constituents in Inyo by voting for Mr. Estee.

Foreign News and Gossip.

England owes $3,780,000.

The finance of Germany are in a bad shape.

The new American Episcopal Church in Paris cost $500,000.

Twenty one thousand houses were built in London last year.

The French Senate has passed a bill abolishing public executions.

Over $35,000,000 has been lost in gambling in Paris during the past five years.

Crime is said to be decreasing in Paris proper, and to be increasing in the suburbs.

The Indian Government has prepared a bill devoting $20,000,000 to sanitary works in Naples.

Heidelberg Castle is being mined by a railway which has been carried under it through a tunnel.

The Conference of the Latin Monetary Union has been further postponed to the 15th of January next.

A farm in Lincolnshire, English, which cost £80 per acre a few years ago, has just been sold at £22 per acre.

The last census of Roumania gives a total population of 4,424,951, of which 2,276,558 are males and 2,148,403 are females.

The Queen of Beauty in the Paris show is to be chosen by photograph, the likenesses to all contestants being taken by one artist.

It costs $300 a night to light the Grand Opera House in Paris. The fuel is $10,000 a year, and the expense of sweeping and dusting 7,000 a year.

Members of both the House of Lords and House of Commons sit with their hats on, remove them only when they rise to speak or to go out of the chamber.

It requires 1,400,000 oxen, 1,500,000 sheep, 1,500,000 calves and 250,000 swine to feed London a year. The Englishman never got his "roast beef" reputation without eating it.

A Paris Judge refused to hear a case against a wife who had thrown her husband out of a window and broken his leg, but advised her to open a gymnasium in which other wives could train.

John Roberts, M. P., owns about 300 acres of the land on which Liverpool is built, containing at present 7,500 houses, with a population of about 40,000. No liquor saloons are permitted on the property.

The depreciation of land in England continues. An estate in Devonshire, one of the most beautiful and fertile countries in England, has been sold for £8,000, for which £18,000 was refused a few years ago.

On the 28th of next March the first anniversary of the death of Prince Leopold, the Queen and the widow of the Prince, the Duchess of Albany, will make a pilgrimage to the villa at Cannes in which the Prince died.

Assisted immigration ceases in New South Wales, Australia, with the close of the current year, the Colonial Legislature having at a recent session made a final appropriation of £50,-000 towards winding up the business.

General Hazen says he knows something, but cannot tell it. He is very much in the position of the boy who is caught when he has his mouth full of apples he has just stolen.

A bald headed man hasn't much to be proud of, but he always wants to put on hairs.

Scientific Miscellany.

A late investigation shows that Australia contains 108 species of snakes—35 of them harmless, and 73 venomous.

At the Danish scientific station in South Greenland, at Namortalik, heat and mosquitoes in summer are so troublesome as to be suggestive of a tropical climate.

Attention has been drawn to a tree of Southern India—the "Tuchmig" of the Chinese or Prameria glandulifera of botanists—from which it is said large supplies of caoutchouc can be drawn.

Quite successful experiments in distributing the electric light to great distances have been made in connection with the Turin Electric Exhibition. A Siemens dynamo of thirty-horse power generated a current which was simultaneously used by three electric light systems distributed over a circuit of 24 miles.

St. Stephens' college, Delhi, boasts of a prodigy in the person of a blind student named Chanda Singh. He cannot read or write, but has such a wonderful memory as to be able to repeat all his text-books—English, French and Urdu—by rote, and to rapidly work out sums in arithmetic, even the multiplicarion of any number of figures by another equally large.

Authorities are not agreed concerning the poisonous properties of the aniline dyes. Dr. Grandhomme, who has had the benefit of prolonged observations in German aniline is of the opinion that they are poisonous only when containing arsenic. Messers. Poincase and Nassias, however, consider them dangerous even in a state of purity, magenta being the least dangerous of all.

Another Effect of the Great Eruption.—It has just been made known that during the great volcanic disturbance at Krakatoa telephonic communication was almost impossible in Singapore, 500 miles away. On a subterranean cable, of about two miles in length, words were drowned by peculiar sounds resembling pistol shots. The phenomenon seemed to be of an electric nature, rather than acoustic.

In recent experiences, the images of candles were seen through the clear water of Lake Geneva when sunk to a depth of about 100 feet, the electric are being still visible when some ten feet lower. At greater depths the clear images disappeared, being replaced by diffuse light, faintly preceptible when the luminous bodies had reached a little more than 200 feet in depth. Sunlight affects photographic plates after passing through a thickness of about 800 feet of the water.

Man's Ignorance.—The likeness of any one person's knowledge is astonishing. "I do not even know an astronomer," says Mr. Richard A. Proctor, who is not ignorant in some departments of his own subject; nor any chemist, geologist, botanist, entomologist, or other specialist, who—if really a master—will not admit that there are departments of his special subject about which he knows very little. How much more ignorant must he be of subjects outside the few he can have made his own."

An Interesting Discovery.—The governor of the Island of Sims has just discovered an ancient tunnel, about 5,000 feet long, and constructed at least nine centuries before the christian era. The old seaport received its drinking water through this tunnel, which was mentioned by Herodotus. It is well preserved, with water tubes about ten inches in diameter. The precision of the work of the ancient engineers was hardly equal to that of the present day, the tunnel being bent in the middle.

An Astronomical Prediction.—The planet Neptune, it will be remembered, was discovered in a remarkable manner, its place in the heavens having been mathematically determined before the planet itself was found. After long investigation Mons. Camille Flammarion, the eminent Frence astronomer, has become convinced of the existence of yet another planet, its orbit being outside that of Neptune. He perdicts that it will be finally discovered, but not for some years to come, and that it will appear as a star of the twelfth magnitude—quite large enough to be seen and followed by many telescopes now in use.

Endurence of heat and cold.—Travelers in polar regions have survived exposure to a cold as great as 75 degrees below zero Fahrenheit. On the other hand the inhabitants of some parts of the globe are forced to endure at certain periods a natural temperature considerably higher than 100 degrees above zero. A still greater heat—greater even than 200 degrees—may be borne by the human body for a short time. Brewster mentions that Chantry and five or six friends remained two minutes in the sculptor's drying furnace, bringing out a themometer which stood at 320 degrees. Chantry's workmen entered the furnace when the temperature was as high as 340 degrees.

A Scientific use of brandy.—At the South Kensington Aquarium the effect of brandy in resuscitating fishes nearly dead has been demonstated by fresh and remarkable experiments. Two Prussian carp were taken from the tanks and placed in dry cans for four hours, when on being returned to the water, neither showed signs of life. Brandy was then administrated to one, and at once revived it. No stimulant was given to the other fish, which was allowed to remain in the water for a considerable time, when, as it appeared to be really dead, it was taken out and thrown upon the ground. Four hours later, however, it was picked up, and a little brandy and water was thrown down its throat. The experimenter was astonished to observe slight signs of animation, and quite amazed, on replacing the carp in the water, to see it slowly recover and swim away. Both fishes have since been reported as well as ever.

A Wife's Influence.

Some men would never be able to pull through at all if it were not for the encouragement given them by their faithful wives. A notable instance of how much a man can accomplish, when he is sustained and cheered up by his wife, occurred not long since in a German village. He was a peasant, the strongest man physically in the neighborhood, and he was very proud of it. A wealthy neighbor had just received a load of wood, which was drawn by two strong horses. Our modern Sampson boasted that he, by himself, could pull the load without turning a hair. The owner of the fuel replied that if the peasant could draw the load of fuel to his house he could call it his own.

The peasant accepted the nomination, harnessed himself to the wagon, and undertook to trot off with it, but it was no go. The wagon displayed great apathy, and refused to move. It was so heavily laden that it refused to go off. He tugged, and pulled, and grunted, but all in vain. His efforts had no more effect on the wagon than a Republican speech might have on a Louisiana audience. He was about to withdraw from the canvass, when his wife put in an appearance. She was informed of the nature of the proposition, and saw right off how she could save money. She immediately seized the whip, and proceeded to encourage her dear husband with it. "Get up there, you lazy brute," she remarked, fetching him a clip that made him jump, and removed a portion of his shirt and some cuticle. This cheered up the husband, who made the greatest effort of his life, and started off with the loaded wagon, his devoted wife walking by his side, and helping him along by an occasional punch in the ribs, or a well directed kick when he became discouraged.

It is needless to add that, thanks to the gentle ministrations of the wife, the family was provided with cheap firewood, at the comparatively trifling cost of a new whip and a fifteen-cent bottle of arnica. The man who lost the wood entertains, however, a very exalted opinion of the influence of the women.

BEES IN A MUMMY.

John Carlin was the other day on south side of the river and happened to halt near the mummy of an ox that had been laying on the alkali flat for at least ten years. To his surprise he found bees industriously passing in and out of the animal's mouth. He says he had no doubt that there is a good store of honey within the carcass, the skin of which is intact over the whole skeleton, and is as rigid as sheet iron. Though there is no smell about the mummified ox, Mr. Carlin said he was not so hungry for honey as to go for what the bees had stored away in the carcass.

SCIENTIFIC AMERICAN

ESTABLISHED 1846.

The most popular Weekly newspaper devoted to science, mechanics, engineering, discoveries, inventions and patents ever published. Every number illustrated with splendid engravings. This publication, furnishes a most valuable encyclopedia of information which no person should be without. The popularity of the SCIENTIFIC AMERICAN is such that its circulation nearly equals that of all other papers of its class combined. Price, $3.20 a year. Discount to Clubs. Sold by all Newsdealers. MUNN & CO., Publishers, No. 261 Broadway, N. Y.

PATENTS. Munn & Co. have also had Thirty Seven Years' practice before the Patent Office, and have prepared more than One Hundred Thousand applications for patents in the United States and foreign countries. Caveats, Trade-Marks, Copyrights, Assignments, and all other papers for securing to inventors their rights in the United States, Canada, England, France, Germany and other foreign countries, prepared at short notice and on reasonable terms. Information as to obtaining patents cheerfully given without charge. Hand-books of information sent free. Patents obtained through Munn & Co. are noticed in the Scientific American free. The advantage of such notice is well understood by all persons who wish to dispose of their patents.

Address MUNN & CO., Office SCIENTIFIC AMERICAN, 361 Broadway, New York.

LODGE DIRECTORY.

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARKE, AN INSOLVENT DEBTOR.

JOHN CLARKE HAVING FILED IN THIS Court his petition, schedule and inventory in insolvency, by which it appears that he is an insolvent debtor, the said John Clarke is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clarke, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation or association for his use. The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered. It is further ordered that all creditors of said debtor be and appear before the Hon. John A. Hannah, Judge of the Superior Court, of the county of Inyo, in open Court at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed.

JOHN A. HANNAH,

[SEAL.] Superior Judge

ATTEST, THOMAS CROUGH, Clerk

Dated, January 2, 1885.

STATE OF CALIFORNIA, } ss
County of Inyo. }

I, THOMAS CROUGH, County Clerk of the county of Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing order of Adjudication is true and correct as the same remains in this office.

IN WITNESS WHEREOF I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo this 21 day of January 1885.

ORDER TO SHOW CAUSE ON APPLICATION OF GUARDIAN FOR ORDER OF SALE OF REAL ESTATE.

IN THE MATTER OF THE ESTATE AND Guardianship of Jannette Lewis.

It appearing to this Court from the petition this day presented and filed by W. H. Tibbetts, the guardian of the person and estate of Jannette Lewis, a minor, praying for an order of sale of certain real estate belonging to his said ward, that it is for the best interest of said ward and necessary that said real estate should be sold.

It is hereby ordered that the next of kin of said ward and all persons interested in said estate, appear before this Court on Wednesday, the fourth day of February, A D 1885, at ten o'clock a. m., at the court room of this Court, at the town of Independence in the county of Inyo, then and there to show cause why an order should not be granted for the sale of such estate.

And it is further ordered, that a copy of this order be published at least three successive weeks before the said day of hearing, in the Inyo Independent, a newspaper printed and published in said County of Inyo.

Dated December 41, 1884.

JOHN A. HANNAH, Superior Judge.

State of California, } ss

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 17,.....1885.

—The first effusion of the Spring poets appears in our columns this week.

—The Lone Pine School will reopen on Monday, January 26 1885, with C. H. Groves and Miss Eva Shepherd as teachers.

—The snow having been cleared from the trail the miners have returned to Beveridge, where work will soon be resumed. The Lasky mill will be put in operation some time during the coming week.

—J. J. Stewart, post master at Lone Pine, left for San Francisco on the 15th intending to be gone about thirty days. It is rumored that he will attend the wedding of one of Inyo's boys while he is away.

SCHOOL TEACHER.—Wanted; a position as school teacher, by one who has had ten years experience in teaching and holds all the necessary credentials required in California. Address, INYO INDEPENDENT office, Independence, Cal.

AN INDIAN'S EXPERIENCE.—Said an Indian to a white man "you go to party at Independence?" No, said the white man, 'I am broke and can't go.' 'What for you talk so" said the Indian, "you work all time, earn money, what for you no keep him. Some time I broke too, buy whiskey, drink him up, money all gone. Now no drink long time, work, plenty money, no broke; you do all same, no broke too."

NEARLY AN EYE DESTROYED.—Doctor Blair came very near loosing an eye a few days ago; he was splitting or breaking a stick with an ax, when a piece of the wood flew up and hit him just over the right eye, making a cut clean to the bone. Had the stick hit him just a trifle lower, the eye would have surely been destroyed. Occurrences of this kind are so common that it is odd people are not more careful when chopping wood.

RICH ORE.—W. A. Greenly was over at Big Pine last Monday. He had samples of ore from a ledge recently discovered by him in Deep Springs District. The ore is very rich; pieces as large as a man's fist would, when broken into fragments, hang together like a bunch of grapes. Native silver, in scales and veins, runs all through the ore. The ledge, so far as was yet seen, runs from a foot to eighteen inches in width, but enough work has not yet been done to determine the extent of the ore body.

WILL ILLUMINATE THE EAST.—The people of the East will not much longer sit in darkness, or remain ignorant of the resources and beauties of the Inyo range of mountains and the regions around Owens Lake. Captain Keeler has just had a number of photographic views taken of that locality; he intends going east soon, and with these pictures and his own flow of language and poetical descriptive powers will doubtless make those who listen to him wish that they were among the scenes described. The Captain is sure to create a sensation in the East.

SELLING WHISKEY TO IDIANS.—Last Friday James Lane was arrested by Sheriff McGee and Constable Dan Crough for selling whiskey to the Indians. The Sheriff and Constable went to the large gathering of Indians then assembled at the Fort, and while there arrested Lane in the act of selling the liquor. Next day Lane was taken before the Justice of Peace at Independence and plead guilty to the offence. After close figuring the Justice thought thirty six dollars and twenty cents was all that could be squeezed out of the prisinor and fixed that as the penalty for the crime.

SCHOOL APPORTIONMENT.—Charles H. Groves has this day, January 16, 1885, made the following apportionment of County School money to the various school districts as follows:

Bishop Creek	$262 73
Big Pine	131 37
Darwin	131 37
Independence	131 37
Irving	131 37
Lone Pine	262 73
Milton	131 37
Round Valley	131 37
Union	131 37
Warm Springs	131 37
Total	$1576.42

Property Transfers

The following transfers of property have been entered upon the Record. Indian Mining Company to William T. Coleman, Indian Borate deposit, and South Borate deposit, consideration $1. William T. Coleman to Indian Borax Company, same property, and Lowland borate deposit claim, same consideration.

John A. Rittgers to Samuel M. Good, part of Rittgers ranch, near Lone Pine; consideration $2500.

S. G. Gregg, Sheriff, to Patrick Reddy, Independence mine, New Coso district; consideration $256.

J. H. Stouxenborough to Charles Wagner lot in Bishop Station, consideration $100.

John A. Rittgers and I. P. Rittgers to Samuel M. Good, part of Rittgers ranch near Lone Pine; consideration $2500.

Antonio Barba to Francisco Orona 300 feet in Gobilan mine, Beveridge district; consideration $1.

Frank Silva to J. C. Eddy 600 feet in Columbia mine, New Coso district, consideration $700.

Frank Silva to A. J. Gould, 600 feet in same mine, consideration $600.

BIG MEETING OF INDIANS.

Strange Scenes and Stranger Ceremonies.

An esteemed correspondent has sent in the following very interesting account of the scenes she witnessed at the big meeting of Indians at Camp Independence last week.

On a pleasant afternoon of last week I visited what was to me a sight no less novel than entertaining, the annual encampment of the Indians of Owen's Valley, or, as it is more generally called, the "Indian Fandango." It was held near and just North of the Fort. The grounds were enclosed by a high circular fence, and made wind proof by hanging on the inside every variety and color of blankets, skins, and, in fact, all the paraphernalia of the Indian household.. An inner circle, about eight feet from the fence, was made by huge piles of sagebrush, which served for night illuminations and culinary purposes, which seemed to be going on at all times. Between these two circles all those not engaged in the performances were squatted on the ground, women cooking and the men looking on or eating.

The first view on arriving was of squaws pulling up sagebrush with their hands and placing it in great bundles on their heads or in baskets on their backs and coming from every direction, almost as far as the eye could reach, and depositing it within the camp.

In front of the camp, and about two hundred yards distant, those about to engage in the ceremonies were bedecking themselves in all the fineries of paint, feathers, beads and skins. Some of the bucks were naked except about the loins, and painted in checks and stripes of various colors.

When the exercises began they first moved a short distance toward camp, and then stopping began their song and dance. In front and at the entrance to the camp were placed two men as guards, armed with bows and arrows part of the time and again with guns. When they saw the dancers advancing they set up a loud shout, apparently of defiance, which was answered by the advancing crowd. Then commenced in semblance the Indian tactics of warfare, advancing, retreating, dodging hither and thither in crouching attitudes. Finally the guns were discharged, the guards overpowered and the victor's entered the arena. Singers and dancers formed in lines facing each other. While the dance is progressing an old squaw with a basket of wheat starts up and with prolonged howls and the most dismal screechings proceeds to scatter it over the heads of the dancers. Another and another follows in like manner until the ground is literally covered with grain.

But little can be learned as to the significance of these ceremonies, but there is little doubt that they are of a religious character. Their zeal, earnestness and faith seem real genuine. Their music is rather sad, generally ending in minor tones. The dancers, barefooted, keep perfect time to the music.

I have since learned that the baptism of grain represents feeding their dead, and a similar performance is done with water to quench the thirst of their Immortals. A strange feature in this affair is the utter indifference of the one hundred and fifty or more Indians not immediately engaged. They sit by their fires not looking at or in the slightest degree noticing what is taking place in their midst, thereby revealing the true character of the typical Indian. They pay no attention to stranger or friend, and seem loth or unable to answer any questions asked of them.

Eatables were there in profusion. Dried rabbit, cotton tail and deer, and neck and shank of beef. Tortillas made of flour and half baked in frying pans, and a thick jelly made out of acorns were a part of the comestibles in sight. One party of at least a dozen were sitting around a blanket and before each was a large pile of beads while two of them were counting a sack of silver of not less than three hundred dollars. I could not learn what was to be done with it.

The greatest number of Indians present at any one time was estimated at between four and five hundred. Not more than one hundred and fifty took part in the dance at any one time. Quite a number of white people were drawn by curiosity to the encampment; a few of these proposed to Indians whom they knew to join the dance; this proposition appeared to please the Indians very much, and when the whites stepped into the circle a number of Indians who had recently retired at once re-entered and danced with greater vigor than ever.

The dancing was continued late into the evening, one after another the dancers dropping out of the circle as sleep or weariness overcame them, till at last there were but a few figures dimly seen moving slower and slower in the fading light of the camp fires. Suddenly these, too, dropped out of sight, and then the whole camp was as silent as though the late throng of dancers, and all the others that had filled the enclosure had been but spectres. Next morning those who had come from distant places started on their return to their accustomed haunts, and by Sunday forenoon the whole encampment had been broken up and the Indians dispersed.

Taken all together it was a scene worth visiting, and one which I shall not soon forget. If we could but understand the significance attached to their ceremonies it would at once unfold to our view many of the religious beliefs and superstitions of these Indians.

LOSSES.—In the fire at Benton last week the loss of the Watterson Brothers is estimated at $8000; insured for $5,500. The losses of the other parties in the same fire are estimated to aggregate $7000 more, on which there was no insurance.

THE WORLD'S FAIR.

[SPECIAL CORRESPONDENCE.]

NEW ORLEANS, Jan. 9, 1885.

Interest in the Exposition grows apace day by day. Those who come appreciate the fact that the management is doing all in its power to accelerate matters.

Let not your readers be frightened at the wild reports of high charges for living in this city. The writer called on Wolz & Moulton, 23 Carondelet street, who act as commissioners between the hotel, boarding house and "rooms to let" people, and was informed that the average price paid by visitors for room and board was less than two dollars per day.

J. W. Ryckman, Special Commissioner, has written the following interesting letter in answer to many questions regarding the Exposition:

"In answer to many inquiries, as Special Commissioner to the World's Fair, I deem it expedient to submit to the press and the public a brief statement of sober facts concerning the general outlook. The Exposition is rapidly assuming completion. By January 20th, if no extraordinary obstacles are encountered, the grounds, buildings and exhibits will be in almost perfect condition, save in machinery hall. It is scarcely advisable to come here before that date. A very serious problem has been encountered, viz: with less means by two-thirds than were consumed in the preparation of the Philadelphia Centennial, the managers have been compelled to provide accommodation for the largest collection of home and foreign exhibits ever displayed at one time in the world. It is not surprising therefore, that on the completion of their task the managers find themselves face to face with a shortage of $200,000 in their requirements. They have made the funds at their disposal go a great way. That the amount has not been adequate is wholly the fault of the people whose demands for space have necessitated the building of such enormous structures and the installation of such a gigantic system of exhibits. I am confident that in less than a week the deficit will be made up and the last drawback thus removed.

Personal Mention.

Miss Kate Clayton is on a visit at Benton.

T. J. Goodale was in town last Wednesday.

Fred McAfee came in from Saline Valley last Wednesday.

C. H. Groves returned home from Sacramento last Wednesday.

Miss Mary Swan and her brother, Charley Swan, were up from Lone Pine last Tuesday.

Patrick Clinton came down from Cerro Gordo last Tuesday, and spen a day or two in town.

Mr. I. Harris returned from San Francisco last Monday. His sister whose illness was the cause of his visit to the city is so far recovered as to be considered out of danger.

Charles E. Bull left Tehama, California, May 20 1881, sick. Any information with regard to him most thankfully received by his mother, Mrs. Gertrude Bull, Eau Claire, Wisconsin.

Mr. James Sherwin has so far recovered from the hurts he received some weeks ago in Long Valley, that he is able to be around and attend to his business, but his broken arm is still weak.

Mr. Mairs, Father of O. J. and J. Mairs, of Independence, started from here to return to his home in Canada. Jerry accompanied his father and will make a three months visit among the scenes of his early days.

Mr. Thomas Sherwin arrived lately from Humboldt county, and is now on a visit with his brother James Sherwin, at Round Valley. Mr. Thomas Sherwin is likely to become a permanent resident of the county,

E. C. Kinkead, of Nevada, passed through Independence last Wednesday, on his way to Los Angeles. He had a large band of horses and three live deer, the latter to be placed in a park Mr. Kinkead owns at Los Angeles.

Mr. McFarlane, who has been visiting relatives in Independence for the past two months, left here last Thursday morning for San Francisco. He will stay but a day or two in the city and then return to his home in Canada. Mr. McFarlane was in very poor health when he came to Independence. He is now hale and hearty.

Mr. and Mrs. Gregg were very cordially received by their old neighbors at Big Pine. A party was given them last Monday evening at Hartshorne's Hotel. Everybody attended, and the welcome given the guests of the occasion was so hearty as to compensate them for the pain of leaving their friends at Independence.

BORN.

KISPERT—At George's Creek, Jan. 3 1885, to Mr and Mrs. John Kispert, a daughter.

THE PUREST GEM.

[Written for the INDEPENDENT.]

Of all the gems of rarest worth,
That e'er have blest or cursed the earth,
Though purer than the dew of heoven,
A purer gem hath yet been given.
How pure the snow, and feather light,
Floats downward from a fearful height.
It seems a waste of beauty fair,
Though purer than a Peri's prayer.
How pure the crystal brook at night,
When in the Autumn's fading light,
The sky's sky's reflected gems appear,
Beneath its surface, glassy clear.
And whisp'ring lovers wand'ring by,
Gaze on the scene and only sigh,
To think of love when pure and just,
Untarnished by the stain of lust.
How pure Sierra's mountain air,
That frees the mind from grim despair,
Expands the soul, inspires the heart,
With feelings that will ne'er depart.
And pure the moonlight's silver beam,
In threads of silver softly gleam;
The widow's tear drops, one by one,
While weeping for her wayward son;
The love of sisters, true and dear,
The joy of friendship—when sincere;
All these are pure; but God hath made,
A gem of heav'n that cannot fade.
A treasure from the throne it came,
A gift presented in His name.
And thus the purest of the pure
Created He. And, oh! how sure,
How grandly true, sublime, divine!
For he hath named it—VIRTUE.

—WADE.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 17,.....1885.

ALL SORTS.

The Bible class—Clergymen.

A tough joint—an opium joint.

A long race—the human race.

A silent partner—not a wife.

A storm scenter—The Signal Service observer.

Noah was the architect of his own fortune.

Held in suspense—the murderer on the gallows.

A vote in the ballot-box is worth two "on the fence."

The butterfly is the May of insects; the hornet is the July.

A hen on bad eggs is making a dead set that will never pay.

Those three kings could raise the deuce in Europe if they felt so disposed.

Is it any wonder that "boards of aldermen should sometimes be wooden-headed?"

Adam was a brick because he was made of clay.—[New Orleans Picayune. Sun-dried, too, we believe.

A crank is a person who does not always agree with you, but has opinions of his own.

The widow of a Hindoo is about the only individual whose career really "ends in smoke."

Dogs who go into the woods to howl should bear in mind that a good whine needs no bush.

China ought to have no difficulty in raising the wind. Besides fans, its principal product appears to be Lungs.

A farmer sent his boy to the "sugar bush" to look after the sap buckets. Presently the boy returned.

"How are they?" asked the farmer.

"W-well," the boy replied, "s-some are h-half full, s-some are f-full an' some are r-runnin' over. I g-guess they'll a-average 'bout full."

"Pa, what was that place where the procession stopped and you all went in and stood at the counter, and you hit Mr. Brown on the helmet with a glass mug?" Then the family lost all interest in the conversation and Mr. Holliday's appetite ceased, and after breakfast he invited his son to a woodshed seance for young gentlemen only, gave him a top-dressing of shingles insomuch that he could be heard at the distance of half a mile.

The Cucumber.

Among the numerous surprises which the progress of analytical science has sprung upon our modern cuisine is the announcement that the cucumber, nearly always partaken of with a certain inward misgiving as to consequences, is a digestible, wholesome food; and that, well grown and properly prepared, it may be unhesitatingly received on a familiar footing. This is something to say; for prejudice has parleyed with the cucumber in the character of a possible enemy for more than 3,000 years. Even with the memory of John Evelyn it was accounted in England as little better than poison, and perhaps no other fruit ever succeeded in inspiring the same amount of mingled esteem and dread. Among ourselves the latter feeling has till quite lately predominated; and most persons are familiar with the old-fashioned advice to "pare your cucumber carefully, and, after well peppering it, cast it forthwith out of the window into the kennel." So common was the feeling thus expressed that Gay made it the subject of a simile in a stanza of the Beggar's Opera:"

When Polly's drest with care and cost,
All tempting, fine and gay,
As men should serve a cucumber,
She flings herself away.

The Peanut Crop.

With profoundest satisfaction we are enabled to inform our readers that the American peanut crop this year promises to be enormous, in fact the largest ever raised, amounting, at a moderate estimate, to 3,500,000 bushels, while, if the weather should continue favorable, it may mount to the unprecedented figure of 4,000,000 bushels, a gain of thirty-three and one-third per cent. upon the best yield of any previous year in our industrial history. The American peanut exerts an important influence upon the American people, and the larger the crop the more potent, naturally, would be the influence.

The Intelligent Rat.

"I think that a horse is the most intelligent animal," remarked Col. Yerger.

"No, sir, the horse is not. The rat is the shrewdest and smartest little animal I know of. It has a wonderful power of discrimination. The rat never sets fire to a store by nibbling at matches until everything is insured for more than its value. A rat who is in that line of business is sharper than a fire insurance agent with a sixty-ounce brain and thirty years' experience.

A Brightening Prospect.

Said an old woman to her seat partner, on hearing a mortuary topic suggested: "I've been to see our family burying ground. We've been fixing it up fine—putting down new turf, making a stun an' iron fence, and getting a monument sot. There ain't only one body buried in it yet, but there's room for the hull family. Betty can't last much longer. Dan's got Bright's disease, an' I'm gettin' pretty well along in life," and she brightened up considerably at the prospect that the burial plot would not long be useless.

Keenness in a man is not always to be taken as a sign of capacity, for it is generally observed most in those who are selfish and over-reaching; and his keenness generally ends in that kind of penetration into other people's interests which will tend to benefit himself.—[A. M. Arnold.

AUCTIONING OFF A CHILD.

A Polish Mother Tries to Sell Her Baby—Probably Crazy.

Among a crowd of nearly two hundred miserable and hungry-looking immigrants who were aroused from their hard beds on the floor of Castle Garden was a poor Polish woman with an infant in her arms. After vain attempts to quiet the hungry child, the poor mother begged for a crust from some of those around her. An English woman divided what food she had with the child, and for awhile it slept again in contentment.

The woman's name was Josephine Stepelowski. She swarmed into Castle Garden with a multitude of other immigrants as poor as herself, about two weeks ago. She had very little money, and positively no knowledge of the English language, but she started out alone to look for employment. Saturday morning she came back again, poorer than ever, tired, hungry and discouraged. She went away with a warm cloak and good shoes. She came back with neither. She would not admit it, but the interpreter felt confident that she had sold them for bread.

All day Saturday and until yesterday breakfast time the woman begged enough for her child, but she never ate a mouthful herself. About noon the child grew hungry again, and cried for more food. The poor woman was in despair, as she did not know that if she would apply to the officials she would receive assistance. She had sold everything which any one would buy, and thought nothing remained but to publicly ask for alms or starve. The woman hesitated for some time, but finally she wrapped her baby up in an old plaid shawl and went out to beg among the crowds of people who constantly throng the Battery and the lower Broadway. After two or three rude repulses from men who are accustomed to being approached by importunate beggars a hundred times a day, she sat down on the grass beneath a tree and endeavored to hush her child's cries with passionate kisses. She looked as though she had seen better times than most immigrants in her situation. Going back into the Garden again she asked the interpreter how much such a baby as hers was worth in America. The man thought she was joking, and answered, with a laugh:

"Oh, about $40, I guess.

The woman went out of the door again, repeating the answer over to herself. Meeting a well-dressed lady on the street, she rushed up to her, and, with the tears streaming down her cheeks, begged her to buy the baby for $40. The lady was surprised, but made an attempt to lift aside the shawl and look into the child's face. As though frightened at what she had done, and fearful that her little one was really to be taken from her, the Polish mother uttered a cry of despair and hurried back again to the Garden. After sitting around for a while she suddenly sprang on one of the benches and screamed out:

"Who buy for $40?"

The woman acted as though she was out of her head. Her hair and her dress were disheveled and her eyes were unnaturally bright.

"Give you fifty cents!" shouted one immigrant.

"A plug of tobacco," yelled another.

For five minutes the immigrants offered her all sorts of things for her little one, from an old jack-knife to a pewter pot with a broken handle. Some of the employees of the place finally gave her food for herself and her child, and last night when a Times reporter visited the Garden both were huddled asleep on the floor, forgetful of their destitute misery. They will probably be sent back again to Poland.

"I'll tell you of another curious case which came in about two months ago," said an officer. "A young German couple came in, carrying three huge pieces of chamber crockery which they had brought with them all the way from home. Some ignorant people come here with the idea that such necessities can't be bought in America. They sold all three articles for $1.50, which, with another silver dollar, was all they had in the world. No sooner had they got to a room in a lodging-house near by than the foolish fellow went out and spent all but ten cents of it for a pistol. Some one told him he would need it to shoot the savages in this wild and uncivilized country. The couple lived on that ten cents for three days. How they did it I don't know. When the landlord went for his rent, of course the poor fellow couldn't pay him. They were on the point of being turned into the street when the wife suggested to her husband that as he had no money he might offer the pistol. The landlord did not understand German, and was ignorant of what was said.

"The young fellow rushed excitedly for his bag, which was thrown in one corner of the room, and, pulling out his pistol, thrust it towards his creditor. The landlord wholly misunderstood the motive of the act, and, believing that the poor man meant to shoot him, he hallooed for the police. The neighbors rushed in, there was a scene, and the young German came within an ace of going off to jail. A German produce dealer in Washington Market promised to give him work, he was let go, and to-day he called in to see me, feeling quite contented. Immigrants spend their money very foolishly as a general thing."

It is said that more than the usual number of idiots are hiding their watches and money in the sand when they bathe at the seaside this season, and they forget the spot.

Mr. George Bancroft, the historian, is a great lover of roses. At a recent dinner to some of his friends a Newport, the tables were decorated with roses of every variety.

Dog stealing has been reduced to such a science in Boston that a protective society against it has been formed, one man starting it with a contribution fund of $1,000.

SALOONS.

IRWIN'S SALOON,

Cor. Edwards & Market Streets,

Independence, - Cal.

THE PUBLIC GENERALLY ARE respectfully invited to call and inspect my establishment, which has been entirely refitted and furnished in a style second to none on this side of the mountains. A SPLENDID NEW BILLIARD TABLE provided for the amusement of patrons.

MISCELLANEOUS.

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST."—Planned by HORACE GREELEY, LL. D.

All our greatest institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown Universities, Cornell University, Amherst, Dartmouth, Rochester, Madison, University of California, etc. Thousands of our greatest schools have declared it to be THE BEST. It is not only the BEST CYCLOPÆDIA, but is a whole library of UNIVERSAL KNOWLEDGE in the form of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. R. Spofford, Librarian of Congress, Washington, D. C.: "Johnson's Universal Cyclopædia is a work which is found in the Library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL. D.

"By far the best," etc.—Hon. Alexander H. Stephens, LL. D.

"The best we have," etc.—Hon. Wendell Phillips, LL. D.

SOLD BY SUBSCRIPTION ONLY.

For particulars to obtain or sell it, etc., address,

C. W. LIBBY,
General Manager Pacific Coast,
MARYSVILLE, - - - - CAL.

Send in your orders by mail for the holidays to Mr. Libby, as above.

HELP for working people. Send 10 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, of all ages, grandly successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed in their first hour. The broad road to fortune opens before the workers absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY!

It is a never failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhœa, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.

The Preacher and the Buttons.

An evangelist from the far East made a tour of Texas recently for the purpose of saving some of the desperate denizens of the Lone Star State. He opened his first meeting in what is known in the State as "tough town." About thirty hard-looking male citizens comprised the audience. After the good man had discoursed a little and sung several revival hymns, he requested that a collection be taken up to carry him further into the State. A tall and fierce-looking Texan, armed to the nape of the neck, passed his sombrero around, with the significant remark:

"Give liberally, boys; you've seen the show, and we ain't the men to beat any showman."

The result was that every man contributed something, and when the hat was passed to the evangelist he examined the contents and then remarked:

"I find in this hat $4.15 and two overcoat buttons."

"That ain't a squar' deal," yelled the fierce-looking man who had taken up the collection, as he mounted the chair. "The man who put them buttons in the hat will redeem them at 50 cents apiece, or there'll be the deuce here in the toss of a cent."

"Make no disturbance, my friend," pleaded the evangelist, holding the supposed buttons in full view. "I will—"

A shout and considerable laughter cut off the evangelist's remark, and the tall man, without dismounting from the chair, said:

"Mister preacher man, you're clean off on overcoat buttons; them are chips, good for fifty cents' worth of licker in any gin mill this side of the Rio Grande. They'll also git you cooked grub, stranger, if yer appetite needs it."

The explanation was satisfactory, and the meeting closed.

The Dress of Nova Scotia Women.

The young girls array themselves in hats and costumes which are only two or three years behind the prevailing mode; but the attire of the middle-aged and elderly women is striking and peculiar. For Sundays, this is invariably black throughout, and yet does not look funeral. The dress is plain bombazine or alpaca, a shawl folded square, and over the head a large silk handkerchief, which must be put on with great exactness and care to make just so many folds at the sides, with a huge knot under the chin; while the point at the back hangs below the neck and generally has one or more initials neatly worked in colors ("cross-stitched") in the corner. As most have clear olive complexion, with rich color in the cheeks, and lustrous black eyes, this head dress is surprisingly becoming, giving quite a gypsyish effect. The women in large square yoke, into which eight or ten breadths of material are closely plaited—this unweildy garment completely enveloping them from head to foot. These distinctive features in costumes are disappearing, and ere long our American peasantry may become more commonplace and uninteresting. Let us hope that they may never lose the sweet simplicity, frankness, honesty, thrift and other pleasing characteristics which they now possess.

The Locomotion of Shells.

The great conch or strombus has a veritable sword that it thrusts out, sticks into the ground, and by a muscular effort jerks itself along, making a decided leap. The squids, that are the brightest forms of mollusks, leap entirely clear of the water, often several feet. They are the ink-bearers, and from their ink bags comes the sepia used by artists, while their bone is the cuttle-fish bone of commerce. Many of the cockles have a method of flying through the water that is quite novel. They are generally beautifully colored, and have long, streaming tentacles, and suddenly, without warning, they dart up from the bottom, and by a violent opening and shutting of their valves, rush away, with their long, reddish hair streaming after them, presenting a very curious appearance. The shell known as the Lima Nians is particularly remarkable for these flights, and all the scallops are jumpers and leapers. When placed in a boat they have been known to leap out, and the ordinary scallop has been known to jump out of a pot when placed upon a stove. A description of the different methods by which shells move, would fill a volume.

ABOUT DIVORCES.

Why Women Figure Most Frequently as Plaintiffs.

"About two out of three of all the divorce suits brought are instituted by women," said a prominent lawyer, "and the causes for it are numerous and curious. You wouldn't think, now, that women would have more of the aggressive spirit and pluck necessaro to go through with divorces than men, but they have. Most people are apt to imagine that men are the ones to bring their troubles into court; that they are by nature likely to choose a bold surgical treatment, as it were, and get their marital troubles ended completely. It is easy to picture a timid women cowering at the thought of lawyers and courts, and preferring anything to the publicity of the Common Pleas. But all that is sentiment and exactly contrary to all experience. It is the men who shrink from the divorce courts."

"How is that?" was asked.

"First of all," explained the lawyer, "there is the question of expense, which to a man in moderate circumstances means a great deal. When a man brings a divorce-suit he does so with his eyes open to the fact that he will not only have to pay the fees and expenses of the lawyer retained by him, but also the counsel employed by his wife. Now, when a woman resolves upon a separation, if she has any good reason for it, she has the comforting conviction that it is going to cost her nothing. In four cases out of five, where the woman is the plaintiff, the counsel exacts, say, a preliminary fee of $25, and it is on the distinct understanding that, in the event of the application being successful and the husband being mulcted in costs, the money is returned to her. So you see that in the financial aspect of the question the woman is at an advantage.

"Then," the lawyer went on, "the woman feels her wrongs much more than the man. Mr. Blank bears the situation sullenly, but very well. When he leaves the house in the morning he bangs the door spitefully after him, and in a few moments is wrapped up in the thousand and one interests of the day. Now, Mrs. Blank hears that spiteful door-bang and broods over it, and is mad all the morning because she can't reply to it. The house is her world, and everything about it suggests Mr. Blank, and, of course, unhappiness. Now, Blank is a devil-may-care sort of a fellow. He gets drunk at his club, and comes home or stays away just as he thinks fit. The world says nothing. When he feels mad he can go to his home, break up the furniture, and swear at his wife until he gets tired, and then can rush out of the front door. But when his wife is aggravated, and feels like annoying Blank, where is he? That's the question! In all probability he is having a rollicking time out somewhere.

"Now what does all this lead to?" he continued, energetically. "Well, I'll tell you. The woman soon begins to seek for sympathy among her feminine friends, and she gets it every time—I don't want you to make any mistake about that. This sympathy-seeking is responsible for half the marital litigation. It doesn't take long for the lady to magnify her troubles, and then her friends make a martyr out of her, and cause her to believe that she is the most interestingly ill-used being on earth, while in all probability she is nothing of the kind. This ends, sooner or later, in a visit to the divorce lawyer, and that settles the business. A man doesn't go and relate his troubles to his friends as a woman does. If he did the proportion of masculine and feminine plaintiffs would be more even. It is the custom of the husband to let confidences about domestic matters severely alone, and so he doesn't receive any advice which would bring him within the grasp of the legal profession. You can see how disproportionate the figures are when I tell you that for the December term sixty-four divorce suits have been entered in the Common Pleas Court, and that of these forty-four were instituted by wives, and only twenty by husbands. That, I calculate, is the usual ratio.

"Most of the divorce suits brought nowadays are for the absolute annulling of the marriage. The courts have greatly discountenanced divorces with alimony. Those cases where the wife wants support continued are now generally sued out in the Desertion Court. Lots of wives who commence with the idea of obtaining divorces end up in the Desertion Court highly satisfied. A divorce cannot be got for less than $85—that is the point to which competition has brought it down. In cases where the husband has to pay the wife's counsel, the fee allowed by the court is $35 and $50. That's nothing, though, compared with a case I know of, where a husband some years ago, obtained a divorce from the Legislature. He was rich, and it cost him $150,000. One member there, he told me, got $10,000 to vote for the bill. Seven months after the passage of the act, the divorced wife died, and the husband didn't give up kicking himself for a year. His freedom had cost him just $21,428.50 per month. He had imagined that his wife was going to live for years. Nowadays the Legislature can't grant divorces for causes that would justify the victim in applying to the courts."

When ignorance is bliss it is folly to ask the landlady what she puts in the hash.

An Old Story of Daniel Webster.

Every one who has read George Ticknor Curtis' "Life of Daniel Webster" will remember John Taylor, Mr. Webster's tenant and factotum at Franklin, N. H., and Robert Wise, the old revolutionary soldier who came home from the war with Captain Ebenezer Webster, Mr. Webster's father, and built for himself a little cottage on one corner of the Webster farm, where he lived and died. Skirting the Webster property, and passing by the spot where Robert Wise took up his humble abode, there had long been a ferry-way, leading to a ferry across the Merrimac river. The ferry was established during the last century, and after Robert Wise had lived there for some time it came to be called Wise's Ferry. The ferry-way was originally fenced on both sides, and it ran between Webster farm and a farm belonging, at the time of which we are about to speak, to Deacon Farley. The fence on Webster's side of the ferry-way had been allowed to fall into decay, but the fence on the Farley side had been well kept up. In the year 1848, after a bridge had been built across the river, the town voted to discontinue the ferry-way and the ferry, and the land reverted, of course, to the original owner. Deacon Farley, assuming that the land belonged to himself, removed all traces of the fence on his own side, and included the whole of the land in his own territory up to the line where the Webster fence formerly stood.

Mr. Webster came up to Franklin soon after this had been done, and was greatly incensed by what he saw. He ordered John Taylor into his sitting-room and said to him sternly: "John Taylor, how came you to stand still and let Deacon Farley steal my land?" Mr. Webster was in one of his blackest moods. Poor Taylor was frightened, for in all his life he never had seen his great friend in such a towering passion. Mr. Webster ordered him, in tones of thunder to bring Deacon Farley.

The deacon came, and he, too, was saluted with a burst of wrath that made him tremble. He modestly replied that he believed the land was his; but Mr. Webster could not be pacified.

Thereupon the deacon and John Taylor jumped into a wagon and drove in great alarm to see a young lawyer by the name of Pike (now Senator in Congress from New Hampshire), who lived two and a half miles up the river. They told Pike he must go down and see Mr. Webster and explain the matter.

Pike went, but as soon as he was in Mr. Webster's presence the latter roared out: "Young man, did you advise Deacon Farley to steal my land?"

"No, sir," said Pike, "I did not. But if the statements that were laid before me are true, the land belongs to the deacon."

"Well, sir," replied Webster, "if I can find a lawyer in this county, I shall bring an action."

"There is no need of that, Mr. Webster," said Pike. "I will get the proper documents and submit them to you, if you will hear me, and I believe that you will be convinced that the land is not yours."

"You are a bold man, sir, if you propose to leave the case to me," said Mr. Webster. "But do as you please. I give you fair warning that I consider this land mine, and I will fight for every inch of my father's property."

Pike went away and procured a copy of the record which showed the laying out of the ferry-way, and that all the land was taken from the property of Farley's grantor, and none of it from the Webster property, a copy of the vote of the town discontinuing the ferry, and an affidavit of a former tenant of Webster's showing that the fence on the Webster side had been removed, and the whole ferry-way taken into the Webster field. The strip of land which the discontinuance of the ferry-way took off from what Mr. Webster had already regarded as his own property extended the whole length of one of his best fields.

When Pike submitted the documents to Mr. Webster, the latter read them very carefully, and then said: "Mr. Pike, in half an hour the jury will be ready to render their verdict. Go and get Deacon Farley, that he may hear it."

In half an hour Pike returned with the deacon, who expected nothing but a repetition of what he had met before.

"Gentlemen," said Mr. Webster, "harken to the verdict. The jury find that the land is Deacon Farley's and it not the land of Daniel Webster. So says the foreman, so say all the jury. And now, Deacon Farley, I have an apology to make to you for having treated you so roughly. But I never dreamed that this land was not a part of my father's farm, and you know what my affection for this property is. I was very angry, but I hope you will excuse me."—[Harper's Monthly.

What the Orator Needs.

A good speaker should have the position, the pose of a singing bird, his gesture follow the curve cut by a flying swallow, his tones and emphasis should be such as a pleading child uses or a morning wind; his carriage that of an Indian walking in the forest. Nature, by the sounding sea, taught the Greek eloquence, and to the painter all are inclined in "water colors."

A white woman carried her dead child wrapped up in a sheet into Athens, Georgia, in order to get its measure for a coffin.

A GREAT TRAVELER.

Adventures and Discoveries of Col. Prejevalsky in Central asia.

Russia is after Asia all the time, the assurances of Russian diplomats to the contrary notwithstanding. It is enough to say that during the last quarter of a century the Czar has conquered and annexed to his empire in Middle Asia a territory of about 3,000,000 square miles, having over 5,000,000 inhabitants. European Russia constitutes to-day but a quarter of the Czar's possessions, although his European subjects six times outnumber his Asiatic subjects. It seems as if the Czar were preparing an immense territory for a future Russian empire of unexampled magnitude. Be the cause what it may, it is a fact that Russian diplomats, generals, merchants and servants, are all looking eastward. Curiously enough, the Russian Generals of to-day, who have made themselves famous by their conquests beyond the Caspian Sea, have carried out the plan of Peter the Great. Russian merchants who are now penetrating the very heart of Asia are only continuing the business of their forefathers. Russian missionaries, who both precede and follow the Russian conquerors in Asia, are only fulfilling the behest of the Russian monks of olden times to erect the cross in Asia. Even Russia's learned travelers to-day are only retracing the steps of their countrymen who explored Asia centuries ago.

Of the Russian travelers in Asia, Col. Prejevalsky certainly stands foremost. Now he is again in Thibet, on his fourth Asiatic expedition. According to his latest letter Prejevalsky, with his party of fourteen men, is exploring the sources of the Yellow river. In August the Colonel intended to try once more to penetrate Lhassa, which no European is allowed to enter. This time, as in former expeditions, the Colonel keeps his party constantly on a war footing. They never part with their Berdan rifles and muskets, and they keep sentinels posted night and day. So far they have met no obstacle, but it is not likely they will continue to be let alone by the barbarous tribes inhabiting central Asia.

In his capital work, "A Third Journey in Central Asia," which has been lately published here, Prejevalsky gives a full account of the tribes and places he visited in his third expedition. His idea was to penetrate the very heart of Thibet. What he could not accomplish in that expedition he intends to do now. In his third expedition Prejevalsky's party consisted of thirteen men. "Our happy journey," he says, "ought to convince superstitious people of the injustice they do to the number thirteen, otherwise called the devil's dozen." For nearly two years the party traveled through some of the most desolate places upon the globe, yet all the men safely returned home.

The desert of Gobi, or Shamo, is described by Prejevalsky as a vast region destitute of any sign of life. There is no vegetation of any kind, no animals whatever, not even insects. It is an ocean of sand, covered with gravel and pebbles, and occasionally rising in hills and plateaus. The Russian travelers often noticed the dry bones of camels, mules, and horses, and occasionally of men. Over the heated ground hangs a motionless and dusty atmosphere. Occasionally, however, here and there hot whirlwinds dash across the desert, raising big columns of salty dust. Mirages are common. In the middle of the day the ground was heated up to 140 deg. Fahrenheit.

The Russians not only failed to get any assistance from the natives and the Chinese authorities, but were continuously deceived and misled by them. The local petty princes caused much annoyance and trouble to the travelers. The Colonel soon found a way to bring the princes to terms. He usually refused to talk with them at all, but, pointing on one side to his Berdans, and on the other to Russian gold, offered them their choice. The Asiatics promptly showed their preference for the gold. The princes, with their own hands, picked out the sheep for the party, trying always to catch the worst animals in the flock. They also measured out the barley, which they keep in pits. Every time a little wooden measure appeared from the pit full of grain, the Prince shouted "One!" and all his suite solemnly repeated "One!" "My Cossacs," says Prejevalsky, "laughed at this procedure until the tears stood in their eyes. It is almost incredible," he adds, "that the whole of Central Asia swarms with this sort of Princes and Kahns. However petty these potentates were, they delayed the party for days at a time, over the sale of provisions and camels, or the hiring of a guide. The Russians found that, of all the presents they could give the natives, electric batteries and colored pictures of actresses possess the most charm for them.

In northern Thibet the storms and hurricanes are terrible. The author explains them by the very rapid heating and cooling of the ground and air, which takes place there. Once he took the temperature at the same time on the sunny side of his tent and on the shady side. The former was 61 deg. and the latter 18 deg. The summer is very rainy, and the rest of the year is very dry, so much so that the grass turns into dust, and the animals instead of picking their food have to lick it up. Nevertheless, large animals abound there. "In no other place on our globe," says Prejevalsky, "with the exception, perhaps, of the interior of Australia and Africa, can one find so many animals as in northern Thibet. Sometimes for days we saw herds of yaks and flocks of antelopes, containing hundreds of individuals, grazing without the least fear of man, their most cruel enemy."

In the Thibetan mountains the Russians had to defend themselves from robbers. These appeared in parties numbering from twenty to seventy, armed with swords and guns and slings. The Russians, however, never gave the robbers a chance to attack them, for with their Berdon rifles they kept them at a distance of 1,000 feet, whence the arms of the robbers were useless. The natives of Thibet somewhat resemble gypsies. They never cut or comb their hair. The women are a shade lighter than the men, but are rather ugly in feature. They arrange their hair, in small braids, ornamented with corals, little bells and copper coins. Both men and women wear sheepskin cattans and leggings. All the men carry swords. They live in tents covered with hair-cloth of their own make. Mutton and sometimes yak meat are their principal food. They eat their meat uncooked. "Each person, says Prejevalsky, "sitting at the hearth is served with a piece of meat. The head of the family throws the pieces right and left as if to dogs. Every member of the family then unsheaths his knife, cuts his portion into [illegible] pieces and devours it." The Thibetans raise cattle, yak, sheep, goats and horses. Their horses, though small, are remarkable for strength and endurance Instead of corn, they are fed upon dried cheese, and even meat. "I never met an honest and upright Thibetan," says Prejevalsky. They practice polyandry, one woman having two, three, and even four husbands. Well-to-do men, however, have one or two wives.

Some of the customs of the Thibetans are very curious. At parting a junior person takes off his cap, bows, and puts his tongue out. They pull their cheeks in order to show surprise. Turning up the big finger means approval, and turning up the little finger means the contrary. The rest of the fingers signify an indifferent quality of thing or person. All the men and women smoke. The nomadic Thibetans do not bury their dead, but throw them to wild beasts and birds of prey. In the capital of Thibet the clergymen decide as to the disposal of a dead body, whether it shall be burned or thrown into a river, or buried, or left as a prey for beasts and birds.

The nearer the Russians approached Lhassa, the capital of Thibet, and the residence of the Dalay-Lama, the pope of the Thibetans, the more opposition they met. At last, at the distance of 170 miles from the capital, they were met by a regiment of armed men. The natives believed that the Russians wished to kidnap the Dalay-Lama and to abolish their religion. Prejevalsky had no choice but to turn back. Although the Russians were not allowed to visit Lhassa, yet their journey is regarded here as highly successful, for Prejevalsky had opened a new road to Thibet. The Colonel is of the opinion that the Shamo oasis, which he has described in detail, would be of great military importance in case of a war between Russia and China. On their way home the party went to the sources of the Yellow River, where they saw some tribes never before described. Among them are the Khara-Tanguts, who pass their lives in robbery, murder and prayer. The praying is done by machinery. The prayers are written on hollow cylinders turned by water wheels.

During his three journeys Prejevalsky traveled about 15,000 miles, and collected 90 species of mammalia, 400 species of birds, 50 species of reptiles, 53 species of fishes, and 1,500 species of plants.

Good Riddance of Rats.

Rats and mice are a natural and unavoidable punishment for neglect, carelessness, or want of skill. I once went on a farm so stocked with rats that they fought and squealed with the pigs for a share of their food, and at times drove away the pigs and took possession of the troughs. I raised the floor of the pig-pen eighteen inches above the ground, and laid it tight with hemlock plank. Every hiding-place inside and outside was removed. The corn-crib was set on capped posts, and wire netting was nailed around the bottom and the eaves. The sheep-pen was cleared of everything that could harbor vermin. The horse-stable and cow-stable were paved with cobble stones covered with cement and gas tar, and everything was left open. The barn was built on posts eighteen inches above the ground, and the floors were made tight everywhere. No place was left to the rats and mice, but the doors to go in at, and, except the barn, no place was left to hide in.

Then half a dozen cats were raised and fed at milking time with regular rations of milk. If one came to the house it was shown the broom. For years there was not a rat to be seen; some mice came in with the grain or corn from the fields, but they had a short time before the cats had picked them up. I could never tell what I saved, because I never knew what I lost. But I saved myself a great deal of worry; the bags were free from holes, and the corn in the crib smelled no more so foully of rats and mice. There is nothing better to protect grain and meal bins than broad hoop iron nailed on the edges on both sides, inside or outside, as may be most convenient; and hemlock plank should be used to build them of because of its sharp, splintery nature; and, perhaps, this device might be safely used even with the other means of prevention.—*Tribune.*

A St. Louis physician says that the common house fly is heavily loaded with trichinæ.

INDEPENDENCE, CAL.:

SATURDAY, JANUARY 24, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

THE New Orleans Exposition is reported to be in danger of total collapse through want of capacity in the managers.

THE business depression that now prevails in the East is worse than has been since '72 and '73. Many thousands of men are out of employment and there is much destitution and suffering. Here in Inyo county there is no such thing known as suffering for want of the necessaries of life.

MEADOW LARKS singing by the hundred in great, widespreading, grassy plains; the shouts and laughter of happy children in the bright, warm sunshine; these are features of Owens Valley that now offer a pleasing contrast to deep snows and bitter cold that prevail over the whole of the Eastern States.

A BILL was introduced in the Legislature of Nevada authorizing the Governor to appoint three Commissioners to the Silver Convention at Denver. It was rejected unanimously. It has since been decided to hold a Convention for the discussion of the question at Carson on the last day of the present month.

RECENT discoveries of mineral wealth show that the section of country between Los Angeles and the Colorado river has not been thoroughly prospected. In fact, it is evident that Idaho, Nevada and Arizona have been more carefully prospected for minerals than the great mineral regions in Southern California, within fifty or one hundred miles of Los Angeles. The development of the mineral wealch of Southern California has but just begun.—*Mining & Scientific Press.*

LAST Sunday morning an asylum for the insane, at Kankakee, Illinois, was burned. The building was occupied by 45 patients and one nightwatchman. Seventeen of the patients are missing and 13 bodies have been recovered. Every few days an orphan asylum, or an asylum for the insane, is burned up, and in nearly every case many of the unfortunate inmates are roasted to death. So common has this class of fires been, that it might appear these institutions are contrived, not so much for taking care of the inmates, as for sweeping them out of existence, and so getting rid of them.

No espirant for the position ever seemed more certain of gaining the Presidency than Scuyler Colfax. He had shown much ability, but belief in his strict integrity was what won him most friends as a public man. The revelations of Oakes Ames, that connected the name of Mr. Colfax with corrupt legislative jobs, shattered that belief, and from that hour all political influence was gone. No man can long retain the confidence and support of the American people who is not pure and honorable in all his official actions. Men trust and honor strength, but despise weakness. If Ames told the truth Colfax was weak.

IN HIS message to the Legislature Governor Stoneman reports that for the thirty-fourth and thirty-fifth fiscal years of the State the expenditures were $8,591,009, or $2,212,244 less than for the thirty-second and thirty-third fiscal years, and the reduction of expenses has enabled the reduction of taxation to be made, so that it is now only 45.2 cents per $100, as against 49.7 in 1883, 59.5 cents in 1882 and 65.5 cents in 1881. The Governor suggests that the Legislature protest against the Mexican and Spanish reciprocity treaties and urges an enlaged appropriation for the support of the State Mining Bureau. The two treaties mentioned in the message would, if ratified, be very injurious to California. The Mining Bureau has already done much for the mining interests of the State, but could have accomplished far more if a liberal instead of a niggardly appropriation had been made for its support.

THE third Annual Report of the Immigration Association of California has just been issued. The following extract will give an idea of some of the good work the Association is doing. "The value of the service rendered the State by the Association is to some extent reflected in the record of land entries of government land during the year. From the different district land offices we learn that these entries aggregate 7,252, comprising an area of 993,570 acres. This is a pretty conclusive refutation of the statement confidently made, and often repeated, by old Californians, that there is no good government land in the State." The expenses of the Association are met by voluntary contributions and during the past year amounted to $11,660.80. In Owens valley there is an area of unoccupied land equal in extent to about one-third the total amount of entries in the State for the year as shown by the figures quoted above.

LAST Friday at Carson "Doc." Benton shot a man named Timothy Duffy, inflicting a very serious if not fatal injury. The cause of the shooting is involved in obscurity. Duffy was in Benton's house at the time. The latter was admitted to bail.

A CAPACILY to talk is often mistaken for knowledge and wisdom. Barnes the leading counsel for Sharon, is a very talkative man and has long been credited with much shrewdness and ability; but Tyler has duped him so grossly as to inspire profound contempt for his understanding.

THE Grand jury of Washoe county, Nevada, complain sorely in their report of the weight of taxation, and "request the members of the State Legislature from Washoe county to give all possible aid to such legislation as will decrease expenses of the State Government, either by the consolidation of State officers, doing away with deputies in office, or by reduction of salaries." The people of Inyo county are not alone in asking relief from the burdens imposed by extravagant salaries to public officers.

A BILL has been passed in the House of Representives for the establishment of a branch United States District Court in Southern California. The proposed district contains over 60,000 square miles. The bill is likely to pass in the Senate. The great distance of every part of the district from San Francisco causes such heavy expenses in witness fees, transportations, current expenses of witnesses while attending trials, and other expenses of litigation, render the costs of most cases entirely beyond the reach of people in moderate circumstances, thus compelling a large proportion of the population of Southern California to forego their legal right and the protection of the law.

NO BILL has yet been introduced in the Legislature for the amendment of the marriage law of California. As the law now stands it gives positive encouragement to the grossest wrong doing. It would actually be better to repeal the law altogether, and have no enactments on the subject, than to allow the Statutes to remain as at present. The spectacle presented by the Hill woman and Sharon is enough to show how urgent the need is for an amendment to the law. She is using it to aid her in the commission of a gigantic robbery; and he is using it to aid him in the commission of the grossest immorality. No law should remain force one hour that will aid a scoundrel in committing the greatest wrong that man can inflict upon woman; and just as little should it aid an unprincipled adventuress to masquerade as a virtuous woman while giving soul and body for money.

THE action of the Republican members of the State Senate, in voting for a Democrat for the position of President of the Senate pro. tem. is much to their credit. It is as much to the discredit of their opponents, that a wretched faction wrangle should hinder the whole Legislature from attending to the duties for which they had been elected. The present condition of the law on riparian rights is such as to threaten destruction to millions of dollars worth of property, desolate thousands of homes, and offer the most serious hindrance to the future development of the State. The proper settlement of this difficult matter will require the most careful deliberation; the need for such settlement is pressing; yet instead of giving every hour o their time to this and other very important questions, the Senators waste day after day, squabbling over their own contemptible personal jealousies and ambitions, in which the public have no interest.

ON the distribution of Federal patronage in California, a *Call* correspondent at Washington writes: Justice Field has, it is said, decided to enter the list against Henley for the control of the California patronage. In fact, the fight at the Stockton Convention has been transferred to Washington. The convention instructed the delegates from California to the Democratic National Convention at Chicago to vote against Field, and the Justice, it is asserted, has determined to be revenged upon his enemies. Pacific Coast gossips in Washington, say that Field has served a notice upon Henley that he proposes to have something to say about the filling of the California officers. It is reported that some time ago Henley was invited to meet the Justice at the latter's house, and that they had a conference upon the subject. Field, it is said, told Henley that he proposed to do all in his power to prevent the men who engineered the Stockton convention from holding office under the new administration. Henley told Field that he had stood by the action of the Stockton convention in the last campaign, and that he did not propose to allow, if he could prevent it, his friends to be slaughtered. It is not likely that any conferences will be held in the future between the Justice and Mr. Henley on the subject of California's patronage.

RICHARD OLDS, at the bottom of the Star of the West mine, Butte City, Montana, gave the wrong hoisting signal, when the bucket turned with him and he fell out, alighted on an upright drill which ran into his body, killing him in a few hours.

THE re-election of John P. Jones to the United States Senate was a foregone conclusion. The State of Nevada may well be proud of such a servant; he is needed now more than ever, as the silver interest is threatened with unfriendly legislation. California has not less reason than Nevada to wish for the continuance of Mr. Jones in the Senate.

THE report of the State Board of Equolization, comprising a volume of 121 pages, contains much valuable information and many useful tables. The viticultural report shows that the gallons of wine made in 1883 was 7,966,367 boxes of raisins, 130,787; pounds of grapes sold for market use, 31,038,634. The acreage of wheat raised in this State last year covered an area over twice as large as that of the combined States of Rhode Island and Delaware.

Items of Interest.

Seaweed tea is an anti-fat.

The iron trade of Great Britain is greatly depressed.

The Duke of Argyll says the world is ten million years old.

The Emperor of Austria has the finest collection of pipes in Europe.

"Polecat College" is the name of a school situated near Sparta, Ga.

The large Italian ironclads are now pronounced utterly unseaworthy and unwieldly.

Alabama's coal fields, as yet practically untouched, are half as large as those of England.

American railroads use more than 10,000,000 iron car wheels. Four wheels weigh one ton.

The St. Louis Post-Dispatch says tobacco chewing is becoming a habit with many women in that city.

French journals allege that merchants in China have tried hard, since the Tonquin difficulties, to export poisoned tea to France.

A diphtheriatic child in Baltimore coughed in the face of Dr. Melville Taylor, and he died of Diphtheria himself a few days later.

The managers of the New Orleans Exposition are trying to secure the services of the famous band of the English Grenadier Guards.

In one of the mountain counties of Kentucky a woman has held the office of Justice of the Peace without legal authority for the last ten years.

A farmer's boy of 18 in Washington Territory became so despondent because he could not raise money enough to go to the circus that he hanged himself.

Two steamers sailing from New Zealand with cargoes of frozen beef have caught fire in their freezing chambers, presumably from the volatile liquids used to produce the cold.

A Chicago negro stabbed a wooden tobacco sign, believing it to be alive, and on being arraigned in court next morning, swore that the figure had called him insulting names.

Alberta Tyson, aged four and a half years, died in the Camden Town district of London from the bite of another little girl. The right arm was bitten, and blood poisoning resulted.

The Missouri father did not pursue his eloping daughter, but sent a clergyman on a swift horse to overtake the couple, in order that the marriage ceremony might be properly performed.

The death, at 46, from heart disease, of a famous English boating man, Mr. Risley, has excited attention. A famous Oxford doctor always strongly denounced boat racing as leading to this.

The truth as to a crime near Cork has been found at the bottom of a well, though hidden by a big stone, which, being dropped in after the bodies of two murdered persons, fitted so tightly that it had to be broken with sledges.

Prof. Josiah P. Cooke pleads for placing science on an equality with the study of Greek, and is persuaded that in a large body of politic like our own it is unwise, and in the end futile, to protect any special form of culture at the expense of another.

An immense dog, a cross between a mastiff and a St. Bernard, savagely attacked a young man at Edmonton, England, and would have killed him had not his sister come to the rescue. The girl fought the beast courageously and desperately, and was terribly bitten, but she conquered him.

The waiters at a popular seaside hotel this summer were nearly all college students. They formed a well-organized Trade Union the first week of the season, and when the proprietor endeavored to fine a waiter for breaking a pitcher, made a strike. It lasted for thirty minutes, when the fine was remitted.

A curious result of the flood in the Chippewa river is that many of the farmers, disgusted by the ruin of their crops, prefer to go further west, and break new ground, rather than stay on the scene of their heavy losses. This is a matter of sentiment purely, and all the business considerations are against it.

The frenzied prediction by a woman on a Missouri railroad train that an awful accident was impending might not have scared anybody had she not immediately afterward fallen from her seat dead. Most of the passengers quit the cars at the next station, but nothing happened to those who continued their journey.

A St. Louis man 25 years of age is the victim of a queer mania. He firmly believes that he is 70 years old. There are some equally queer cases in Philadelphia, the victims being women who are 70 years old, yet firmly believe they are 25.

The Relations Between Food and Temperature.

A series of experiments made by M. Ch. Richet upon rabbits shows, far better than the bald statements usually given, the relations which exsist between the quantity of food required by an animal and its power of maintaining its normal temperature, also the need of a covering, natural or artificial, as a protection against cold. Two rabbits are placed in a cool chamber (between 50 degrees and 60 degrees F.) The larger and heavier of the two was kept constantly shorn, and the weight of food which each consumed was ascertained daily. For two weeks the shorn rabbit resisted the cold eating every day at least one-third more than the unshorn one. After two weeks the organism of the shorn rabbit became unequal to the task of producing heat, the temperature fell, and on the nineteenth day the animal died. During this short period it had lost more than one-sixth of its weight. Abundance of food and warm clothing, are, therefore, the necessities of a cold climate: but—and this is the great reason why the natives of a temperate climate succumb in a hot one—not only light clothing, but still more a light and not too nourishing diet are essential to health in hot weather or in a tropical region. As E. Richet puts it, "It is no exaggeration to say that an Englishman eats ten times as much as a Hindoo, and if, when in a hot country, he persists in the same regimen, he eats ten times too much."

Giving Way to Moods.

It is unphilosophical and wrong to yield to moods. They rob life of much of its enjoyment. The mind is as amenable to the will as is the body. The most productive mental workers in all departments, are those who have their faculties under discipline, and who go regularly to their mental tasks and compel the obedience of the mind. To those who habituate themselves to this, and hold moods under control, there is no difficulty in performing prescribed tasks at allotted times. And such persons endure longest, because of the regularity of habits. Moodiness is, indeed, a form of disease. It draws on the nerves, and gradually leads to nervous prostration. When it controls the will it has gained headway that is very dangerous. And thus its natural tendency is to injure health and happiness. To repress and overcome it is to suppress a form of disease, which in its fuller developments is distressing and dangerous.

Quick Runs by Steamboats.

The Pilgrim is capable of making twenty miles an hour, but we do not run her at that speed, for it would bring us to our pier at Fall River at too early an hour. At present her speed is about sixteen miles an hour. By the way, there have been some notable runs made by some of our river and sound steamers. As far back as 1852 the steamer Reindeer ran from New York to Hudson, a distance of 116 miles, in 4 hours, 57 minutes, and made five landings. In 1861 the Daniel Drew was only 7 hours and 51 minutes in covering the distance between New York and Albany, 146 miles. She made nine landings, too! Her average speed was 22.3 miles per hour. In 1867 the Mary Powell made the run to Poughkeepsie, a distance of 74½ miles, in three hours, with six landings. These, I believe, are the best runs on record in America, and probably will not soon be beaten.

Mrs. Vanderbilt's last bonnet cost $1,000.

There are more unmarried blondes than brunettes. It is not believed that it is the fault of the blondes, though.

Out in California when a man has kicked his wife out of bed three times she is entitled to a divorce.

There is a girl in Turner, Me., who smokes, chews, shaves, swears and wears a man's hat. What more could she do to entitle her to the right of voting?

The champion widow lives in Iowa. She sees that the graves of eleven husbands are kept green. She takes no note of men but by their loss.

A woman in Fultonville, N. Y., is said recently to have forgotten her child while she was busy rescuing a crazy quilt from a burning building. Probably she had only one crazy quilt and a house full of children.

Feeding fleas in an animal show in Paris is the occupation of Mlle. Emma. She bares her shapely arms and sets a lot of fleas free on them. They feed their fill on her warm blood, and then the are put at work again drawing carriages and cannons weighing ever so many hundred times more than their little selves.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No 221, F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensuing Masonic year as follows:

Saturday.....January 24th
"....February 28th
"....March 28th
"....April 25th
"....May 23
"....June 27th
"....July 25th
"....August 22d
"....September 19th
"....October 17th
"....November 21st
"....December 19th

Members and visiting brethren are cordially invited to attend.

LEGAL.

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARKE, AN INSOLVENT DEBTOR.

JOHN CLARKE HAVING FILED IN THIS Court his petition schedule, and inventory in insolvency, by which it appears that he is an Insolvent debtor, the said John Clarke is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clarke, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation or association for his use. The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered. It is further ordered that all creditors of said debtor be and appear before the Hon. John A. Hannah, Judge of the Superior Court, of the county of Inyo, in open Court, at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed.

JOHN A. HANNAH,
[SEAL] Superior Judge
ATEST, THOMAS CROUGH, Clerk
Dated, January 2, 1885.

STATE OF CALIFORNIA, } ss
County of Inyo. }

I, THOMAS CROUGH, County Clerk of the county of Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing order of Adjudication is true and correct as the same remains in this office.

IN WITNESS WHEREOF I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo this 21 day of January, 1885.

ORDER TO SHOW CAUSE ON APPLICATION OF GUARDIAN FOR ORDER OF SALE OF REAL ESTATE.

IN THE MATTER OF THE ESTATE AND Guardianship of Jeannette Lewis.

It appearing to this Court from the petition this day presented and filed by W. R. Tibbetts, the guardian of the person and estate of Jeannette Lewis, a minor, praying for an order of sale of certain real estate belonging to his said ward, that it is for the best interest of said ward and necessary that said real estate should be sold.

It is hereby ordered that the next of kin of said ward and all persons interested in said estate, appear before this Court on Wednesday, the Fourth day of February, A. D. 1885, at ten o'clock a. m., at the court room of this Court, at the town of Independence in the county of Inyo, then and there to show cause why an order saould not be granted for the sale of such estate.

And it is further ordered, that a copy of this order be published at least three successive weeks before the said day of hearing, in the Inyo Independent, a newspaper printed and published in said county of Inyo.

Dated December 41, 1884.

JOHN A. HANNAH, Superior Judge.

State of California, } ss
County of Inyo. }

I, THOMAS CROUGH, County Clerk of the County Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing copy of an order to show cause on application of Guardian to sell real estate is true and correct as the same remains in this office.

In witness whereof, I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo, this 31st day of December, 1884.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 24,.....1885

—There is unmistakeable evidence of returning prosperity at Candelaria; a new faro game has been started.

—Mike Murphy, the man who was shot at Aurora some time ago, died last week. Tom Keith, alias "Tex," who did the shooting, is in jail.

—A proposition for the dissolution of White Pine county, Nevada is favorably received by the people of that county. The territory would be divided between Elko and Eureka counties.

—Borax is now selling at Columbus, Nevada, for four cents per pound. When the first borax was produced there it brought the producers thirty cents per pound. There is fair profit on the business at the present price.

—Last Saturday morning a colored man, named Alexander Mathews, known as "Aleck," was shot and fatally wounded by Allen H. Davis At Tombstone Arizona. Davis was arrested and is in jail; he was already under inditement for an attempt to commit murder some months ago.

—A correspondent in Salt Lake City writes that the Courts are kept busy granting divorces. Detectives are constantly making such discoveries as ensures conviction for bigamy, and many of the much married saints are leaving the Territory to escape prosecuton. Business is very dull in Salt Lake, but saints and sinners must have amusement all the same, and two theatres are running every night.

—A correspondent writing from Butte City Montana to the Eureka Sentinel says: Th present population of the town is about 10,000, and $ 7,000,000 will not cover the assessed valuation of this (Silver Bow) county. There are some twenty mills and smelters, and these give employment to a great many men, to say nothing of the host of miners employed in the numerous properties, the monthly pay-rolls of which amount to something over $500,000. It is said the products of these mines for 1884 will aggregate from $15,000,000 to $18,000,000. The general opinion and belief here is that this is going to continue to be a prosperous camp for a long time to come. In my opinion it is the boss camp of the coast. The wages paid here, though, are not quite so good as they are in Nevada.

MASONIC MEETING.—Regular meeting of Inyo Lodge No. 221, F. & A. M., tonight.

FOUND DEAD.—Colonel John L. Snyder was found dead in his bed at Austin, Nev., on the 13th inst. Deceased was 77 years of age and a native of New York.

FELL DEAD.—John Davis, an old resident of Eureka, Nev., a man about seventy years old, fell dead last Friday morning. He had been troubled with rheumatism but felt as well as usual up to a few minutes before his death.

DITCH EXTENSION.—An extension of about four and a half miles will soon be made to the Bishop Creek irrigation ditch. Mr. Rawson has acquired an interest in the ditch, and needs the extension to bring water on to his land.

ACCIDENTALLY SHOT.—Last Sunday a young man named Charles Racey was accidentally shot and mortally wounded while hunting on the Musciepiatic Rancho, near the town of San Bernardino, in company with four companions, one of whom was unfortunate enough to fire the fatal shot.

THE STANDARD CON.—Superintendent W. A. Irwin returned from San Francisco Saturday and reports that the Standard Con. will immediately start up fifteen stamps in the Bulwer-Standard mill. The company has accumulated considerable ore, and with the improvement in the quality now being taken out will continue to mill as long as it pays.—*Free Press.*

YIELD OF GOLD AND SILVER.—From a report dated January 1st, 1885, by John J. Valentine, Vice-President and General Manager of Wells, Fargo & Co., the following is extracted: California shows a decrease in gold of $944,703, and an increase of silver of $513,597. In Nevada, the Comstocks show an increase of $1,668,524: Eureka district shows a decrease of $123,155. In the total product of the State there is an increase of $117,318.

DIPHTHERIA.—There is something wrong with the water supplied to the people of Virginia city; or tha drainage system of the place is bad. The *Enterprise* says; "Diptheria is spreading in all parts of city, and in several instances of late has proved fatal. Willie, the ten-year-old son of County Assessor George Henning, died yesterday morning of the same complaint. Mr. Henning lost a boy four years old a short time ago, and his daughter, aged seven, is now lying seriously ill. It is asserted that there are now not less than thirty or forty cases of the disease on the Comstock." This terrible disease originates in filth.

PROMISING MINES —Judge Califf, a former resident of Inyo county, writing to a friend in Independence, says of the mines at Cramer, in the Calico District, San Bernardino county: "I have not a day to spare from the mines at Cramer, for when the boom comes it must be a big one, and then I want to be rooted and grounded in the mines of Cramer. This Mojave desert is developing mines beyond all expectation, and new and valuable discoveries are of constant occurrence. I intend to finish my mining career in Cramer; if I don't succeed here it would be useless to try elsewhere; such opportunities for making money I never saw before.

Mining Items,

KEYNOT MINE.

The proprietor of the Keynot Mine, Beveridge District, Mr. L. L. Lasky of Lone Pine, says he wants to push the development of that property with all possible vigor. On the entire claim there are now nine separate openings or mines, and in these Mr. Lasky says forty-one men are now at work on the bute system. He says further a large number of miners could all be put to work on the claim with assurance of making good wages, and he will furnish food, tools and all necessary supplies to good miners, they to pay for the goods out of the proceeds of their labor in the mines. There is a good mill on the claim where ores are worked as fast as mined. A new prospect mill was also completed last week, that will work samples of fifty pounds weight and upward. A road was opened to the mine last week, and Mr. Lasky says he sent over it three and a half tons of groceries and provisions. Tom Bastian and his brother and three other partners are running an air tunnel to an ore chute out of which several hundred tons of ore have been taken that averaged about one hundred dollars per ton. The quantity of ore still in this chute is known to be very large, and when the air tunnel shall be finished, and about one hundred feet remains to be completed, this ore body will yield large returns to tributers and proprietors. All these statements are made by Mr. Lasky himself, and so far as propositions to miners are concerned, he says he is ready at any time to carry out all that is promised.

ALABAMA HILL.

For several years past a little mining has been done occasionally on rich ground in the Alabama Hills, near Lone Pine. The great scarcity of water made the operations very limited, however. Mr. S. Zaun, who owns the principal claim, has lately completed a ditch extending from the main range of the Sierra on to the mining ground. This ditch will supply an abundance of water during about eight months of each year. Mr. Zaun has been very much hindered by want of money to carry on vigorously the work of making this ditch. Patience has at last succeeded, as it rarely fails to do, and now there is a fair prospect of being rewarded for all the time and labor spent.

A NEW TUNNEL.

Last Monday A. C. Harvey and Rube Speer began work on a tunnel to open a mine about one and a half miles from the Lone Pine station on the C. & C. railroad. The ledge was first found near the top of a high cliff; here enough work was done to determine the width and direction and the quality of the ore. The tunnel will not have to be run far to strike the ledge, and will give a good depth of backs.

ORE SHIPMENT.

A quanity of ore is now ready for shipment at the Eclipse mine. It will be sent to Selby and Company, San Francisco, and is fine smelting ore.

Surprise Party.

Last Saturday evening a number of the people of Bishop Creek and vicinity gave a surprise party to Mr. and Mrs. Man and their visitors, Misses Minnie and Lena Thomson, at the railroad station. The party was cordially received, and after necessary preparation all repaired to the large store room in the depot building and danced until midnight. In the mean time Mrs. Man had prepared an oyster supper for the compaey that made a very acceptable addition to the good things contained in the well filled baskets brought by the visitors. After supper the company again returned to the dance and kept it up till three o'clock, all having enjoyed the meeting heartily, thanks to the kindness and courtesy, of their pleasant hostess.

NOT MUCH FRIGHTENED.—All the work in the north end mines at Virginia City, below the level of the Sutro tunnel, has been stopped. The *Enterprise* says: "Our people do not feel much cast down by the shutting down of all below the Sutro tunnel at the north end. As they were getting nothing below, it was useless to work down there. In coming nearer to the surface and overhauling the ground hastily passed by years ago in the race for depth, something may be found that will put many men to work. When you are in the trough of the sea there is always a wave ahead, and when you are in a hollow there is always a hill ahead. Many of our people have long wished to see the Sierra Nevada and Utah folks come up out of the depths and start in upon Cedar Hill—which is a mountain of wealth. Also, it is good to see the Ophir, Mexican and Union folks taking another look at the 500 level. Great wealth may lie between that depth and the surface. Nearly all the millions of the big bonanza were dug out between the 1400 and 1600 levels.

HOG MEDICINE.—A farmer of Humbolt Meadows, Nevada, is reported to have found a specific for a troublesome disease among hogs. The Reno *Gazettee* says: "J. H. Theiss recently found his hogs suffering irom quinsy. He heard that coal oil was good, so he got a big pan full and sprinkled it liberally over their backs with his hand. The disease disappeared instantly, and he did not loose another porker. Ever since he sprinkles his drove of hogs, numbering 300, once a week, and he finds it keeps them clean and healthy.

THE WORLD'S FAIR.

[SPECIAL CORRESPONDENCE.]

NEW ORLEANS, Jan. 16, 1885.

President Arthur having signified his intention of visiting the Exposition on or about the middle of February, preparations will be made to receive him in state.

Chihuahua, Mexico, sends to the Exposition a pyramid of silver bullion weighing 5640 pounds valued at $114,000.

The financial condition of the Exposition has been a little cramped by the extensive but necessary outlay of money even since the opening. It was hoped fair weather would prevail, and if such had been the case, it was reckoned enough gate money would have been taken in to liquidate the debt. But it was otherwise. Consequently, a mass-meeting was called Thursday night to devise ways and means to secure about $300,000, which would square all accounts now due, and help pay running expenses without drawing on the gate receipts. Major Burke on behalf of the Finance Committee explained the condition of affairs, and added that the citizens of New Orleans could not and would not let the matter go by default, in a city worth its hundreds of millions. A committee was appointed whose first official act was to head the subscription list with $25,000, their individual contribution. They will report the result of their efforts to night. Even if the money should not all be raised, the Exposition, which of its self is a success beyond all cavil, will continue to attract and the people will come and attest by their presence it is all and more to than has been said.

Whenever your friends or readers come to New Orleans, if you will give them a letter to me, I will be pleased to give any information desired, and will, as your correspondent refer them to reliable locations at whatever rates they wish to pay for rooms and board, together or separate, at from $1 to $4 a day. It shall cost them nothing for these courtesies.

Personal Mention.

J. H. Shannon has been engaged to teach the school at West Bishop Creek.

Miss Lena Thomson returned home last Monday from a visit to Bishop Creek.

John Schober came in from Darwin last week and is now at his home at Bishop Creek.

Charley Levy came down from Bishop Creek last Sunday and stayed in Independence a couple of days.

Mr. N. Rhine has gone to the lower country. After spending some days in Sacramento he will go on to San Francisco.

Mr. and Mrs. J. G. Birchim of Round Valley, arriveed at Independence last Wednesday and are visiting with District Attorney Laird.

Dr. A. Marrote and James Morris, former residents of Columbus, Nevada, arrived here Thursday and left yesterday on their way to Calico. They reported Candelaria to be quite lively.

Superintendent Groves is now making a round of visits to the public schools of the county. So far as he has gone, he reports finding the schools in a much more effective condition than he had expected.

SCHOOL TEACHER.—Wanted; a position as school teacher, by one who has had ten years experience in teaching and holds all the necessary credentials required in California. Address, Inyo INDEPENDENT office, Independence, Cal.

THREE RUNAWAYS. — Last Sunday when starting from home to attend church at Lone Pine Mrs. Hamilton was severely hurt. The horses attached to the wagon ran away; she was thrown out and stunned so severely that she remained unconscious for some time. She is now much better and no serious trouble is apprehended from the accident. On the same day near Shepherd's ranch, Mr. and Mrs. Vagt were going along in a wagon when the king bolt broke, the front end of the wagon fell to the ground and Mrs. Vagt was pitched out, striking the ground with great violence. No bones were broken but the general shock was very severe and she has suffered much pain since the accident. The horses started to run but Mr. Vagt, who had also been pitched out of the wagon, held to the lines and soon had them under control. On Tuesday Frank Lawrence was delivering some freight for Harris & Rhine when the team took fright and ran away but were stopped before any serious damage was done. A few packages were scattered about and a little kerosene spilled.

A woman in Canada has been fined for persistently wheeling a baby carriage in front of a neighbor's door.

America will be glad to welcome back Minnie Palmer. The cable needs a rest.—[Indianapolis Journal

Even a base ball umpire finds that there are times when activity pays better than dignity.—[New York Journal.

Jenks, who has been ruined by his extravagant wife, says he still loves his "swamp angel."—[Boston Courier.

Southworth has written a new novel entitled "Self Raised." The title looks very much like a baking powder ad.—[Boston Post.

George Washington couldn't tell a lie. It is hard to distinguish one from the truth, especially during a Presidential campaign.

It is a fortunatething that our naval vessels do not travel on land. They might get run into by a baby carriage. —[Transcript.

A correspondent wants to know how to make hen-keeping profitable. There is but one method: Don't keep hens. —[Boston Transcript.

Our Pat says he prefers watermelon to any other kind of fruit; the green above the red ought to please an Irishman, surely.—[Boston Courier.

And now it comes to light that accordians were first manufactured before the Christian era. We always thought as much.—[Yonkers Statesman.

"A red nose," says a noted physician, "is one of the signs of insanity." It is not infrequently a sign of an insane desire for something to drink.

It is impossible to convince a woman who arrives five minutes late at a depot that the engineer did not see her coming and steam off just out of spite.

The toy pistol kills the boy that uses it. The kazoo wears out all his relatives. Both instruments have their good points.—[New Orleans Picayune.

The American people are said to spend $30,000,000 for photographs This sounds like a positive assertion, but it has its "negative" side.—[Norristown Herald.

"Another cool wave," as the young man said when his two sisters and three cousins, standing in front of an ice-cream saloon, beckoned him to come over.—[Call.

Queerly enough, the American Bar Association held its convention at Saratoga instead of Bar Harbor. But then every summer resort is a sort of a "bar" harbor—[Norristown Herald.

At Toulon a brass band has been engaged to play in the public squares, so that the people may not be low-spirited. Some who have heard the band prefer to have the cholera.—[New Orleans Picayune.

The wife of a Methodist preacher in Georgia takes turns with him at preaching. When his parishioners see the old man digging worms in the back yard they know that it is his day off.—[Burlington Free Press.

So common has the expression "painting the town red' got to be in a Western settlement, that one of the saloon-keepers has put up the sign "Artists' materials" in his window.—[Boston Commercial Bulletin.

The Italian Government thinks of prohibiting the exportation of organ grinders, because they give a false idea of the country and injure its dignity. All the world will uphold Italy in this desire to uphold its dignity.

A Pennsylvania woman has been sent to prison for horse-stealing. The dear creatures are getting their rights one after another, thanks to the efforts of the noble pioneeresses in the field of agitation.—[Boston Transcript.

An old writer says female beauty is a silent fraud. He must have been a manufacturer of cosmetics. Of all the beautiful things of earth, a handsome tombstone is about the only one we don't want more of.

A Louisville man has turned out some sort of an electrical invention by which a man can lie in bed and fish. There is no demand for such a contraption, for anybody knows that a man who will fish can lie anywhere. —[Merchant Traveler.

"Yes," said a Denver man to his wife, "in the past week I have seen two rainbows, both red."

"I can tell you the next thing that you ought to see," remarked the lady, quietly.

"What is that?"

"A doctor."—[New York Sun.

Scene: Table d'hote at fashionable hotel on Deeside; big market day. Farmer of the old school has dined. Writer—"Finished sir?" Farmer—"Fat's the chairge?" Waiter—"Five shillings, please." Farmer (startled) —"Five shillings? Weel, I'm nae deen yet." Resumes operations.

I want a girl of golden hair,
And silvery voice so sweet,
Of pearly teeth and ruby lips,
And lovely corner feet.
A girl of sparkling diamond eyes;
Good figure—if in pence—
A love who sweet as "sugar" is
And has a lot of sense.
—[Life.

Freddy—"Where would you get to if you sailed right over there?"

Sister—"Calais, I suppose."

Freddy—"That's in America, isn't it?"

Sister—"Oh, Freddy! Where is your geography?"

Fieddy—"In my box at home, thank good ness."

An Irishman, eating his first green corn, handed the cob to the waiter and asked, "Will ye plaze put some more banes upon me sthick?"

SATAN BUILDS A CASTLE.

The Legend of Rheingrafenstein—Refuge of the Right.

There are charming drives in the vicinity of Kruzenach, and authentic history enough, to say nothing of the legends, to make the valley of the Nahe as fascinating as that of the Rhine. We drove to Ebernberg, at the confluence of the Alsenz and the Nahe, wound up through its queer little village on the mountain side, and came to the old castle of Ebernburg, once the stronghold of Franz ven Sickingen, the doughty free lance and free-thinker of the Reformation. This old Herberge der Gerechtigkeit (Refuge of Right), as it was called, is now a half-ruin and a restaurant. From it is a view of singular beauty—pretty villages, bristling cliffs, a happy valley, wooded heights and ruins of the middle ages. On the one hand rise the porphpry walls of the Rothenfels, 1,000 feet of bare red wall, with little vineyards growing in ledges at its feet, and a few flowers and plants fringing its summit, where the earth has accumulated. At sunset the coloring is very beautiful, the rocks growing violet and crimson, and the hills beyond taking on a purple haze below the golden sky; and opposite, on a seemingly inaccessible height, is the ruin of Rheingrafenstein. This cradle of a powerful family stands also on a porphyry pillar 500 feet high, rising sheer from the Nahe, a steep pathway being its only means of access. It is the most audacious castle I've ever seen, and how it ever was constructed I cannot imagine. It dates back to the tenth century, some authorities claim to the eighth. The popular legend is that the devil himself built it, and I believe the popular legend. One of the old Rheingraves looked oft upon this strange, column-like pile of rock, and one day he remarked that he wished he might build a stronghold upon it, even if he had to call upon Satan to help him. Satan being conveniently near at the time, appeared, and promised to build a burg for him before the next morning, stipulating that he should have for his own the first male who looked from its window. The next morning, when the Rheingraf took possession with all his train, he saw Satan perched on a pinacle, looking forward with grim delight to his payment. But the wary old graf was quite prepared. He had dressed up a gray jackass in a monk's form, pulling the gray hood over his long ears, and thrust his head out of the window. Satan swooped down upon him and drew him forth, to drop him at his first cry of anguish, and to leave the place in a great rage; and it is said he never came back. For the poor jackass who fell 500 feet into the river, there is not a tear shed in history.

There was another personage who came to the castle Ebernberg on Franz von Sickingen's invitation, and was, in the beginning of the sixteenth century, rector of the Kreuznach Grammar School, Dr. Johann George Sabellicus Faust—Goethe's Faust. Faust lived and worked many years in the old town, his alchemy and magic the wonder of the citizens, his knowledge of the occult powers of nature their admiration, till at last his impostures brought them into such a rage that they drove him from the place.—[Margery Deane in the Boston Transcript.

Some Southern Fruits.

In Florida while the orange is king there are varieties of other fruits that are not only delightful for home consumption, but will bring good prices in market. Limes and lemons are among the number. The former are now ripe, and I find the limeade quite as refreshing as the lemonade; the lime as useful in the culinary department as the lemon. Grape-fruit, according to my fancy the best of the citrus family, matures in four or five years. There is quite a bitter taste if eaten like an orange, hence, those who do not wish to have their lips well puckered, soon learn to remove, carefully, every particle of the white skin covering the exceedingly juicy pulp, an operation easily performed. Separate the lobes, with a sharp knife cut down the center of the broad side, fold the divisions of the skin back, and then bite, and, if instructions in preparing have been implicitly followed, I think orders to bite will not have to be repeated. If the ship that brings my future Florida fortune is to come by the grape-fruit route, I hope my Northern friends will cultivate a taste for this delightful, though little-known, fruit, when I think they will agree to place it a step or two higher in their favor than the orange. It makes beautiful marmalade and wine, and is also eaten at the table with sugar, hence we prize it not only for its beauty, but for general utility. It is a very handsome specimen of the citrus family, being in color pale yellow, with very smooth skin, and twice as large as our finest orange, so in eating we find one equal almost to a good meal, and very refreshing to the inner man.—[Florida Correspondence.

Royal Manners.

Apropos of children's deportment, a story is recalled of the lately dead John Brown, the Queen of England's faithful henchman. When he first entered the service of Prince Albert the little princesses, hearing their father address him as "Brown," used the same form in speaking to him. The Queen corrected them, and they all addressed him as "Mr. Brown," excepting the Princess Louise, who, imperious even in childhood, persisted in her right to use the name as her father did. One morning the Queen heard her and informed her that if she again addressed Mr. Brown without a handle to his name, she would be sent to bed. The next morning, when he presented himself in the royal apartments, where the family assembled, the little miss said flippantly:

"Good morning, Brown!"

Then, as she saw the eyes of her queen-mother fixed upon her, she rose, and, with a curtesy, continued:

"And good night, Brown, for I am going to bed."

And she walked resolutely away to her punishment.

SALOONS.

IRWIN'S SALOON,

Cor. Edwards & Market Streets,

Independence, - Cal.

THE PUBLIC GENERALLY ARE respectfully invited to call and inspect my establishment, which has been entirely refitted and furnished in a style second to none on this side of the mountains. A SPLENDID NEW BILLIARD TABLE provided for the amusement of patrons.

Americans as Painted in American Novels.

The first and most strikiug trait in these books is the extraordinary respect for class distinction, position, "gentility," and money among the characters described, with scarcely an exception. The highest feather in a girl's cap is to have refused a "British nobleman," or, at least, one of the Boston "aristocrats." Next comes the value set upon dress. The importance of the gown question can hardly be imagined by the European mind. A French heroine is of course "bien mise," and her "chaussure" is probably insisted on; the "petites mules," or the "bas bien tires." An English girl must be picturesque in her attire, and her clothes must be becoming; but to say that her clothes came from Paris would not enhance her charms in the eyes of the readers, who would consider he rvery absurd for her pains. A wild civility

"Doth more bewitch me than where art
Is too precise in every part."

There is not much trace of Herrick, however, in the United States ideals. A list of Miss Lydia Blood's gowns, as given by so clever a man as Mr. Howells, might be drawn up for the advantage of milliners; Miss Daisy Miller's flounces and the many buttons of her gloves are among the chief points of her portrait by Mr. James.

The respect for position runs as an under-current in every story. The fine gentleman in the "Lady of the Aroostook" falls in love with a "school-marm," who is accidentally the only woman on board the packet vessel in which he is sailing, and by his own remarks and those of his friends, the reader is made to feel that an "alliance" with the girl is as impossible as one between a Schwarzenberg and a bourgeois of aristocrat Vienna. When "love is still the lord of all," and he marries her, the enormity of the sacrifice is borne in upon one's inmost soul; indeed, it is only made possible at all by the pair resolving to go and settle in California, beyond the pale of his disapproving friends.

There is a class of cheap American novelettes, written by second-class writers entirely for second-class readers, which have no parallel in England, where books are written for any one who read, and there is absolutely no class literature unless we descend as low as "penny dreadfuls" and yellow railway novels. In these little books the caste question is paramount. The fine people of the Something avenue will have nothing to do with the virtuous heroine living in the shabby street, and the moral of the tale is to show how she wins the heart of the prime hero of the "Upper Ten," and either marries or refuses him, or is taken up in some seventh heaven of position, some paradise of gentility by the son of an even higher sphere than the "avenue" society.

As for the clothes, the most harrowing incident in "A Chance Acquaintance" arises from the heroine, Miss Kitty, having put on an old traveling gown. The courage of the Boston fine gentleman who has just engaged himself to her (and who, as the author loses no opportunity to assure us, is "exactly like an Englishman") is not proof against the trial of acknowledging to some Boston "belles" that the inmate of a shabby toilette is the lady of his choice. He accordingly ignores her presence altogether, whereupon she naturally refuses to have anything to do with him. Is there any society in the world out of the United States where such a piece of snobbism could be represented as possible in a soi-distant gentleman? Noblesse oblige in that state of life if right feeling be absent, and even the vulgarest of men would hardly dare elsewhere so to slight a woman whom he was about to make his wife, and whom he must then, at least, introduce to the well-gowned fair ones. There is a pretty scene in one of Miss Bremer's Swedish novels, in which the girl puts on her oldest and shabbiest dress in order to test her lover, and he does not even find it out, his whole soul filled with the deeper thoughts of having won his lady. You feel in a higher atmosphere there than in the miliner's estimate of life, which seems to have got by mistake into such clever books as those by Mr. James and Mr. Howells.

The chains of habit are too weak to be felt until they are too strong to be broken.

ROMANCE AND TRAGEDY.

Two Unsuccessful Marriages in Search of Fortune.

Little Nellie Bailey was locked up in the jail of Wichita, Kan., last fall, under bail of $10,000, on the charge of murdering Clement Bothamley in the Indian Territory. She is of a slight figure, with a clear complexion, abundant dark brown hair, which she frequently wears over her shoulders, and lustrous brown eyes. The chivalry of Wichita thought it was a shame to imprison a pretty girl for murder, or anything else, and the first opinion which everyone expressed was that she would soon get out. After a little, when the young woman's career became better known, all talk about bail ceased, and though interest in the fair prisoner has not been lost, she has remained in the jail here continuously ever since. The Sheriff has fixed up a room for her, in which she has made herself comfortable, and friends have kept her well supplied with novels and other fiery literature.

"I didn't kill old Bothamley," she said the other day; "but if they keep me here reading these things much longer I'll murder somebody when I get out. What this country needs is a novelist. Now, I'm not very old, and I'm not very bad, but I have seen enough to write forty novels better than they get up down East. I did think once that I wanted to be an actress, and I tried the show business for a while, but now I have decided that I will turn novelist. My play was called 'The Maniac Lover.' The first novel I write will be 'The Drover's Revenge; or, The Secret of the Sunset Trail.' It won't take me long to get through with this trouble when court once takes up my case, and then I shall go to Boston and begin operations.

Nellie Bailey, who calls herself "Miss," though she has been married two or three times, is about twenty-five years of age. She has been waiting patiently for court to sit, but now that the time for her trial is near at hand she exhibits much nervousness. Her friends, who are numerous, are full of sympathy for her, and she will have many of them to keep her company during her trial. She shows the effect of her imprisonment in her pale face, but beyond that she looks about as she did when she was first incarcerated.

Miss Bailey's career has been a remarkable one for one so young, whether she murdered Bothamley or not. She was married four years ago to a banker of this State named Shannon Bailey, and with him made frequent visits to the Black Hills and other mining districts. Finding that he was not wealthy, she went East, visited friends in Rockford, Ill., and in Waukesha, Wis., and at the latter place married a man named Reise, whom she believed to be wealthy. In this she was again doomed to disappointment, but, remembering that she had made the acquaintance of an old Englishman named Bothamley while in Wichita once with Bailey, she wrote to him and asked him to meet her in St. Louis.

The two met there according to agreement, and entered into some sort of a contract. Bothamley was rich beyond question, and was on the point of moving to Texas to establish a great sheep ranch. Before leaving St. Louis she persuaded him to deed to her lands in Kansas valued at $20,000, and to make her several valuable presents of jewelry and diamonds. When these preliminaries had been settled, they came to this town in July, one year ago, and made preparations for a journey overland to their new home. They were to travel together as brother and sister, occupying the same wagon, a vehicle resembling a box car more than anything else, handsomely fitted up inside, and drawn by eight oxen. All arrangements were made without regard to expense, and it was thought that the trip would be a very enjoyable one. They took 2,200 head of sheep with them, and employed two young men to herd them. One of these boys was named Dodson. The prosecution will attempt to prove that Miss Bailey entered into the scheme deliberately for the purpose of murdering and robbing her companion.

They left here about the middle of July, and proceeded leisurely in a southwesterly direction. The boys were frequently a mile or two ahead of the wagon with the sheep, and it often happened that they would camp at places a mile apart. One night when in the territory, about seventy miles south of Caldwell, Dodson, who had been asleep, heard Miss Bailey calling at a distance, and, running to her assistance, found that Bothamley was dead in the wagon. The girl said that he had committed suicide, and a revolver lay beside his body. She appeared to be in great distress, and the other boy, who had come up by this time, suggested that it would be a good idea to go and get assistance from an emigrant wagon which they had passed a few miles up the trail. This he did, returning in a few hours with two men of the other party who were bound for Wichita. The men stayed around the wagon until morning. Then they examined the body of Bothamley closely, asked Miss Bailey many questions, advised them to turn about and go to Caldwell, and then left them. After they had gone Miss Bailey told the boys that she was not going back. She had got started for Texas, and she was going through. She told them that she was not Bothamley's sister, but his wife, and that all that he had was hers. One of the lads ventured to inquire what was to be done with the dead body of Bothamley.

"Bury it," said she quietly. "Bury it right here. Get your shovels now, quick, and dig the grave beside the trail.

The boys made an excavation as directed, and the Englishman was duly buried near a place now called the skeleton ranch. They then resumed their journey toward Texas, but had not gone far before they were overtaken by a party of deputy marshals, who had heard from the emigrants the story of the tragedy, and who believed that foul play had been committed. When overtaken by the officers Miss Bailey had possessed herself of all Bothamley's money, diamonds and jewelry, valued at $7,000

Woman Bull-Fighter.

A bull fight of a novel kind took place at Taragona on Sunday, the performers being women clothed in the male torera suit. The bulls were all young and full of fire. The first one let into the arena made straight for one of the toreras, and sent her spinning in the sand several yards off. A second torera rushed to her rescue with her capa, which she waved before the bull to draw off its attention from her discomfited colleague. The bull accepted the challenge at once and with a rapid twist of the neck caught the banderilla and sent her flying. She fell on her face and followed the previous torera in her retirement, bleeding from several scratches. The third torera then advanced, but no sooner had the bull caught sight of her than he bounded toward her and tossed her. After this the bull took a quick walk around the arena, waiting for fresh sport. No further competition entering the list, the crowd began to show signs of impatience, which grew at every moment, until they finally began breaking up the seats and throwing brickbats into the arena, yelling anathemas at the cowardice of the torera company. The stewards then announced that the money would be returned. This was done partially; but the cashier's office suddenly closed, that official having bolted with the rest of the takings.

He Corners Her Again.

"Johnny, take the broom and go out and sweep the leaves off the pavement."

"Doggone the leaves! What makes 'em fall so fast?"

"The good Lord causes them to fall each year to remind us that the end of one season of life is ever close at hand, and that we, too, must soon fall."

"Well, when they come out again in the spring what is that to remind us of?"

"That's to remind us that if we are good we, like them, will bud out new and bright in paradise."

"Yes, but them leaves don't bud out in paradise; they're jist on the same old trees on our pavement. Accordin' to that we ought to bud out agin down here where we fall off at."

"Hurry on out. Don't stand there and talk so much."

"Yes, that's a good way to get out of it."

Homely.

One of the first things that a man should do who proposes to enter the literary profession is to get a critic—a personal, private, individual critic. A good critic is as essential to the literary man as a good valet is to a viscount. They each give those final touches to the dress and appearance which are necessary in order that public approval may be won. The writer is fortunate enough to have the personal services of a good critic at his command. When he read to her an account of a rise in the suburbs of Boston, she exclaimed:—

"Why do you say 'elegant but homely houses'? Everybody knows that you have an unwarranted prejudice, but it seems to me pure spite to confess and deny the attractiveness of Boston's villas in the same breath."

"My dear critic," calmly returned the writer, "you utterly misconstrue my meaning. Unfortunately, we have let drop from our vocabularies a beautiful meaning of the word homely. There is scarcely a dearer English word than home. Why should we make its first descendent, the adjective, a reproach instead of an honor? The first and best meaning of homely is 'belonging to home.' It ought to be the only meaning. That its commonly accepted significance should be that of disagreeable plainness is only an illustration of how evil associations can degrade. The ideal house should be elegant but homely."

"I remember," said the critic's daughter, who is said by everybody to inherit her beauty from her mother, "how surprised I was during my visit last winter at Montreal to have Miss M. say to me, 'We wish you would make us a visit again, dear child. You are *so* homely."

"That is it," replied the writer "it is a delightful guest who can adapt herself to the home she is in. Why not avail ourselves of a word that means so much.—*The Christian Union.*

"What was your reason for selling Maud S?" he was asked. "You won't give it away?" "Certainly not." "Whenever I drove her on the road people would say, 'There goes Maud S.' With any other horse they say, "There goes Vanderbilt.' That is the reason."—*New York Sun.*

This is the time of the year when the young lady goes hunting for autumn leaves and finds more hay-fever, and rheumatism, and influenza, and wood-ticks than she knows what to do with.

STRANGE COINCIDENCES.

Interpertation of the Names of the Patriarchs From Adam to Noah.

In the Scriptures there are many mysterious coincidences if not direct prophecies—coincidences so remarkable, indeed, as to take them out of the catalogue of fortuitious events, and to credit them, indisputably, to prophetic prescience. A biblical scholar, of profound research, has found a remarkable connection between the signification of ten words given in the fifth chapter of Genesis, as the names of the ten successive patriarchs from Adam to Noah. In the signification of these words is found a sentence declaring Adam's fall, and the restoration of the race by the advent of the Saviour. "Adam" signifies "man," "Seth" in the Hebrew Sheth "appointed," and Eve, herself, chose this name from its having this signification, as appears in Genesis, iv. 25. "Enos," in Hebrew Enosh, interpreted "Man" especially as mortal and decaying. "Cainan," to "forge," one of the most arduous kings of labor and "toil," and toil was joined with death in the primal curse. "Mahaleel" is compounded of two words which signify the "praise of God," or the "blessed God." "Jould" means "descent." "Enoch" signifies teaching, or teacher, one who makes known or reveals. "Methselah" is "the man of offspring," the source or giver. "Lamech," derived from the Hebrew, is somewhat doubtful, is translated "brought low," but the interpretation, "smitten" is allowable. "Noah" means "rest," consolation or "comfort," as Lamech tells us, bestowing the name upon his son, saying: "This son shall 'comfort' us." The names and their signification are arranged by the writer referred to as follows:

Adam	—	to man
Seth	—	appointed
Enos	—	to mortality
Cainan	—	and toil
Mahalel	—	the blesed God
Jared	—	shall descend
Enoch	—	revealing himself
Methuselah	—	the giver
Lamech	—	to the smitten
Noah	—	of rest or consolation.

The sentence may thus be written: "To man, appointed to mortality and toil, the blessed God shall descend, revealing himself the giver, to the smitten, of rest or consolation." This remarkable and significant sentence cannot be a mere accidental collection of words, but must be in its essence and substance the veritable inspiration of prophecy, prefiguring in this truly wonderful way man's fall and misery by sin, and his final resolution to sinless happiness by the descent and incarnation of the Divine Saviour, and Son of God.

Extravagance in Speech.

Of all the extravagant habits, which bring trouble to one's neighbors, as well as one's self, is that of extravagant speaking. How many a reputation has been injured, nay, lost—how many a home blasted—how many a business credit impaired, by an extravagant mode of speech—a remark with a grain of truth as basis, embellished and colored so as to grow to such extravagant proportions, the harm is done forthwith. Extravagant professions of love, or friendship, are never to be relied on. Their very form wears out the feeling—it will not last. Extravagance in religion leads to bigotry—in politics, to demagogism. In the press, under its influence freedom becomes license, and so it goes. Let us recommend to those of our readers afflicted with the vice—in a greater or less degree who is not?—to remember what the immortal Shakespeare said to "Romeo:" "Love moderately;" and bear in mind that moderation will insure tranquility of mind and a peaceful domestic circle.

People Who Do Not Eat Bread.

The Gartenlaube has an article on those civilized nations a large portion of whose peasantry eat little or no bread. Baked loaves of bread are unknown in many parts of South Austria and Italy, and throughout the agricultural districts of Roumania. In the villages of the Obersteiermark, not very many miles from Vienna, bread is never seen; the staple food of the people being sterz, a kind of porridge made from ground beechnuts, which is taken at breakfast with fish or curdled milk, at dinner with broth or fried lard, and with milk again for supper. This sterz is also known as heiden, and takes the place of bread not only in the Steiermark, but in Carinthia and in many parts of the Tyrol. In the north of Italy the peasantry live chiefly on Polenta, a porridge made of boiled maize. The polenta, however, is not allowed to granulate like Scotch porridge or like Austrian sterz, but is boiled into a solid pudding, which is cut up and portioned out with a string. It is eaten cold as often as it is hot, and it is in every sense the Italian peasant's daily bread. The modern Roumanians are held by many scholars to be descended from a Roman Colony, in other words to be the cousins of the Italians; and, curiously enough, a variation of the polenta called mamaliga is the national dish of Roumania. The mamaliga is like the polenta in that it is made of boiled maize, but it is unlike the latter in one important respect, as the grains are not allowed to settle into a solid mass, but are kept distinct, after the fashion of oatmeal porridge.

By a powerful current of electricity Mr. Edison kept his dying wife alive for two hours.

Counting Kisses.

Perhaps of all the nations in the world the French are most given to the practice of statistics, and in carrying it out they take into consideration all manner of subjects which would never enter the minds of other people. As a case in point it is narrated of a Frenchman who recently died, that on his wedding day, some twenty years ago, he took the resolution of keeping a yearly record of the number of kisses exchanged with his wife until their union became severed by the death of one or the other. He was destined to be the first to go, but when on his sick bed, foreseeing that he would not recover, he begged a friend to let the world know the result of his twenty years of account keeping. During the first year of wedded life the kisses exchanged reached the colossal figure of 36,500, or on an average of 100 a day, but in the following twelve months there was a notable decrease, not more than 16,000 being inscribed on the register; whilst the third year shows a still greater falling off, the average number of kisses being but ten a day.

After the lapse of five years a further reduction is recorded and the account-keeper's task was simplified, for only two kisses were exchanged during each twentyf-our hours—one in the morning on rising and the other on retiring to rest. Later on, during the last ten years of his married life, they only kissed each other on leaving for or returning from a journey, and he had hence very little trouble in making up his annual statistics. Now, there was possibly very little diminution of affection, notwithstanding this ominous-looking record; it goes more to prove that the disuse arose from the growth of familiarity rather than from estrangement. Take the case of a man's children as an example; he fondles and kisses an infant much more than he does the same child as it increases in growth; but who can say that his affection is less for a daughter in the ripeness of womanhood than it was for her when lying in her cradle half or wholly unconscious of his love.

The Dress of Modern Fiction.

The cardinal objection against the lighter literature of the present day is its lack of sincerity. Form is regarded as of more importance than substance; a pretty external drapery is used to ornament a worthless manikin, and when the reader expects flesh and blood he is confronted with wood. The art which should conceal art is only art made coarse by artificiality; an inartistic niggling at pretty details; a commonplace attempt to catalogue a series of readily observed surface phenomena, and to neglect the vital soul beneath. False art has triumphed over nature; the morgue has usurped the place of the arena, and literature has sunk to the low level of busying itself with trifles; with drawing its pictures from the dressmakers' and milliners' dead models, elaborating the insignificant, apotheosizing the ridiculous, and then claiming for its stiff-jointed, artificial-voiced manikins the reward that is due to living men and women whom is so offensively caricatures.

Our Place as Beer Drinkers.

The Internal Revenue Department reports that the amount of beer which paid taxes in this country last year was 588,000,000 gallons. Adding to this the amount exported and evading the tax brings the total up to about 600,000,000 gallons. This makes the United States the third in the list of beer producing counties in the world. The number of breweries in this country does not compare with that of other countries, the breweries here doing their work on a larger scale. And, while they make two-thirds as much beer as the brewers of England, their number is one-tenth as many. England makes more beer than any other country in the world, her 27,000 breweries turning out 990,000,000 gallons yearly, while Germany with 25,000 breweries, makes 900,000,000 gallons yearly. Next comes the United States with about 3000, breweries, making about 600,000,000 gallons per annum.

Utilizing a Bicycle.

The utility of the bicycle is proved by the Vermont farmer, who takes his son's machine, suspends the wheel a few feet from the floor, removes the tire, substitutes an endless rope which he also places on the driving wheels of agricultural machines, then makes his son mount and furnish motive power for shelling corn, cutting hay turning grindstone, etc.

There is a sixteen-year-old boy said to be living at Greenville, Virginia, who is so thin that when stood between the examiner and the light the process of digestion can be seen going on in his body. It may require a good deal of faith to digest the story, but if it is true he would serve the cause of science mightily by determining once for all the question whether food ought to be well chewed or bolted. This is a question next in interest to the important one of where the food is to come from. It is a question upon which nations and communities are divided. In England the deliberate chewers are in the majority, while in America the bolters are credited with a larger vote.

According to the meteorological summary for July, compiled at the signal office, last month was exceptionally cool, being, in fact, the coolest July in eleven years. In July, 1871, the average temperature was 74 degrees; last month it was 74¼.

INDEPENDENCE, CAL.:
SATURDAY, JANUARY 31, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

A TRAIL, well equipped with relays, and used only by a semi-organized band of horse thieves, has been discovered, leading from Los Angles to Lower California

IT IS safe to say that no election was ever more entirely free from all improper influence than that of Leland Stanford to the Senate. The election of Mr. Stanford was wholly due to the fullest confidence in his ability, disinterestedness and integrity.

IN the Nevada Assembly a bill has been passed, fixing the price of license for the sale of liquor at $300 a year payable in advance. Two members of the Assembly, Hanks and Archer, both saloon keepers, voted for the bill.

Judge Orville, C. McDonald, a well known lawyer of Nevada, is dead. He died at Bodie last week. The *Free Press* says: "Of late years he has been broken down in health and his one great fault, his one enemy, hastened his demise.

A BILL has been introduced into the Legislature by Loud, of San Francisco—To amend Section 2 of Article IV of the Constitution, by striking out sixty days, the present limitation of the sessions of the Legislature, and inserting 100 days as the limit of the time to which members may draw their salaries.

IN the discussion in the United States Senate on the bill to restore General Grant to his old rank, none spoke more warmly in favor of the measure than some Senators from the South. The people of the South have not forgotten the generosity of General Grant at Appomattox. A brave people are seldom ungrateful.

THURSDAY of last week Mrs. MacDonnel was drowned in the reservoir of the town waterworks at Reno. In company with her husband, who is a telegraph operator, and Miss Etta Smith, Mrs. MacDonnel was skating on the reservoir the ice broke, the whole party went under. Mr. MacDonnel, it is said did the very best thing possible, under the circumstances, and that if he had done differently all would have been drowned.

THE great qualities of Leland Stanford, that so emminently fit him for the Senate, have been admitted and heartly commended by the press of the State. But another fact deserves mention, of which every Californian may be proud, namely, the proof this election, and the general approval there of, gives of the high intelligence of the people of the State. For years the most unstinted abuse was heaped upon Mr. Stanford, and bitter prejudice was entertained against him. The best cultivated minds find no harder task than to rise superior to prejudice, and for a whole people to display such a mental triumph is one of the rarest events in history. When all the circumstances of this election are considered, it may well be doubted whether a similar event, so creditable to Mr. Stanford and his constituents, could occur in any other State. The high intelligence of the people, proven by the election of Mr. Stanford, is the best guarrantee for the future peace, prosperity and glory of the State.

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum or phosphate powders. SOLD ONLY IN CANS. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

Delinquent Tax List For 1884, INYO COUNTY, CALIFORNIA.

Ah Coon—Lot No 4 in block No 6 in the town of Hawley, personal property, 1 poll tax 1 hospital tax ..... $ 12 27
Argus Range Silver Mining Company—The Argus Range mill and mill site, five acres; five miles of water pipe and five acres of land containing springs; also boarding house and stable; 1500 feet in the Benanza King mine; 1500 feet in the North star mine; 1500 feet in the Natoma mine; personal property 379 43
Abachuco, Yguacio, and Francisco Paradies—The south east qr of section 14, township 15 south, range 36 east, 160 acres; lot No 1 in block No 16 in the town of Lone Pine with improvements; personal property, a poll tax, 1 hospital tax 40 41
Alabama Silver Mining Company—Lot No 53, township 21 south, range 45 east, 16 84-100 acres, in Panamint Mining District 3 91
Arnold, Robert—The north hf of south west qr, south hf of south west qr, section 22, township 11 south, range 34 east, 160 acres; north hf of north west qr, north hf of south east qr, section 27, township 11 south, range 34 east, 160 acres; west hf of north west qr, and west hf of south west qr, section 23 township 16 south, range 36 east, 160 acres; personal property, 1 poll tax, 1 hospital tax 49 56
Baptist Church, Trustees of—House and lot in Bishop Creek on Main street, lot being 75x100 feet, and known as the Baptist church property 27 80
Burt & Engle—House and lot 50x100 feet in town of Big Pine and north of McDonald & Gregg's store, known as Burt & Engle's saloon; personal property 31 35
Burt, H. H—House, and lot 50x100 feet on the east side of the main county road in the town of Big Pine known as H. H. Burt's residence; personal property 17 28
Bogart, J—Personal property, 1 poll tax, 1 hospital tax 8 52
Brockman, M. C.—Personal property, 1 poll tax, 1 hospital tax 13 40
Bastian, Thomas—House and lot in the town of Darwin on east side of Market street, lot being 25x100 feet and premises known as Thomas Bastian's residence; personal property, 1 poll tax, 1 hospital tax 10 57
Brown, Mrs Annie—House and lots in the town of Independence, being lots 1 and 3 in block 23; personal property 15 50
Blazer, G. W.—House and two lots in the town of Bishop Creek, on north side of Line street and opposite John Clarke's residence 12 44
Baker, J. Van & Company—House and arastra in Beveridge District known as Barnes', Keyes' and Van Baker's arastra; personal property 3 22
Bagole, C. D—The east hf of south west qr, west hf of south east qr, section 21 township 15 south, range 36 east 160 acres; house and lots in town of Lone Pine, fractional lots 1, 4 and 5 in block 5, fractional lot 6 and lots 2 and 3 in block 15, lots 1 and 4 in block 19, lots 5 and 8 in block 3; outside land, 100 acres; personal property 94 79
Cerro Gordo Freighting Company—Cartage landing house, buildings and stable in township 19 south, range 36 east, 6 acres; Nine Mile Cañon station and water pipes; Rose Spring station and water pipes; 1500 feet in the Minnietta Bell mine, millsite, improvements and tailings; lot No 1 of north east qr and north east qr of south east qr section 1, township 19 south, range 36 east; north hf of lot No 2 of north west qr, section 6 township 19 south, range 36 east, 154 acres 145 01
Clark, F. T—Possessory claim situated about six miles east of the town of Big Pine and in the Inyo range of mountains, known as Bedford's claim, 20 acres; personal property, 1 poll tax, 1 hospital tax 14 21
Conners, James—House and lot in the town of Darwin situated south west of P. Redey's two story building, and known as J. Conner's residence; personal property, 1 poll tax, 1 hospital tax 10 40
Cromwell, Oliver—The north east qr of sect on 35, township 6 south, range 33 east, 160 acres; personal property, 1 dog tax 41 89
Canadas, M. J—The south hf of southeast qr, section 7, township 15 south, range 35 east, 80 acres; personal property, 1 poll tax, 1 hospital tax 20 97
Clark, Alexander—The north east qr of section 21, township 13 south, range 35 east, 160 acres 7 33
Comstock Silver Mining Company—Lot No 40 in township 21 south, range 45 east, 20 60-100 acres 3 92
Challenge Silver Mining Company—750 feet in the Challenge mine, situated in Panamint Mining District; Challenge Silver Mining Company's mill site, situated in said district; lot No 44 in township 21 south, range 45 east, 1 93-100 acres 5 27
Davis, John—House and lot in town of Darwin on west side of Main street joining Eddy's store on the south; personal property, 1 poll tax, 1 hospital tax 15 17
Dormer, Mrs. John—House and lot in town of Bishop Creek situated on the south side of Line street opposite Manzinger's brewery and known as Mrs. Horrel's residence, said lot being 100x100 feet; personal property 20 98
Drake, Mrs. G. L—House and lot in town of Bishop Creek situated on south side of Line street and known as Drake's Hotel, said lot being 60x100 feet; personal property, 1 dog tax 56 95
Frank & Stricker—Personal property, 2 poll taxes, 2 hospital taxes 20 99
Diaz, Joseph (Indian)—The south west qr of south east qr, south east qr of south west qr, section 4, township 7 south, range 32 east, 80 acres; personal property, 1 poll tax, 1 hospital tax 14 83
Eagle Borax Company—16 borax claims of 20 acres each, said claims or locations being situated on the west side of Death Valley and near what is commonly known as Big Hole Spring, 320 acres 67 54
Fitzgerald, Frank—5 acres of land situated in the Darwin Wash and known as the Darwin Wash garden; personal property 30 18
Frazer, Stewart—House and lot 50x100 feet at Bishop Creek Depot, lot 6 in block E; personal property, 1 poll tax, 1 hospital tax 18 07
Fulton, Thomas—Personal property, 1 poll tax, 1 hospital tax 15 53
Fabrikenig, H—Fractional north east qr and fractional north west qr, section 4, township 19 south, range 37 east, 117½ acres 11 00
Fried and Anderson—Lots No 3, 6 and 7 in block No 21, in the town of Lone Pine 3 06
Gill, Thomas—The south west qr, section 2, township 5 south, range 35 east, 160 acres 10 74

Public Notice

Is hereby given that unless the above taxes and costs are paid I will on

Monday the 23rd Day of February, 1885,

Between the hours of 9 o'clock A. M. and 4 o'clock P. M., to wit, at the hour of 10 o'clock A. M., commence to sell the above described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day according to adjournments until the whole real property above described, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 26th day of January, A. D. 1885.

JOHN S. MCGEE,
Sheriff and Ex-Officio Tax-Collector, Inyo County, California.
By J. J. MOORE, Deputy.

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARKE, AN INSOLVENT DEBTOR.

JOHN CLARKE HAVING FILED IN THIS Court his petition schedule, and inventory in insolvency, by which it appears that he is an Insolvent debtor, the said John Clarke is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clarke, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation or association for his use. The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered. It is further ordered that all creditors of said debtor be and appear before the Hon. John A. Hannah, Judge of the Superior Court, of the county of Inyo, in open Court at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed

JOHN A HANNAH,
[SEAL] Superior Judge
Attest, THOMAS CROUGH, Clerk
Dated, January 2, 1885.

STATE OF CALIFORNIA, } ss
County of Inyo. }

I, THOMAS CROUGH, County Clerk of the county of Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing order of Adjudication is true and correct as the same remains in this office.

IN WITNESS WHEREOF I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo this 21 day of January 1885

THOMAS CROUGH, Clerk,
By ALEXANDER CLARK, Deputy Clerk.

ORDER TO SHOW CAUSE ON APPLICATION OF GUARDIAN FOR ORDER OF SALE OF REAL ESTATE.

IN THE MATTER OF THE ESTATE AND Guardianship of Jeannette Lewis.

It appearing to this Court from the petition this day presented and filed by W. R. Tibbetts, the guardian of the person and estate of Jeannette Lewis, a minor, praying for an order of sale of certain real estate belonging to his said ward, that it is for the best interest of said ward and necessary that said real estate should be sold.

It is hereby ordered that the next of kin of said ward and all persons interested in said estate, appear before this Court on Wednesday, the Fourth day of February, A D 1885, at ten o'clock a m, at the court room of this Court, at the town of Independence in the county of Inyo, then and there to show cause why an order saould not be granted for the sale of such estate.

And it is further ordered, that a copy of this order be published at least three successive weeks before the said day of hearing, in the Inyo Independent, a newspaper printed and published in said County of Inyo.

Dated December 14, 1884.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 31,.....1885

—Tom thinks his little Webb is the nicest piece of goods he has ever handled.

—The Sheriff contributes a lengthy article this week: every sentence is pointed, and the whole has a great deal of interest in it.

—It is prodosed to levy a special tax within the limits of Bishop Station district for building a new school house. See the notice published on another column.

A MISTAKE.—We were in error in stating last week that Mr. J. H. Shannon has been engaged to teach the West Bishop school, as Mr. H. H. Howell is at present in charge there.

—Communications intended for publication must be signed by the writer, or they will not be published This is not intended to apply to well known correspondents, who write over a familiar signature.

A SEVERE LOSS.—On last Sunday, a hayrack on B. H. Reyman's ranch in Mason Valley caught on fire, and in an hour 600 tons of hay, 80 tons of grain, and farming utensils were burned, Loss $10,000; partially insured.

NEW CEMETRY.—The Odd Fellows of Independence have established a new cemetry. It is located just south of town and east of Main street. A good fence was completed this week: the grounds will be improved and tastefully arranged as quickly as possible.

FAILURE OF JUSTICE.—There has been another failure of justice in Mono county. The Bridgeport *Union* says; Charles Jardine, tried for assault to murder Deputy Sheriff Kirk Steves at Lundy last Fall, was acquitted by a jury of his peers on Tuesday—and thus ended another tempest in a tea pot at a good round cost to the people of the county.

WASHINGTON'S BIRTHDAY.—The Bishop Creekers propose to celebrate Washington's Birthday in becoming style. The 22nd falling on Sunday, on Friday will be held the sports consisting of baseball match and a ball at night. A challenge was some time since issded by the Big Pine nine to the Bishop Creek club to play a match game; this has been accepted, and as both sides are confident of their own ability to win a good game is expected.

FIRE AT ELNA.—About ten minutes to one o'clock last Wednesday morning fire was discovered in the buildings at the Elna furnace. Since the first week of last November the property has been in possession of the Sheriff, and the keeper, Sam McMurry, was the first to discover the fire. McMurry was sleeping in the boarding house, about two hundred yards distant from the furnace; between the house and the furnace there is a little ridge in the ground that shuts from sight the lower part o the furnace and surrounding buildings. The fire evidently started near the ground, and had made a good deal of headway before being discovered. When McMurray gave an alarm a number of men who were in the boarding house hastened out, and by their efforts did much to limit the damage. The water jacket and other parts of the furnace itself remain almost uninjured. The refining works have sustained but little damage. The greatest loss is by damage to machinery and loss of material, such as tools, large scales, and so forth. The steam engine is badly injured, but the boiler is not supposed to be any the worse. A large pile of coal was burned up. The total damage is estimated all the way from six to eight thousand dollars. There appears to be some doubt about the property being insured; Mr. Minear says a policy was written out some time ago, but he does not think any payment has been made upon it and therefore no insurance could be recovered. The origin of the fire has not yet been explained; it is about eleven weeks since any work was done at the furnace, or any occasion for the use of any fire in or near any of the buildings around the furnace. A sale of personal property at the furnace under execution by the Sheriff, had been appointed for Wednesday; the sale came off, but the fire left little to sell. Hoit & Company of San Francisco hold a mortgage for $10,000 against the property. There are also labor liens and other claims against it.

Personal Mention.

Mr. J. Smith was down from Big Pine last Tuesday.

Captain Keeler came up from Keeler Thursday, he stayed but one day in town.

Barney Peeler was down from Bishop Creek last Saturday, showing his handsome horse around.

Mr. and Mrs. William Horton of Round Valley passed through Independence last Saturday on their way to Los Angeles.

Our townsman G. W. Brady, started last Tuesday morning for New Orleans; he goes to take in the big show, and is likely to be gone some months.

W. H. Bulpit and Wils Yandell passed through Independence last Thursday with a band of horses for Los Anegles market. Mr. Bulpit will go to San Francisco before returning home.

Mr. Day of San Francisco has been looking at several mining properties in the lower end of the county, during the past week. It is understood that Day is acting in the interest of parties in San Francisco, who may become interested in the mines.

PHOTOGRAPHING THE MOUNTAINS.

EDITOR INDEPENDENT.

On Saturday, 10th inst. in company with Mr. Hanson, photoghapher, I left the "Lake View House" at Keeler, bound for the summit of Cerro Gordo peak, in the grand old "Inyo." The sky did not look very propitious on the start, and held its cloudy character during the entire day, especially over the Sierras, the snow crowned heads only now and then being visible above the clouds. We arrived at the town of Cerro Gordo at 2 P. M. but the indications of storm induced us to wait for better weather before attempting to climb the mountain. Before reaching the town we encountered heavy snow drifts, through which we had difficulty in forcing our horses, this being the first attempt to take animals over the road since the heavy snow storms of last December. The horses were very tired when we got through, and appeared glad to get hidden away in the warm underground stables of Uncle Johny Brisco. Before entering the town we stopped long enough for Mr. Hanson to get his apparatus in position and take a view of the noted Ignacio mine. The picture includes the "Potosi House," in front of which our genial friend Pat Clinton is seen hitched to a Limerick Baruche (wheelbarrow). By way of getting even with Pat we supped lodged and breakfasted with him, and my worst wish for him is that he may be fortunate as speedily to get a wife who will make food taste as good and everything as agreeable and pleasent for him as he did for us. Toward evening we were able to take two fine views, one of the town, and another of Owens Lake in the distance. The latter especially will make a splindid picture. Near evening the view from the "Potosi House" presented a magnificent spectacle of lake and Sierras with peculiar cloud forms hanging over. The light was rather faint, but unwilling that such a scene should be lost we placed the instruments, and succeeded in catching a negative that will give a full picture of indescribable charms. Next morning, (Sunday) broke upon us clear and nearly cloudless, and being of opinion that nothing could be more elevating to the soul, nor more inspiring of adoration of the Great Creator than the sublimities of nature, we did not hesitate to begin the ascent of mount Cerro Gordo. A few friends willingly accepted an invitation to join us, and soon after an early breakfast we assembled at the new hoisting works of the Union mine. The comany consisted of Mr. Morrison, from Belshaw & Co's store Messrs. Pfhol, Weiss Thomas, Albert Clinton, your humble servant, and the photographer. Each one of the company carried some part of the photographic apparatus, blankets or other necessary article. The trail is very steep, and was covered with hard snow climbing was no childs play. Flying clouds warned us what to expect in the way of wind on top of the mountains. When about two thirds of the way up a fierce and cutting blast swept the north side of the mountain, on which we were; the stoutest and hardiest men in the company were almost forced to succumb but all finally pressed onward and upward. I was left behind, and soon all the others were out of sight. For some time it took all my failing strength to face the gale and stand, but it had to be done, and at last I succeeded in reaching the summit of the montain where the rest of the company were already assembled. All felt amply rewarded for the toil of the ascent. A sheltered nook was found and here the artist placed his aparatus, the "dark room" being heavily weighted down with stones.

For a time all thought of getting pictures was forgotten in contemplation of the sublime features of the landscape. Looking toward Darwin the view includes the Argus range of mountains; Lookout mountain and others of the higher summits showing prominently. East ward from these the Telescope range was seen, and also a strip of Panamint valley. Some fine pictures of these scenes were obtained. Turning to the north, and thence to the eastward, an awful descent was seen plunging downward almost from the very spot where we were standing; from its base an immense stretch of plain sweeps away to the distant ranges of montains, that rise chain after chain toward Salt Lake, five hundred miles away. Looking across that wonderful Humbolt basin no language can describe the scene that is presented. Whole ranges of extinct volcanoes; deep valleys, wrinkles furrowed by Time in the face of mother earth, that go far below the level of the sea; and where the blue waves of ocean rolled ages ago, now not a trace of moisture remains, but the white sand glistens in appaling desolation. Billows of white clouds rolled far as vision extended, and through this snowy sea into the clear atmosphere above, came the tops of the remarkable Buttes which so distinguish this vast region from any other upon earth, a region having its own system of rivers whose waters are all lost to sight within its own mysterious limits. In two seconds a picture was taken of a region that could not be described in minute detail in two years. One of the views taken includes a portion of Death valley, where it joins up to Saline valley; of the latter we attained a magnificent view looking off toward Gold mountain in the far distance. Just as the cap was about to be taken from the lens for this picture, the clouds rolled in between two mountain peaks making a golden gate from the ocean of clouds beyond into the valley of Saline. Sighting northerly, along the line of the Inyos, we secured a view that has some remarkable features.

It was now time to start on the descent of the mountain and preparation was quickly completed for doing so. Though chilled through and half frozen we could not help but pause on the fearful chasmal divide between the north and south summits of the mountain. Here we looked down a sheer precipice of awful depth to the eastern base of the mountain. We found a sheltered spot where we made a large fire of sage brush and got warmed, so we could the better cling to the rugged walls of the chasm down which we had to pass. Our artist placed his camera, and took a picture of the party and their wild surroundings. Making a fresh start we continued our descent, struggling with difficulty against the fierce blast that swept up toward the divide between ihe Cerro Gordo and Buenavista mountains. No one dared to expose face or eyes to the fury of the wind, we just groped our way along. For my own part, I did not know that I was near the foot of the trail till almost there. I should have noted that before we began the descent of the mountain, we caught one remarkable view of the Sierras, though they were obscured by storms almost all the day. Two high peaks "Sheeps Rock" and "Williamson" I think, showed themselves with a whirling storm between. The view was taken when the storm raged its fiercest, and will, I am sure, make an exciting picture. One fact we observed that may be of some scientific value; in observing the horizon or plane of the camera, as it lay along the summit of the Sierra, it showed beyond all doubt the comparative hight of the principal peaks. Mount Whitney's dome was lifted clear and well defined above all the others. In fine, it was a day long to be remembered and my mind is set on having the result of the trip known and appreciated elsewhere. This I can the better accomplish by the aid of many fine pictures I have now secured of the Sierras and other mountain ranges, such views as are unsurpassed for sublimity and grandeur in any other land but our own. J. M. KEELER.

FARMING IN MONTANA.

A former resident of Inyo county writing to a relative in Independece under date of January 15th says:

I am going to the post office tomorrow for the first time since New Years. We are having a very hard winter, the worst I have seen in the territory; storms set in on the 14th Desember, snow fell to the depth of twenty six inches, and the themometer went down to thirty degrees below zero. Last week a thaw took off some of the snow. but now we have about eight inches of ice and snow together, and the weather is very cold, and likely to keep so.

For some days past I have been at work sinking a well, and just struck water today at a depth of forty five feet. At depth of forty one feet I found considerable of a curiosity, this was the sediment of an old river bed, containing pieces of wood, eight to twelve inches long, and about fout inches thick. After going through this sediment I struck water, and here I found what appears to be a good sized log, but this I have not yet got out, therefore do not know what its dimensions may be.

You ask, in your letter, that I give the price of produce here. Now the fact is we have scarcely any cash market atall at present, and times are about as tough for money as one can well imagine. When there is any inquiry for wheat or oats, either can be bought at half a cent a pound; potatoes from a quarter to a third of a cent, onions a cent and a half; beans three cents. Hay brings a better price, last Fall it brought from four to six dollars a ton, and now it is likely to raise a little.

The price of land depends upon improvements and locations. There are farms in this valley that ten thousand dollars would not buy; then there are other good places with government title but very little improvements, that can be bought from five hundred dollars upward. There is yet some land open for locations, but to get water onto it would cost from two to five hundred dollars per acre. My place had no water upon it, that is why it was left so long unclaimed. Three other settlers located land adjoining mine, and we all four went to work on a ditch; we have it now nearly completed, and it will give us as good water rights as any in the county. The ditch will cost each of us about one hundred and fifty dollars in labor.

I dont think there will ever be any thing in raising grain in this valley for market; but farmers can raise it for their own home use and do well with it. Hogs live well through the summer on the range, and in the Fall can quickly be fatted on grain. I have not yet seen bacon sell for less than fifteen cents a pound, and at that figure it pays to feed grain. Beef and mutton are always in good demand, and it pays to feed grain to cattle and sheep. Stock cattle are worth fifty dollars per head. Horses, scrubs, can be bought at ten to fifteen dollars, but good horses common fair prices. These brief notes will give you a fair idea of values and affairs in Montana.

FATAL SHOOTING.—On Wednesday evening of last week a young man named William Ryan was shot and killed in Sonora. The *Toulumne Independent* says: "On the evening of the shooting Wm. Ryan was tending bar for his brother John, at Turn Verein saloon, while he was attending the Odd Fellows lodge. Several young men came in and wanted to go into the hall to box with gloves. Being late and the fellows somewhat boistorous, Ryan refused. This was resented. S. Wetmore and E. T. Richards being present, the former was ejected, and soon after all left When John Ryan returned from the lodge, Wm. related what had happened and soon after started home. Just after he left, John followed, fearing that his brother might have further trouble with them.

Wm. passed down street to Crichton's store, and crossed to J. White's corner, where Richards accosted him. They had words together, and a scuffle ensued up the sidewalk to Rowell's gunshop, when shooting commenced. The night was very dark, and it has not appeared who fired the first shot, of which there were five—some say, six. Ryan staggered from the gutter to the middle of the street, when Wetmore shot, standing within three or four feet of him, the powder burning his face. Ryan fell backward to the ground with a death wound. Hearing the scuffle as he was going down street, Johnny Ryan crossed over, from Openheimer's corner, and reached the spot after the firing began, and received a shot in the neck. The first three shots were close together, then a pause, and then the others.

Policeman Graham arrived at the spot a moment after the shooting and arrested Wetmore, who was inquiring for the Sheriff, saying he had killed the the two Ryan boys. Constable Moody arrested Richards. Both were taken to jail.

FOUND NO POISON.—Dr. Samuel Cox, D. D., Practical Analytical Chemist, Washington, D. C., who made thorough and careful analyses, reports that there is neither morphia, opiam, emetics nor poisons in the Red Star Cough Cure; that it must prove a boon to those whose systems shrink from the use of such compounds, and especially to mothers, who justly dread the evil, and at times, fatal effects of these dangerous drugs. He further states it is not only free from all opiates, poisons and emetics (a thing which not one cough preparation in ten can boast) but it is altogether an original and most happy combination of the best remedial agent, and is as harmless as it is effective.

BORN.

WILLIAM—At Bishop Creek, January 24, 1885, to Mr. and Mrs. Jasper William, a son.

WEBB—At Independence, January 25, 1885, to Mr. and Mrs. T. Webb, a daughter.

DIED

BAKER—At Big Pine, Saturday, January 24th 1885, William A. Baker, aged 56 years, 4 months and 8 days.

—William A. Baker was born in Hanover county, Virginia. He came to California, in 1849 and for some time after his arrival mined on the Yuba River. From there he went to Stockton and from that place to Angels Camp, Calaveras county, where he was again engaged in mining. In Company with his brother-in-law, Mr. A. N. Bell, now of Independence, Mr. Baker came to Inyo in the Spring of '63, and went into mining at San Carlos, where he continued for the next few years. He next made a location of land at Big Pine, and in 1872 was married to Miss Fanny White. From the time of his marriage till his death Mr. Baker lived upon his farm, which he continued to improve till it is one of the finest places in the county. Mrs. Baker is left with three children, two boys and a girl. A large concourse of people from all over the county atterded the funeral, to pay the last tribute of respect to him, whose honorable character won the respect and confidence of all who knew him.

NOTICE.

NOTICE IS HEREBY GIVEN TO ALL VOters in Bishop Station school District to be present at the house of Barton McGee in said district on the 17th day of February, 1885, for the purpose of voting on the question of levying a tax of $500 for the purpose of building a school house.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 31,.....1885

All Sorts.

The heated term—Go to blazers.

'Tis the last roast of summer.

A trade scenter—The drummer.

The death rate—an undertaker's bill.

A tie game—popping the question.

A waist of time—an old maid's.

A Chinese want—Celestial music.

The heated spell—h-e-a-t-e-d.

"Called back"—The man that forgot to pay his check.

False hair does not antedate false pride.

Spitting on the hands dosen't dig the potatoes.

The question of the hour—What time o'day is it?

Maid of hall work—the hotel corridor sweeper.

A supposititious case—The prima donna's jewel casket.

A screaming farce—The performance of an amateur opera singer.

Should a mustard plaster be classed among drawing materials?

A justice's pantaloons can hardly be called breachers of the peace.

The emigration of bank cashiers to Canada looks like an ex-owed us.

The Czar of Russia may be Warsaw off than if he had staid at home.

It is the successful trapeze performance who generally reaches the climb-acts.

The last rows of summer—Those taken on the lake just before leaving for town.

The cream of a joke would be lost upon a milkman—he wouldn't know what it was.

"How will you have your hair cut?" may not be slang, but it certainly barberism.

The man who discovers the North Pole can knock plenty of persimmons with it.

Speaking of matrimonial yokes, a New York woman has just run away with Mr. Egge.

Sleep, "nature's sweet restorer," is the best grindstone we know of to brighten one's ideas.

The girl with bangs generally makes a noise in the world—at least it annoys a good many to look upon her.

Life is short—only four letters in it. Three-quarters of it is a "lie" and a half of it is an "if." Put this on "file" if you would as "lief."

"Truth lies at the bottom of a well," but in this enlightened century men are able to carry on the same business very successfully on top of the ground.

Kate Field's new lecture is entitled "The Mormon Monster." It is inferred that the Mormons in question refused to give his plural wife money for a new fall bonnet.

The Detroit Free Press chronicles the fact that out of fifty odd medical papers started since 1883, seventeen have died. The same cause has produced like results among the mortals, viz.—poor circulation.

Mr. Winks—"Jane, have you fed the dog this morning?"

Mrs. Winks—"No; he doesn't need anything."

"Why, I have not given him any meat since yesterday morning; have you?"

"No, but one of Mariar's fellers called last night."

"George, dear," said a sweet young wife so her husband, "I've had a talk with the servants this morning and have agreed to raise their wages. They said everything was so dear now—rent was so high and the price of meat and butter had risen to such a price, and everything—I thought this was reasonable, because I've so often heard you complain of the same thing."

"There is this difference between us," said the needy tramp, looking the editor full in the eye; "you fill a long-felt want and I want a long-felt fill." The editor wept, and, with many a muffled blow, hewed off a fragment of a wedding-cake that had been sent in with the notice, and handed it to the wanderer. "Fill up on that," he said, "and you will feel it long after all trivial fond records have been wiped away from the subtraction table of your memory."

Just as the Fulton ferryboat was leaving the Brooklyn slip (says the Sun) a young woman, clinging to the arms of her companion, leaned backward till she could see the top of the bridge tower, and remarked: "Oh, how high!" "I have been more than three times as high as that, said the man. "I know you have." "It was when they had the captive balloon down at Coney Island." "Oh," said the young woman thoughtfully, "I thought it was that night you came home from the picnic.

A young woman who thought she was losing her husband's affection went to a seventh daughter of a seventh daughter for a love-powder. The mysterious woman told her: "Get a raw piece of beef, cut flat, about an inch thick. Slice an onion in two, and rub the meat on both sides with it. Put on pepper and salt, and toast it on each side over a red hot coal fire. Drop on it three lumps of butter and two sprigs of parsley, and get him to eat it." The young wife did so, and the husband loved her ever after.

"Hello, old man! I'm glad to see you out again. The last time I heard from you you were pretty sick."

"Yes; I haven't been out before for over a year."

"What doctor did you have?"

"Half a dozen. The last one was a preacher. He used the faith cure, and brought me out all right."

"Faith cure? Why, you used to be a regular infidel. Did you have any faith in it?"

"No, but the preacher had."

ALLIGATOR HUNTING.

A "Look-'em-up," A "Kill-'em-sure" and "Dynamite."

A few nights ago I had my slumbers broken several times by the discharge of guns. On repairing to the bank of the river, the next morning, to ascertain the cause of the noises I found two young men occupying a hastily constructed palmetto fan camp. Six dead alligators were lying around the camp, varying in length from four to eight feet. The hunters had killed them the previous night. One of the young men was busy skinning the alligators, while the other, with the aid of a single cooking utensil, which answered the purpose of a baking oven and coffee pot, was preparing a frugal morning meal. The skin is removed from the belly the under part of the jaws, and the inside of the legs. The skin on the back is worthless. As soon as the skins are removed they are salted and packed in barrels, and shipped to a New York firm. The hunters receive $1 a piece for all hides four feet long and upward.

After the skins are removed the hunters cut off the heads and place them on the edge of the river, where they remain for about a week. At the end of that time the teeth become so loose that they can be readily pulled out with the fingers. The teeth from half a dozen alligators weigh about a pound, and are worth $4.

The two young men killed fifty alligators in the week that they hunted in this neighborhood. They began hunting as soon as it became thoroughly dark. Their hunting outfit consists of a bull's-eye lantern, in camp language called "look-'em-up," a double-barreled shotgun, or "kill-'em-sure," and a hatchet, with which they split the alligator's skull, and to which they have given the very expressive name of "dynamite." The man who is to do the shooting for the night fastens the lantern to his forehead and takes his place in the bow of a small boat. His partner paddles the boat cautiously along the stream, while the man in the bow keeps a sharp lookout for alligators' eyes, which under favorable circumstances he can "shine" with his lantern at a distance of 200 yards. As soon as they discover a pair of eyes they paddle cautiously up to within a couple of feet of the alligator's head and discharge a load of buckshot into it. As soon as the shot is fired the paddler catches the alligator by the jaws, which he holds together with one hand, while he cleaves the skull open with his hatchet.

Sometimes the alligators retain considerable power of action. When such is the case it is rather exciting work getting them into the boat. Sometimes very large alligators turn the boat over. If an alligator is not handled at once after being wounded he sinks to the bottom and is lost.

Gems of Thought.

If the spring put forth no blossoms, in summer there will be no beauty and in autumn no fruit; so if youth be trifled away without improvement riper years will be contemptible and old age miserable.

Beware how you let words pass for more than they are worth, and bear in mind what alteration is sometimes produced in their current value by the course of time.

Wealth legitimately acquired is valuable, and it is only valuable when thus acquired.

Love thy wife and cherish her as long as thou livest. Flattery is better than roughness, and will make her contented and dilligent.

True dignity is never gained by place
And never lost when honors are withdrawn

Be not ashamed of thy virtues. Honor is a good brooch to wear in a man's hat at all times.

When we find we are not liked we assert that we are not understood, when probably the dislike we have excited proceeds from our being too fully understood.

A man's time, when well husbanded, is like a cultivated field, of which a few acres produces more of what is useful to life, than extensive provinces, even of the richest soil, when overrun with weeds and brambles.

It is a task indeed to learn to hear,
In that the conversation lies;
That shows or makes you both polite and wise.

We may read, and read, and read again, and still find something new, something to please, and something to instruct.

The careful reader of a good newspaper can learn more in a year than most scholars do in their great libraries.

A sordid love of money is certainly a very senseless thing, for the mind much occupied with it is blind to everything else.

It is only through the morning gate of the beautiful that you can penetrate into the realm of knowledge; that which we feel here as beauty, we shall one day know as truth.

If there be a crime
Of deeper dye than all the guilty train
Of human vices, 'tis ingratitude.

The Knife Grinder and His Work.

The knife-grinder has, after all, a story to tell, and a very dismal one it is. He is environed by dangers, as he is saturated with the wet "swarff" (powdered stone) which dies him a deep saffron color from head to toe. He sits over a tool which at any moment may send him through the roof with all the suddenness and velocity of dynamite and he works in an attitude and (especially if he be a "dry" grinder) inhales a dust which he knows will shorten his life by ten, twenty, or even thirty years as constitution and fortune may serve him. The sharp crack of a breaking stone is an appalling sound to the occupants of a grinding-hull. A bang in a trough, a crash in the roof, and a piteous moan, and all is over. If the victim be alive he is hurried to the hospital; if dead, his crushed body is reverently carried away. No vigilance in the master, no care in the workman, seems able to avert these periodical catastrophies. The insidious water-rot, the hidden flaw, and the unequal grain do their fatal work in spite of all precautions.

SALOONS.

IRWIN'S SALOON,

Cor. Edwards & Market Streets,

Independence, - Cal.

LITTLE ROMANCE.

Stories Covering the Curious in Circumstances and Incident.

AFTER TWENTY-SIX YEARS.

Twenty-six years ago Samual C. Simpson, who was then employed in Dubois' jewelry factory, was cutting a piece of gold from a breastpin, when the piece suddenly flew upward, cutting a deep slit in his eye. Although the accident was not painful the sight of the injured organ was distroyed. The piece of gold was one sixty-fourth of an inch think and of an oval shape, its greatest diameter being about a quarter of an inch. It could not be found at the time of the accident, and was supposed to have been lost. Three weeks ago Mr. Simpson's eye began to give him intense pain and became greatly swollen. For relief he applied to it a bread poultice, which was frequently renewed. When he removed the poultice yesterday he was astonished to find clinging to if the piece of gold which had cut his eye more than a quarter of a century ago. No one had supposed that the missing gold embedded itself in the eye, and the discovery was as great a surprise to the patient as to his friends. The sharp edge of the gold had cut its way downward and come through the skin just below the lower eyelid.

AN EMPEROR'S ADVENTURE.

It has been truly said that courtesy costs nothing. When Dom Pedro II. was here it was proved beyond a shadow of a doubt that he was an early riser. One morning before breakfast his stroll extended to Charlestown. He walked to the monument, surveying its exterior from different points, then asked of a man who was sweeping out: "Can I go to the top of the monument?" "Guess you can if you try," was the curt, uncivil reply. "Shall I take the car?" "Take the car and anything else you can get!" was the next answer. The Emperor ascending to the top, enjoyed the view for a while and returned, paid the required fee with a courteous word, and was about to depart, when the man told him he "might put his name in the visitors' book;" and after the visitor left was not a little surprised and chagrined to find that his own rudeness had been directed to Dom Pedro II, Emperor of Brazil.

A ROOSTER'S EGG.

There has occurred a phenomenon in the barnyard of Mr. J. J. Turner that is inexplicable—a veritable rooster laying eggs. The rooster goes on the nest every day, and, after the functions of the hen have been performed, he comes off, utters a decisive cackle to the rest of the fowls and goes on about his business as though nothing had happened. This peculiar fowl has been watched closely, and he has been seen to go on the nest daily, come off cackling, and there was the egg. No hen was ever seen about the nest. This foul has aroused the admiration of our soul, and is an example worthy of the emulation of the husbandman. He has seen the toils and struggles of the overworked and greatly oppressed hens, and has come to the rescue.

A LIFE PRISONER.

A touching story of devotion is revived by the annual visit paid to John Warren, a life prisoner in the penitentiary, by his aged father, who lives on the old homestead in Mansfield, where the erring son was born. For a quarter of a century the old man has visited his son regularly once a year, driving from the old farm, thirty miles distant, his wagon freighted with good things from the convict's mother and sister. Warren's crime for which he is paying so great a penalty, was the murder of his 18-year-old wife, committed in Tolland County, twenty-six years ago. He was then but 22 years old, and while walking with his wife along a secluded road he dragged her into the Willimantic River and held her under the water until the was dead. The body was hidden under brush and leaves in the woods, where it was discovered. He manifested the utmost indifference when arrested, but his conduct while in prison has made him a general favorite with the officials. He is known as the "State Shoemaker," and cobbles shoes for the prisoners.

AN OREGON ROMANCE.

Yesterday a very romantic meeting took place at the Quimby Hotel in this city. It appears that just twenty years ago the Rev. A. K. Crawford, met an estimable lady in one of the Eastern States, and the young people soon learned to love one another. In time they were engaged and the day set for their marriags. A trifle light as air caused a quarrel, and this in time led to an estrangement and the engagement was finally broken in a moment of anger, and they drifted far apart on the sea of life. During the interim between their parting twenty years ago and their meeting yesterday Mr. Crawford has been married twice and the girl he left behind him once. The three partners of their joys and sorrows have passed to the great beyond, and they found themselves hurrying on toward the winter of life, one without a husband and the other without a wife. The Rev. A. K. Brawford, the hero of this romance, has been sojourning in the neighborhood of Olympia, and within a few months he opened correspondence with the lady whom he had loved in his early youth. The tone of the answer he received convinced him that she still charished an affection for him, notwithstanding all the years that they had been separated. A marriage proposition was sent by him, and it was accepted. Saturday's train brought Mrs. A. M. Bowdish to this city, and in the meantime the wires had performed their duty so well that the Rev. A. K. Crawford arrived from the Sound, and the two so long parted met. Those who were present at the time say the sight was full of pathos. A marriage will of course follow to finish the romance of a meeting after twenty years.

THE STORY OF AN EGG.

Of an iron egg in the Berlin Museum the following story is told: Many years ago a prince became affianced to a lovely princess, to whom he promised to send a magnificent gift as a testimonial of his affection. In due time the messenger arrived, bringing the promised gift, which proved to be an iron egg. The princess was so angry to think that the prince should send her so valuless a present that she threw it upon the floor, when the iron egg opened, disclosing a silver lining. Surprised at such a discovery, she took the egg in her hand, and while examining it closely, discovered a secret spring, which she touched, and the silver lining opened disclosing a golden yoke. Examining it closely she found another spring, which when opened disclosed within the golden yoke a ruby crown. Subjecting that to an examination she touched a spring and forth came the diamond ring with which he affianced her to himself.

"Why does the woman stand at the corner with her gaze fastened on a house in the center of the block?" "Because she sees a red sign on the house, and she thinks the place will suit her." Now she is walking down. Yes, she likes the location. It is handy to the cars, and people on either side look as if they would lend their flat-irons and wash-tubs." "Does she ring the bell?" "She doth. It is answered by a solid woman with a sort of nitric-acid eye." "And after she has asked how much the rent is, and how many children the neighbors have, and what society can be looked for, and whether the landlord is willing to make repairs, what happens?" "Oh, nothing much. The solid woman draws herself up, shuts her teeth hard, and points to the sign and hisses. 'Idiot! Can't you read!'" "And then?" "And then the other backs down the steps, reads: "Scarlet-fever here'!"

A lady called on a friend who had only been married a few years, and was surprised to find her in tears. "I am the most unhappy woman in town, and it's all on account of my husband." "Why, your husband lives for you alone. He stays at home all the time; he never goes away from home; he never brings any friends of his to the house." "Yes," replied the unfortunate woman, putting her handkerchief to her eyes and sobbing convulsively, "that's—what—makes me—so—miserable."

"Your little birdy has been very, very sick," she wrote to the young man. "It was some sort of a nervous trouble, and the doctors said I should have perfect rest and quiet, and that I must think of nothing—absolutely nothing. And all the time, dear George, I thought constantly of you." The young man read it over, and then read it through again, very slowly, and put it in his pocket and went out under the silent stars, and kept thinking, and thinking, and thinking. But he didn't say anything. He only kept thinking.

A gentleman presents himself at police headquarters, and asks to have a general alarm sent out for his daughter, who is believed to have eloped with the coachman. "Describe her, if you please," says the sargeant. "Well, she is dark complected, and wears a thingummy kind of a dress, cut bias, and, as to her age, why, she is two or three years younger than you'd take her to be."

Were it left me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate to prefer the latter.—[T. Jefferson.

REJECTED MANUSCRIPTS.

The Difficulties Under Which Authors Labor.

No true success has been attained in authorship without repeated failures and much struggling. The amateur who had his first contribution "returned with thanks" is apt to consider himself an ill-used individual, forgetful of the fact that an editor must endeavor to please his readers by only placing before them the most suitable matter obtainable. If the amateur would only reflect for a moment, he would generally find the fault his own and not the auditor's. The business of the latter is to select the best and most suitable work, which he generally does, regardless of personal considerations. Experienced writers, of course, have better means of knowing what is exactly required; but novices need never fear that their contributions will be overlooked because they occupy an obscure position in life. Merit will always assert itself in the end: nay, carelessnpss will sometimes work wonders. A writer has been known to have a paper rejected by a score or so of editors in turn, and then, when carefully rewritten, it was readily accepted by the editor who had been the first to refuse it. Sometimes, however, through mistake, merit as well as incompetence receives rebuffs. When the poet Campbell sent one of his best known lyrical pieces to a provincial newspaper, he had the mortification to read in its notice to correspondents that his lines were not up to the standard of excellence required by the editor of that obscure print! In the same way Tom Hood's "Song of the Shirt" was rejected in two or three places before it fell into the hands of the then editor of Punch, Mark Lemon. This was to have been its last chance; so it was accompanied by a note to the effect that if unsuitable it might be destroyed, as the author did not wish to have another sight of it. When the poem was read at the weekly dinner at which the contents of the forthcoming number of Punch are discussed among the proprietors and contributors, every one thought it was unsuited to the nature of the publication, except the editor himself. He was determined to have his own way for once, and he had it. The poem duly appeared, with the result that the circulation of Punch was more than doubled. The reading public was taken by storm, and the pitiful condition of the seamstress ameliorated without loss of time.

To some persons it may be surprising to learn that "John Gilpin," the far-renowned hero of burlesque, was coldly received by the public on his first appearance. It was not till an actor thought fit to recite the famous ride on the stage that the poem sprang into popularity.

"Pickwick," the immortal, is said to have run a very narrow chance of being doomed to oblivion. The book was brought out in numbers, which were written as they were required for the press. The public refused to buy the earlier ones; and to say the truth, they gave little promise of the ability that was displayed later on. The publishers, thinking they had entered into a losing speculation, were about to discontinue its further issue, when "Sam Weller" came on the scene, and introduced them to a veritable gold mine. At the outset of this book the versatile author was heavily handicapped. An eminent artist had been employed to draw some ridiculous scenes illustrative of Cockney sportsmanship, which he was required to work into story. After supplying a few of the first pictures, the artist died. His successor, instead of supplying the author with subjects, had his labors wisely confined to the illustration of the text.

When Godwin submitted "Caleb Williams," the work on which his fame principally rests, to the judgment of another man of letters, he did all in his power to dissuade him from publishing it, saying that it would be the ruin of his literary reputation. But for this book, as a matter of fact, he would not be forgotten, except as the father-in-law of Shelley. With all our enlightenment in modern times, mistakes are frequently made in regard to books that will take, even by the publishers, who should be the best of judges. Would anyone believe that "Self-Help," a book that has had an immense sale, as well as a vast influence for good, was at first refused because it was thought unlikely to pay the expense of printing?

The gentleman who is known to fame as Cuthbert Bede in the course of a lecture which he lately delivered at Stamford on light literature, stated that the publisher of his book, "Verdant Green," told him that it would not pay for advertising, whereas 170,000 copies have been sold. Lord Lytton's novel "Pelham," might also be included in the rejected list. It was on the point of being returned to its author, when the publisher happened to take up the MS., and, having read the first chapter, at once reversed the verdict of his "reader." "Vice Versa," a book which has passed through more than twenty editions in less than twelve months, was rejected at least once, if not twice, before it saw the light. Will Carleton's "Over the Hill to the Poorhouse" was thrown into the waste basket. "The Fool's Errand" was refused by several publishers, and so was "Uncle Tom's Cabin." Although Thackeray sent his "Vanity Fair" to every place where it would have a chance of being accepted, he was obliged at last to have it printed at his own cost. There is something unaccountably strange in the fact that one of the first writers of the nineteenth century should have a difficulty in getting his best known book introduced to the public, and still, perhaps the greatest work of the century, Carlyle's "French Revolution," was rejected. Thackeray used to say laughingly, that it was amusing how little he earned when in his early days he wrote carefully, and how much he received for poor work after he had acquired name. If the pay was always proportioned to the merit of the writing, Milton's "Paradise Lost" would not be so often quoted as an instance of the small gains of great authors. Who has not been delighted with the humor and homely descriptions in that most charming of all stories, "The Vicar of Wakefield"? and yet the publisher who gave £40 for the MS. was afraid to risk the cost of having it printed till Goldsmith had made himself a famous poet. It has since become a treasure to every civilized people on the face of the globe, through the medium of translations and none can say but they are infinitely richer for having it. The intellectual pride of all Germans, their poet Goethe, professed to have been introduced to a new world when he made the acquaintance of the honest English vicar and his fair daughters. There is a lesson in his life which will cast a glow over the sufferings of oppressed virtue for ages to come.

Washington Irving, the American who created Rip Van Winkle, could not find a publisher for his "Sketch Book" that would take the risk, and so it was first printed at his own expense. Cooper, his countryman, was equally unfortunate with his famous novel, "The Spy." He was an unknown author, and by Gifford's advice the publisher to whom he offered the MS., declined it. The reviewer made a blunder, for as soon as the book appeared its success was instantaneous.

"Jane Eyre" is sometimes stated to have gone a weary round of publishers, but this is a mistake. The MS. that bore ample tokens of having passed through almost every publishing house to be declined by all, was "The Professor," which, however, was probably the means of finding a resting place for the more famous work. "The Professor" would only fill one volume, and for reasons best known to themselves, the "trade" object to novels of less than two or three. Messrs. Smith, Elder & Co.'s reader discovered so much merit in the wandering MS., of the one volume that it was returned to its unknown author, accompanied by a polite note, saying they would be happy to give their best attention to a longer work from the same pen. "Jane Eyre" was written in the meantime, and immediately forwarded by the courageous governess to the only place from which she had ever received any sympathy. Within a month it was printed and introduced to the public. At first it was received somewhat hesitatingly, especially by the critics, who scarcely knew what to make of it. The public were not long in deciding for themselves. The authoress was famous before she was aware. "The Professor" was afterwards brought out in the shadow of this fame, but not till after her death. When it appeared, the Saturday Review and other journals gave it a more hearty welcome than they had ever accorded to the book which made her famous. There is much in a name. The late Anthony Trollope, whose gains are probably exaggerated when it is said that he made a hundred thousand pounds by his writings, could, beyond doubt, command as much as three thousand pounds for a novel; yet he, in his earlier years, before he became known to fame, had to be content with a score as the result of a year's labor.

Dssolving Views.

Mr. De Blank—"Here is a notice of Sergt. Ballantine's book on America, entitled "From the Old World to the New."

Mrs. De Blank—"What! That delightful English gentlemen who dined with us last season the author of a book on this country? Oh! do read the notice. I almost fell in love with him."

Mr. De Blank (glancing down the column)—"He says that American women far excel their English cousins both in beauty——"

"Oh, the darling!"

"And intellect."

"How delicious!"

"But that American cooking is abominable."

"The brute? I knew the moment I set eyes on him that he was nothing but a mean, miserable, stuck-up prig, who——"

"He refers only to hotel cooking."

"Oh! Do get the book."

They were expecting the minister to dinner.

"Is everything all ready, my dear?" asked the head of the house.

"Yes, he can come now as soon as he likes."

"Have you dusted the family bible?"

"Goodness gracious! I forgot that."

One day baby heard a dreadful squealing in a neighbor's pig sty.

"What makes that pig squeal so?" asked mamma.

"I fink dey're spankin' he," said baby, solemnly.

If you would be wealthy, get upon a mule. You will soon find you are better off.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No. 221, F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensiung Masonic year as follows:

Saturday	January 24th
"	February 28th
"	March 28th
"	April 25th
"	May 23d
"	June 27th
"	July 25th
"	August 22d
"	September 19th
"	October 17th
"	November 21st
"	December 19th

Members and visiting brethren are cordially invited to attend.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, FEBRUARY 7, ... 1885.

C. Mulholland,
EDITOR & PROPRIETOR.

A LEGAL contest for the office of sheriff has just been decided in Esmeralda county, Nevada, in favor of E. B. Cushman, the Republican candidate. Mr. Cushman is now in possession of the office.

THERE will be a large increase this spring in the acrage of orchard and vineyard in Owens valley. At the Fort Mr. J. Gorman and Mr. F. Schabell are now busily engaged planting fruit trees and vines and in other parts of the Valley similar work is being done.

IF THE cause of Ireland had not the support of such men as Parnell, the stupid cruelty of the dynamiters would estrange the sympathy of all nations from the Irish people in their struggle against English oppression. The virtue and wisdom of Parnell attract support and sympathy that the vice and folly of the dynamiters would repel. The late acts of the dynamiters in London, were so cruel, and show such an utter disregard of the lives of innocent persons, even women and children, as to intensify the disgust already existing against them.

A LIST of the attaches of the present Legislature excites astonishmeut, not unmixed with indignation. The army of useless people, needlessly employed, is a disgrace to the Legislature, and a shameless robbery of the people. Already the contigent expenses of this Assembly exceed by nine thousand dollars the contingent expenses of the preceeding Assembly, and that was bad enough. Every dollar of this excess, and many thousands more, has been filched from the tax payers for the benefit of hangers on, leaches who suck the blood of those who have to toil hard for every dollar of coin, every mouthful of food they get.

THE session of the Legislature is now more than half gone, and nothing has yet been heard in Inyo county of the idtroduction of a bill for the amendment of the County Governments bill, so far as it applier to salaries of county officers. When bills are introduced affecting local interests, it is usual for representatives in the Legislature to send copies of such bills to the local papers, that the people most interested may be informed of the character of the the proposed legislation. Perhaps some measure such as the people of Inyo petetioned for may have been introduced, and Mr. Van Voorhies may have forgotten to inform his constituents in Inyo of the fact.

THE subject of irrigation is doservedly receiving a good deal of discussion in the Legislature. No other interest more nearly concerns the future prosperity of the state, and already more abuses exist in connection with this interest than with any other in the State. The nature of these abuses is shown by a statement made by State Engineer Hall, before a committee of the Legislature. There are three bills on irrigation now before the Legislature, and being called to give his views on the character of these measures "Mr. Hall said he had found much investigation necessary in the course of his own labors. He found two claims on the San Joaquin river to all the waters in the river, and a similar claim filed against the Kings river. He had found a claim for 1,500 cubic feet per second where the canal of the claimant could not conduct more than one third of that amount. These and many other similar discoveries showed the necesity of an official investigation to settle the nature of every claimed water right and the proportional facilities of claimants to carry out the conditions of their claims. Otherwise, irrigation districts would be formed with false and misleading data to work under. The second bill he refered to was for the organization and operation of irrigation districts. Such districts had been formed in Spain with the result that many of the holdings in that country were less than an acre, and in France the same system had reduced the average holdings to about ten acres. In Italy, where no irrigation districts exist, water monopoly and land monopoly by the few, and miserable poverty among the masses mark the result. If this Legislature neglects to pass some irrigation law, he said, there will be a deadlock in the San Joaquin valley between parties now contesting different principles in the matter of distributing the water available." The reference made by Mr. Hall to the condition of the people of Italy deserves more than passing note. Their wretched condition he ascribes to the monopoly of land and water. But the people of California are not so docile and patient as the Italians, and unless the evils now existing in connection with property in water are remedied, there will be serious trouble. Already many lives have been sacrificed in disputes about water, and the increase of population will be sure to multiply and intensify these disputes, unless some wise legislation shall be had, and that soon.

THE Nevada Silver Convention met at Carson last Saturday. There was a full attendence of delegates from all parts of the State. The Convention has organized a permanent Association to protect the silver industry. In the discussion of the Silver problem in the the Convention, Colonel Shaw of the Virginia City *Enterprise* touched the very heart of the difficulty. He called the attention of the convention to the fact that the first blow aimed at silver in this country was when, in 1853, Congress reduced the weight of a dollar in fractional coin from 412.5 grains to 384 grains. Two half dollars of the present coinage under existing law is now only about seventy-eight cents. There are some $75,000,000 of fractional coins. To bring them up to the same weight proportionately as the standard silver dollar of 412½ grains would require the purchase by the Government of about 10,000,000 ounces of silver. The recoinage of the subsidiary silver currency would create a demand for much of the silver now lying idle. On his motion the Committee on Resolutions were directed to consider the subject.

THE planet Jupiter is an object of the greatest interest to astronomers. The present position of the planet in opposition, that is, at the point of his orbit nearest the earth, would afford good opportunity for the study of one very remarkable and mysterious phenomena that are constantly seen on his disk. But at this season of the year, the weather is so changeable where all the observatories having the necessary instruments are located, that the opportunity offered by the position of the planet cannot be made available for the study of those phenomena. Here in Inyo county, on either of the chains of mountains that bounds Owens valley, an observatory would be certain of having the most favorable weather for making observations at all seasons of the year. A cloudless sky and still, clear atmosphere are the most desirable conditions, and on no other mountains in the world do such conditions more uniformly prevail than on the Inyo and Sierra ranges where they bound Owens valley.

THE "PROMINENT CITIZEN."

The "prominent citizen"—that individual of negative virtues, so mindful of his own personality on public occasions; whose main object in life is to ride in the wake of popular characters, or to officiate as vice-president at every local assembly, or to perch, like an owl, solemn and dull, upon the prow of every enterprise set going in the community of which he is simply an ornamental member—should be suppressed. He is an "ancient and honorable" humbug. The objection to him is decidedly serious. He stands in the way of more useful, but less presumptuous men. It is not putting it too strongly to say that people living at a distance from any of the great cities, obtain the idea from the papers of those cities that about a score of families in each comprise all there may be of social respectability, culture, wealth, intelligence, and solidity in them. These personages figure conspicuously in watering-place gossip, in the personal columns of their home papers, and form a part of the reporter's stock-in-trade. When the stranger visits any one of the cities referred to, he is astonished to find upon the fronts of great, substantial, prosperous-looking mercantile houses and manufactories' signs bearing names which he has never seen in the papers of the town, and he naturally wonders if their owners are regarded as of no especial account in the make-up of the city. He then inquires as to those "prominent citizens," only to find that they have never done anything in particular to shed glory upon the city, that the wealth they may possess is employed simply for their own comfort, and that, while their names are so frequently observed in lists of reception committees and "among the notable people present," they rarely lead in charity subscriptions. His amazement, thereupon, naturally grows to see the very men who seem to own the great factories and mercantile houses—for instance, down in that wholesale quarter where everything is so solemn, so substantial and so formidable looking—should be so entirely disregarded. Verily he must speedily reach the conclusion that the substantial citizen does not belong to the delectable "prominent" coterie, and his conclusion would be in line with absolute truth. The "prominent citizen" has no mission upon earth except to maintain his own notoriety as such, and he should therefore be easily dispensed with. His presence is a discouragement to the young and ambitious men of his community who are eager for opportunities to do something for the public good. He is constantly seeking and getting the best seat in the boat, to the discomfort of those who have greater reason to be similarly favored. He always secures the most desirable positions on the stage of a convention hall, though attending only to show himself, while men deeply interested are forced to clamor for admission to remote corners of the galleries. He is the most striking specimen of the American tuft hunter. He is always aggressively selfish. He never proposes anything, but always seeks to get alongside of those who do. He is ever ready to sign petitions and to contribute his name, but he signs few checks and contributes little money. Altogether, he is an excrescence that should be cut off He fattens too much off the vitality of others, and, although he goes through life as a general make-weight, his usefulness in that respect is easily dispensable, for there are others who would be of greater value even in that capacity. Let these "prominent citizens" be sent into retirement. Their room is much more desirable than their company.—*New York Current.*

Troy, N. Y., manufactures 36,000,000 linen colors every year, besides 3,360,000 shirts.

OFFICIAL.

Delinquent Tax List

For 1884,

INYO COUNTY,

CALIFORNIA.

Ah Chor—Lot No 4 in block No 6 in the town of Hawley, personal property, 1 poll tax 1 hospital tax ..... $ 12 27

Parker, viz: Printing presses and materials of the Inyo Independent, created by mortgage to secure a debt given by James E. Parker to E. Robinson et al, dated October 22 1881, and recorded in book "A" of chattel mortgage, page 118, value $700 41 95

Public Notice

Is hereby given that unless the above taxes and costs are paid I will on

Monday the 23rd Day of February, 1885,

Between the hours of 9 o'clock A. M. and 4 o'clock P. M., to wit, at the hour of 10 o'clock A. M., commence to sell the above described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day according to adjournments until the whole real property above described, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each ass ssment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 26th day of January, A. D. 1885.

JOHN S. MCGEE,
Sheriff and Ex-Officio Tax-Collector, Inyo County, California.
By J. J. MOORE, Deputy.

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARKE, AN INSOLVENT DEBTOR.

JOHN CLARKE HAVING FILED IN THIS Court his petition schedule, and inventory in insolvency, by which it appears that he is an Insolvent debtor, the said John Clarke is hereby declared to be insolvent. The sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clarke, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation or association for his use. The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered It is further ordered that all creditors of said debtor be and appear before the Hon. John A. Hannah, Judge of the Superior Court, of the county of Inyo, in open Court, at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m, of that day, to prove their debts and choose one or more assignees of the estate of said debtor

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed

JOHN A HANNAH,
[SEAL] Superior Judge
Attest, THOMAS CROUGH, Clerk
Dated, January 2, 1885.

STATE OF CALIFORNIA, } ss
County of Inyo, }

I, THOMAS CROUGH, County Clerk of the county of Inyo, State of California, and Clerk of the Superior Court, do hereby certify that the foregoing order of Adjudication is true and correct as the same remains in this office.

IN WITNESS WHEREOF I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo this 21 day of January, 1885.
{SEAL}
THOMAS CROUGH, Clerk,
By ALEXANDER CLARK, Deputy Clerk.

Blake, for the E ½ of N W ¼ & W ½ of N E ¼ Sec. 21. Tp. 9 S R 34 E, M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: E H. Blake, S. J. McMurry, P. W. McMurry and J. J Stevens, of Big Pine.

D. WALKER, Register

NOTICE.

NOTICE IS HEREBY GIVEN TO ALL VOters in Bishop Station School District to be present at the house of Barton McGee in said district on the 17th day of February, 1885, for the purpose of voting on the question of levying a tax of $800 for the purpose of building a school house.

Signed, H. A. MANN,
G. A. DIELDER,
B McGEE.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 7, ... 1885.

—Many idle miners in Candelaria; so says the *True Fissure*.

—Tom McDonough is at Lone Pine, laid up with rheumatism.

—A thousand men are at work making a railroad through the Cajon pass.

—During the past week bees have been very buisy working on the willow blooms, and other early budding plants

—A bill has been introduced in the Assembly providing that 6 per cent. shall be the lawful rate of interest in this State in future.

—New Orleans papers acknowledge that for variety and general excellence of products, the fruit display of California surpasses all others.

—The mills at Belleville are ready for a start, if they are not already started. One will be supplied from the Mount Diablo and Holmes mines.

—The attention of Road Masters in invited to Ordinance No 11, of the Board of Supervisors, publisned in another column.

—During the week the weather has been very warm, at mid day causing more discomfort than during the summer months. Then a fresh breeze blows every day in Owens Valley; now the air is still and not.

—Those who are contemplating going to Los Angeles for employment had better remain at home for fear their expectations should not be realized. The *Express* of a recent date acknowledged that there is something like 1000 men out of employment.

SCHOOL CLOSED.—The term of the Bishop Station school closed last Friday. Miss Minnie Thomson, the teacher, returned home on Monday.

FIELD FIRE.—A field fire got started last Monday east of Big Spring and spread over a large area, the grass being thick and dry. No particular damage was done.

A FERRY WANTED.—It would be a great public convenience to establish a ferry across the lake that is now in the road near the Fort. Perhaps it would be as well to drain the lake, however.

LETTER LIST.—Following is the list of unclaimed letters remaining in the Post office at Independence February 5, 1885: Brown, M. T.; Hamilton, Wm.; Metson, W. H., 7; Reilly, Edward; Wolff, A.

WANTED.—An immediate return to the INDEPENDENT Office of a book belonging to J. E. Parker. It is Bryant & Stratton's text book on book-keeping and as the same has been out long enough for the borrower to have had full benefit thereof it is hoped the volume will be forthcoming at once.

THIEVES ABOUT.—A few days ago a beef hide and a butchers knife were found hidden under a bridge, between Bishop Creek and the depot. The brand had been cut off, and the inference is plain that an animal had been stolen and slaughtered. Ranchers should keep close count of their stock.

CELEBRATION.—Washington's birth day will be celebrated at Keeler. Mr. and Mrs. Barns will take that occasion for making a formal opening of their fine new hotel, and for having a good old time house warming. As the birth day falls on Sunday, the celebration will be held Monday. The train on the C. and C. railroad goes down at a very convenient hour for those who want to attend the party in the evening. See the notice in another column.

ADJUSTING INSURANCE.—Mr. Sexton, an agent for insurance companies, was at Elna this week adjusting loss by the recent fire. The property was insured for $15,000, of this amount $10,000 is in favor of Hoit & Co., mortgagees; the remaining $5,000 is in favor of Ranken, Brayton & Co., Pacific Iron Works, San Francisco. The parties who were running the furnace had no insurance. Mr. Sexton cannot determine the exact amount of the loss until he returns to San Francisco; he went north on the C. & C. railroad last Thursday morning.

PARDONED.—It is a contradiction in terms, and a sad comment upon human judgment, when a man is "pardoned" for a crime he never committed. Yet a "pardon" is the only way an innocent person can be relieved from the effects of a mistaken conviction when accused of crime. Writing from Sacramento last week Mr. A. R. Conklin says; "I have just seen the Governor in relation to the pardon of Charles Baker, who was wrongfully and inhumanly convicted some three years ago, of robbery in Inyo county, and was sentenced to ten years in San Quentin prison. The Governor will issue his pardon early next week. It is therefore probably that Baker is now a free man."

GHASTLY HURTS.—Some days ago, Bennie Wheeler, a twelve year old boy, was riding on horseback a few miles below Independence. A band of horses passing in an opposite direction were met by the boy and his horse shied, or was crowded, against a barbed wire fence. The barbs tore the boy's leg and mangled it so terribly that men were made sick by the sight of it. The little fellow was brought to town and Dr. Blair put many stitches in the cuts and did every thing possible to bring ease to him. Bennie is now at the house of Mr. Baxter, where he is well cared for and his hurts are rapidly healing. The mother of the boy is dead; his father went to Los Angeles some months ago, but he makes good provision for the child.

Mining Items,

COLUMBIA MINE.

At the beginning of the year Frank Silva made a relocation on the Columbia mine, at Darwin, a claim on which a good deal of work had been done some years ago, but which had been abandoned in the interval. Silva began work at some distance from the old shaft, and after clearing away some oose stones and earth struck a vein of good ore. He now has a new shaft down about forty feet, and at that depth the ledge is two and a half feet wide and the ore is of good quality.

WHITE HILL MINE.

Alexander, Barnes & Kehoe are loading cars with ore from their mine the white Hill in Beveridge district. The ore will be sent to Selby & Co., San Francisco Mr Alexander reports the mine looking well. He says, "If it keeps up it's lick we're all right."

LUCKY JIM MINE.

Mr. J. S. Gorman has men at work in the Lucky Jim mine, at Darwin. A good supply of ore has already been got out and the furnace will soon be started for a run.

Wedding.

Last Thursday evening a large company gathered at Independence Station to attend the wedding of Miss Kate Clayton and Mr. P. J. Fields. The ware room at the Station was handsomely draped with flags on the inside and brilliantly lighted, and with this preparation made a very pleasant hall, where the company assembled. On one side of the hall tables were already set before the company arrived, and with the long array of fine fruits, decorated cakes, silver and glass ware added much to the attractiveness of the scene. At seven o'clock the young couple entered the hall, Miss Clayton attended by Miss Maggie Dalton as bridesmaid, and Mr. Fields by Mr. Bertrand Rhine as groomsman. Miss Clayton wore a dress of navy blue silk, lace veil and orange blossoms. The marriage ceremony was performed by C. Mulholland, Justice of the Peace. A brief time being allowed for congratulating the newly made husband and wife the company sad down to supper. And here the culinary genius of Mrs. Galvin, sister of the bride, shone resplendent. The variety of good things provided was such as only California earth air and water can produce, and all of these in such profusion as has spread the fame of California hospitality the world over. After supper the hall was cleared for dancing, in which all the company joined until "The rising moon began to glower" over the summits of the Inyo mountains, when, with hearty good wishes for the young couple, the guests departed, all declaring they had spent a pleasant evening. Mr. and Mrs. Fields went north on the train this morning for their home at Belleville.

Personal Mention.

Dr. Marotte, formerly of Candelaria, has located at Calico.

Mr. A. Spencer of Bishop Creek was in Independence yesterday.

Mr. Bell, Warden of the State Prison at Carson, has been reélected to that position by the Legislature.

Miss Jennie Yandell, of Bishop Creek is on a visit with friends at Independence and vicinity.

Harry Burt of Big Pine took a turn with the boys of Independence this week; he made it lively while he staid.

Mrs. Lillie Boland of Keeler has been in town all the week, in company with her husband, Mr. T. C. Boland, Chairman of the Board of Supervisors.

G. H. Palmer was up from Lone Pine this week. He mentioned as a curious fact that he had not taken a drink—of water in the last two months.

Fred Burckhardt, the watchmaker from Lone Pine is in town, and will be at the Blaney house for a few days. Parties having watches, clocks or jewelry to repair should give him a call.

Joe McDermot came in yesterday from Freeborn canyon; he says the snow is yet two feet deep on the east side of the Inyos, but is now very soft, and going off rapidly. The trip across the mountains is now no easy matter.

SCHOOL REPORT.—The school at Station District closed January 30th. Owing to want of funds the term was very much shortened. The following is the report for the term commencing November 3, 1884, and closing January 30, 1885: Number of days taught, 55½; whole number of days attendance, 947½; whole number of days absence, 27; whole number of days tardiness, 32; number of boys enrolled, 11; number of girls enrolled, 10; average number belonging, 17.6; average daily attendance, 17; percentage of attendance, 96. Roll of Honor for January: Willie Dehy, 99; Appleton Plumley, 96; John Dehy, 97; Franklin Huckaby, 95; Hattie Man, 98; Minnie McGee, 85; Edie Huckaby, 89; Estella Man, 89; James Dehy, 90. M. THOMSON, Teacher.

SUPERVISORS.—The new board of Supervisors met last Monday. The members are Thomas C. Boland, George Stevens, J. D. Blair, J. C. Eddy, and J. D. Harger; all of whom were present when the meeting was called to order. An organization was effected by the election of Mr. Boland as Chairman. A great deal of business awaited the action of the Board, occupying the whole time of the members every day of the week, up till the time of adjournment yesterday afternoon. A good deal of attention was given to the subject of roads. The business of the Board was continued up till near the time of going to press with this issue of the Inyo. so that there was not time to publish a full report of the proceedings. Next week, however, a complete report of all the proceedings will be given.

SHUT DOWN—Last evening the Osbiston shaft was shut down and all hands discharged. Most of the employees were discharged some days ago but yesterday was the windup for all hands. Everything belonging to the mine was put in good condition previous to the shutting down and work can be resumed at a moment's notice.—*Enterprise.*

BORN.

LE CYR—At Daggett, Cal., Jan. 21, 1885, to Mr. and Mrs. Joseph Le Cyr, a son.

MARRIED

FIELDS—CLAYTON—At Independence Station, February 5, 1885, by C Mulholland, J. P., Mr. P. J. Fields and Miss Kate Clayton.

NEW ADVERTISEMENTS.

NOTICE FOR PUBLICATION OF TIME.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF THE ESTATE OF W. A. BAKER, Deceased. Notice for publication of time appointed for proving will, etc.

NOTICE IS HEREBY GIVEN, THAT MONDAY, the 23rd day of February, 1885, at 10 o'clock a. m. of said day, at the Court Room of said Court, at the Court House, in the County of Inyo, has been appointed as the time and place for proving the will of said W. A. Baker, deceased, and for hearing the application of Fannie F. Baker for the issuance to her of letters Testamentary thereon when and where any person interested may appear and contest the same.

Dated, Feb 5, 1885.

W. L. HUNTER, County Clerk

ORDINANCE NO. 10.

The Board of Supervisors, County of Inyo, State of California, do Ordain as Follows:

SEC. 1. Every male inhabitant of this county over 21 and under 60 years of age, and liable to pay a State poll tax, must annually pay a poll tax of two dollars, to be known as the hospital poll tax, provided the same be paid between the first Monday in March and the first Monday in July; but if not paid prior to the first Monday in July it shall be three dollars.

SEC. 2. Said hospital poll tax shall be collected by the same persons and in the same manner as provided by law for the collection of State poll tax and the same percentage shall be allowed for collection.

SEC. 3. The proceeds of the hospital poll tax must be paid to the County Treasurer for the exclusive use of the hospital fund of Inyo county.

This Ordinance shall take effect and be in force on and after the 25th day of February, 1885, and it is hereby ordered that this Ordinance be published for one week in the Inyo INDEPENDENT, a weekly newspaper published and printed in Inyo county. THOMAS BOLAND, Chairman.

[L. S.] W. L. HUNTER, Clerk.

By Thomas Crough, Deputy

Adopted this 5th day of February, A. D. 1885. Ayes: Thomas Boland, J. D. Harger, J. D. Blair, George Stevens. Absent, John C. Eddy.

{SEAL} Attest: W. L. HUNTER, Clerk.

By Thomas Crough, Deputy.

ORDINANCE NO. 11.

The Board of Supervisors of the County of Inyo State of California, do Ordain as Follows:

SEC. 1. Each male person over 21 and under 55 years of age found in each road district of the County of Inyo between the first day of March 1885, and the thirty-first day of December, 1885, and who has not already paid the same in some other district, must pay to the road Overseer of such District, or a road Commissioner when there is no road Overseer, a road poll tax of two dollars, provided that the same be paid between the first Monday in March, 1885, and the first Monday in June 1885 work out his road poll tax so levied by performing two days labor on the roads of his district, such work to be done under the direction of the road Overseer or road Commissioner; the road overseer or road Commissioner shall give each person performing such labor a certificate thereof

SEC. 2 At the expiration of the time fixed by Section 1 of this Ordinance within which time any person may work out his road poll tax said poll tax shall be due from every person liable as aforesaid not holding a certificate that he has performed such labor and shall be collected by the various road Overseers or road Commissioners when there is no road Overseer in their respective Districts and in the same manner that State poll taxes are collected.

SEC. 3 For the purpose of collecting road poll taxes every road Overseer, or in case there is no road Overseer the road Commissioner is hereby invested with the same power and authority as the Collector of State poll taxes, and all the remedies given by law for the collection of state poll taxes shall apply and be in force for the collection of road poll taxes.

This Ordinance shall take effect and be in force on and after the 25th day of February A. D 1885 and it is hereby ordered that this Ordinance be published for one week in the Inyo INDEPENDENT, a weekly newspaper printed and published in said county of Inyo THOS. BOLAND Chairman.

[L. S.] Attest: W. L. HUNTER, Clerk,

By Thomas Crough, Deputy.

Adopted this 5th day of February, A. D 1885, by the following vote. Ayes: Thomas Boland, J. D. Harger, J. D. Blair, George Stevens. Absent, John C. Eddy.

{SEAL} Attest: W. L. HUNTER, Clerk,

By Thomas Crough, Deputy.

ORDINANCE NO. 12.

The Board of Supervisors of the County of Inyo State of California, do Ordain as Follows.

SEC 1. Every person who commences or carries on in the County of Inyo any business, trade profession or calling for the transaction or carrying on of which a license is required by any Ordinance of the Board of Supervisors of said county without taking out or procuring the license prescribed by such ordinance or ordinances is guilty of a misdemeanor and shall be punished by a fine not exceeding one hundred dollars, and unless such fine shall be paid, shall be imprisoned in the county jail of said county until such fine be satisfied, such imprisonment not to exceed one day for each dollar of the fine.

This Ordinance shall be published in the Inyo INDEPENDENT, a newspaper published in said Inyo county at least one week, said publication to be within fifteen days after the adoption thereof, and said Ordinance to take effect and be in force from and after the second day of March, 1885.

Adopted by the following vote. Ayes: Thomas Boland, J. D. Harger, J. D. Blair, George Stevens and J. C. Eddy. Noes: None. Passed and approved the 6th day of February, A. D 1885.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 7, ... 1885.

A Donation Party.

There was a sound of revelry by night.

The flickering rays of the street lamps fell upon the joyful ones as they gathered themselves into the feast, for lo! they reasoned one with another, hath not the preacher said: "There is nothing better for a man than that he should eat and drink, and that he should make his soul enjoy the fruit of his labor." So they got themselves up unto the house of feasting, and bore their countenances merrily. And it was so that the Painted Pine Pail called aloud unto the Cheap Hearth Broom, and said:

"Lo, there, thou fair one with the broom-corn band, whither goest thou?"

And the Cheap Hearth Broom answered, and said:

"Thou knowest."

And there met them in the way the hideous Dressing Gown, and the dozen Tin Spoons, and the Old Slippers, and the Square of Oil Cloth, and the Three Old Books, and the Kitchen Chair, and the Yard of Flannel, and the Cotton Tidy, and the Bag of Crackers, and the Awful Pen Wiper, and the Button Hook, and the Bar of Soap and all the Things.

And when they saw them they raised a mighty shout, insomuch that the watchmen of the city were awakened, and one said to another:

"Lo! a noise; let us hasten away lest we be called in."

For the watchmen of the city wist not what the racket was, and they were afraid, which of a verity was their normal condition.

Therefore said the Painted Pine Pail:

"You bet your blue handle."

And then came unto them the Tin Dipper and the Jar of the Tomato Preserves and the Peck of Beans. And they cried unto them, saying:

"Tarry a little, for we also journey your way."

And they were greatly rejoiced and went their way, and they sang and lifted up their voices, and shouted with an exceeding great shout, for their hearts were as light as a payroll.

And the Painted Pine Pail called unto the others, and said:

"Journey with our band, for we also go upon thy errand. Moreover, we likewise are going to the donation party."

And they joined the band.

And the Kitchen Chair said: "Of a surety there will be much good, for the matter is not a surprise, but the birds of the air carried the matter to the parsonage, and the parson's wife hath boiled and baked and brewed all day, that there might be an abundance of provisions, and cakes of fine meal and of barley, and oil, and wine, and ice cream and grapes, and White mountain cake, and Lady Jane Washington pie, and all that is good and expensive; for after this manner doth always the parson's wife when she heareth of a donation party."

"It will be the swell feed of all swell feeds," said the Old Slipper. And he was right.

"It will be the boss lay-out," said also the other Old Slipper. And he likewise was right. They were both right.

And they began to make merry.

And when they were come unto the parsonage they made as though they would enter in at the gates, but the gates were locked as with a skein of telegraph wire. Now the same was barred.

And there came to the door of the parsonage an Old Rag carpet, and he rolled himself up and leaned against the door-jamb. Now, he was old and stricken in years. Oft had he been beaten with rods, forty stripes plus a thousand and ten, and many times had he been put down, but as oft he got up and dusted the next spring. Neither was his natural force abated. Moreover, he carried a stair-rod in his hand, and spoke as one who meant business. And he said:

"Slide! Stay not upon the order of your going, but scatter! Vamose! Climb out of this! Verily, I was beaten but one day ago, and I am to be pasted down to-night, if, peradventure I may hold on to the boards until next spring. It's bad enough that a salary of $500 a year compels me to be tacked down with mucilage; may the beast of the field rant over me if I lie down to have this howling mob shuffle around on me, and grind cake and bread crumbs into my long-suffering pores. Stampede, or by the doom of Jericho I'll pass around the hat!"

And presently they began to fade down the dusky highway. And the Things sat down by the roadside and cast dust upon their heads. And the Old Slipper said:

"It seems that we are left."

And he was right. And the other Old Slipper said:

"I should say left. Verily we are distanced."

And he also was right. They were all left.

A Good One For Booth.

Edwin Booth was once playing Petruchio with an actress who was considerably larger than himself, and he thought she let go the whip too readily when, as Petruchio, he wrested it from the hand of Katharine. So, after the play was over, he said: "You must hold on to the whip with more firmness to-morrow night. Grasp it as hard as you can; I'll get it away from you, never fear." The next performance of Shakespeare's "Taming of the Shrew" came, and the melancholy-eyed tragedian, who, for the nonce, was essaying comedy, attempted to take the instrument of flagellation from his female "support.' It was no use. She held on to it with a grasp of iron, and the audience soon began to see the joke, and applauded the actress to the echo. Finally, out of pure good nature, she unloosed her hold and the play proceeded. When the curtain fell the actor had no further advice to give.

"WOMAN IN THE MIST."

A Legend of the Zaguna Indians Told On the Spot.

We had scaled the rugged, slippery, spray-wet face of the headland of Point Magne, L—— and I were smoking at our ease upon the flat, table-like top of the headland—a low but precipitous one, perhaps 200 feet in the perpendicular, jutting into the waters of the Santa Barbara channel, and marking the termination of the Guadalasca range of mountains and the boundary line between Los Angeles and Ventura counties. So steep is the point and so far does it project into the ocean, that the beach ceases here, and the great waves beating incessantly against the shale rocks have burrowed deep caverns at the cliff's base, into and out of which the creamy waters poured with many a hollow-sounding reverberation. It was twilight, and as the red of declining day grew paler in the west L—— removed his briarwood from out his mouth and quoted in a rich baritone:

I lay upon the headland bright and listened
To the incessant sobbing of the sea
In caverns under me;
And watched the waves that tossed and fled and gliistened,
Until the meadow of amethyst
Melted away into mist.

Then he was silent, gazing away over the water until the long night shadows dropped their gaunt garments down upon the distant islands and all the ocean world was veiled in darkness. Then there comes a faint tinge of the softest light low down upon the eastern bosom of the heaving sea. The light grows stronger and still stronger, and one by one the golden stars peep out from the dark curtain overhead. Faint rays of silvery fire shoot quivering toward the zenith, and the golden stars grow pale before the coming Queen of Night.

The summits of the low, dark, rugged chain of hills which skirt the coast catch the first brilliance of the rising satellite, and are brought out in rather startling relief. A faint disk of silver shows for a moment far out upon the rolling surface of the water. Suddenly the round moon like a champion full-panoplied to the lists, springs into clear view above the ocean—every rock and shrub and bush upon the mountain range comes distinctly into the picture, melting away into a soft, misty haze in the southeast, and a broad bar of light shoots gleaming across the sea and lies upon the darkness of the surrounding waves like a shining, molten band of quicksilver. The white-capped breakers, which send their long lines of foam bubbling in upon the narrow strip of beach beyond the cliff, recede across the sand in a thousand interlacing streams of liquid diamonds—and at our feet, far below they gather strength and dash their tremendous weight and force upon the rock, throwing their spray heaven ward in a myriad of opaline jets. Grandly weird was the scene, and the soul, leaving the body, seemed to go far away into the moonlight and become a part of the wild picture. Our pipes were out, and for hours no word spoken marred the dream of our contemplation. Then, the moonlight shining down upon his classic face like a halo of supernatural form, L—— sighed deeply, as though his soul had been fatigued in its efforts to absorb the transcendent beauty in which he revelled, and, turning to me a face across which the shadows of inspiration flashed and flickered, queried:

"Have you heard the legend which hangs like a deep mist around this headland?" Then, awaiting no reply, he continued:

"It is a story," he said, "of the time when the lowly Californian Indian fished and flourished in the large village whose graveyard only remains at Point Magne—a tale of the time when Junipero Serra and his mission were things of the yet distant future—a mystic legend which has come floating down through the Spanish occupation from the Indian days of long ago. Here, in those old days, a thousand rude canoes paddled daily out across the deep lagoon, and so into the open sea, returning with the flood tide laden with luscious fishes; and nightly from this headland, when the moon was bright, the village priest called his dusky followers to a rude worship of the "Woman of the Mist," upon whom mortal eyes had never gazed. Many moons ago, tradition said, the 'white woman' had shown the fathers of this tribe this fishing ground, and had stationed them there, saying that in the future she would return and conduct them, in some time of greatest scarcity, to a happier land. But this was long ago. Though fighting sometimes bitterly with surrounding tribes, the Magnes had bravely held the country surrounding the lagoon; and fish within the sea and shell-fish upon the sands of the lagoon had there always been in abundance. The tribe had grown rich and powerful and mightily increased in numbers, dominating all the country round about. At last the time of scarcity had come. Daily the boats went down into the sea, and returned each time with feebler rowers and fewer fish. Daily the sad-eyed women sought amongst the sand and rocks and seaweed for the shell fish which once had so abounded, and found—nothing. Babes dropped dying from the breast which gave them no nourishment. Famishing children lay down weeping on the white sand in the hot sunshine, and found no strength to rise again. Sad-eyed mothers wailed to Heaven for succor for the offspring which they could not save, and dark browed fathers disposed of their dead in silence, and cast sullen looks upon the young priest who went fearlessly among his people and predicted the speedy coming of their 'white woman.'

"Nightly now the well-nigh hopeless tribe assembled for their worship, and nightly the solitary figure of the priest Unputa came out darkly in the flood of light which bathed the headland, and prayed for the coming of the promised salvation. With the head bowed low toward the sheen of moonlight on the water, Unputa prayed in silence. With bowed heads toward the east the feeble remnant of the tribe knelt like black specres upon the white sand far below, waiting to join the mournful worship at last. An outcry startles them. Looking upward, the whole tribe start to their feet, and, crowding forward, gaze steadily in the direction in which their priest's outstretched arms are pointing. Yes, there in the trembling moonlight, where the gleaming water melts into the shining sand, seemingly formed of the prismatic spray which rises in glowing clouds from the foam-tipped rocks, is the white, misty figure of a woman. A lunar rainbow, faint and beautiful, frames the figure which casts no shadows in the moonbeams. Her long hair floats in the waves of silver far behind her; her eyes, large and mournful, light a face pale and ghastly, but exquisitely beautiful; her flowing draperies fade and melt and mingle into the silvery waves beneath her, and her bare arms, ringed to the shoulders with bands of pearl and agate and alabaster, beckon Unputa to follow her—whither? In mournful cadence the waves die among the jagged rocks as the young priest descends in silence the rocky face of the cliff. In silence his people watch him. Fearlessly he crosses the narrow strip of beach toward the white, misty figure. The apparition recedes across the water in the moonlight, still waving its arms and beckoning, and fearlessly Unputa follows. Breathlessly his people watch him as he walks out upon the sea, and sinks not down into the glimmering water. He seems to tread upon a bridge of silver moon-rays. Still the spirit goes, and still Unputa follows, becoming but a faint dark speck against the brilliant distance—then passing from sight into the gateway of the moonlight. Never came Unputa back unto his anxious people, though they watched all night for him. He was the last priest ordained of the Magnes, for with him perished all their prayers and charms and incantations. But on the next day the fisher boats went outward to the sea, and returned at night deep laden, as of old, with luscious booty. In sand and rock and kelp were found once more the juicy shell-fish, and peace and plenty reigned again throughout the land of Laguna."

As I arise from my reclining posture, I gaze down upon the white beach below and half expect to catch another glimpse of the kneeling throng of dusky worshippers.

A Town Where Neither Coal nor Wood Are Wanted.

Not a pound of wood or coal is consumed at Creighton, twenty miles from Pittsburgh, where the Pittsburgh Plate Glass Company have their plant. Glass factory and residences are heated and lighted by natural gas. Gas was struck at 1,200 feet in five inch bore. A torrent of what the owners describe as "pure nitrogen gas" bursts out with a force of 250 pounds to the square inch, and after three years is flowing with as much energy as ever. The visitor sees no coal, no cinders, no ashes, no smoke. In the furnaces is a lurid, steady heat regulated by clock-work. No grimy stoker sweats his life away at furnace doors, but instead, a calm person with a stained-glass shield invites you to look at the glass through the open furnace doors, where glares a heat sufficient to deter a modern Shadrach Meshach and Abednego. Overhead gas-burners are ablaze in broad day because it is not worth while to take time to turn the burners off and on as there is plenty of gas and to spare. In the residences a thumb-screw regulates the temperature to absolute perfection.

There is no public gambling in London. The "club-room" system is extensive, however.

THE CAPITOL DOME.

Brumidi's Designs in Fresco in the Great Belt.

Mr. Edward Clark, the architect of the Capitol, has recently received a letter from Mr. G. M. Dodge, who was the chief engineer of the Union Pacific Railroad during its entire construction, asking whether the intention is to make the picture of this event historically accurate, it having been published that such a picture might be adopted to complete the fresco work in the great belt around the dome of the Capitol. Mr. Clark has replied that the proposed picture is only thought of to complete the space, but has not been decided upon at all. The original cartoons for the work were drawn by Brumidi, and were fifteen in number, the last representing the discovery of gold in California. Brumidi made these cartoons over six years ago, and in beginning his work in encaustic on the wall of the Capitol he actually united the end of the last with the first subject in historical order, so that to the right of the figure of the Goddess of Liberty, which is intended to be the starting point of the great fresco belt, there can now be seen a solitary miner digging in the side of the hill under the shadow of the cactus plant, while to the left, and a few feet only, Columbus is just landing on the shores of San Domingo. By some mistake in circulation the plan as originally approved will not complete the belt. Thirteen of the original cartoons are completed, covering just three fourths of the circle. The remaining ones, the capitulation of the city of Mexico at General Scott's entry and the discovery of gold in California, will occupy less than two thirds of the unadorned space. It is a suggestion only that the completion of the Pacific railroads is an historical event worthy of perpetuation in bas-relief imitation, for it is expected that this work will endure as long as the building itself.

COMPLETED SUBJECTS.

The subjects already completed are the "Landing of Columbus," "Montezuma Receiving Cortes in the Temple of the Sun," "Pizarro Crossing the Isthmus" and "Burial of De Soto." These four complete the events of importance in Spanish colonial history. Our colonial history is illustrated by the "Rescue of John Smith by Pocahontas," "Landing of the Pilgrims," and "Penn's Treaty with the Indians." It was when this last subject was nearly completed that Brumidi died and Costaggini began the task of completing the belt. He has in four years finished the "Penn Treaty," "Beginning of the Settlement of New England," "Governor Ogelthorpe Receiving a Deputation of Indians," "The Battle of Lexington," "Declaration of Independence," "Surrender of Yorktown" and "Battle of the Thames."

The artist received only $10 a day for the execution of tasks that merit an artist's compensation. His contract with the government is that he shall be paid only when he works, and the calculation is a fair one that the remaining portion of the Capitol frescoes will not be finished for several years—not for ten years, anyhow. Mr. Costaggini is well-known in New York, having decorated many of the sanctuaries of the Catholic churches in that city. He painted the full length portrait of Cardinal McCloskey which hangs in the sacristy of the Cathedral. His skill has also been in great demand in the Baltimore churches, and yet it will surprise the majority of Herald readers to learn that it required weeks of patient application for him to obtain the privilege of completing Brumidi's work. For this enduring labor he receives the pay of a first-class whitewasher.

CHARACTER OF THE WORK.

The contrast between the labor of Brumidi and Costaggini is apparent to the very few visitors to the dome of the Capitol. The space on which the cartoon must be put is a little over ten feet high. This seen at a distance of seventy feet gives one the idea that all the figures are dwarfs. The intention was to make them all bas-relief, but Brumidi in his declining years did about as he pleased, and so worked his lights and shades as to make the characters appear in alto relievo. Costaggini who, at the risk of having his work suffer by comparison, has faithfully followed the instructions of the architect of the Capitol and strictly adheres to the bas-relief coloring. The thousands who annually look at this wonderful panorama of American history cannot discover the actual dividing line between Brumidi and Costaggini. It begins with the right of the "Penn Treaty" and includes the group of three Indians, to reproduce which required weeks of the most patient study on Costaggini's part. Visitors naturally exclaim, when the dividing line is pointed out, "How Brumidi's figures actually stand out from the wall!" This is particularly true of Columbus, who looks as if he would tumble on to the floor of the dome if he steps one foot further, while the attitude of the Indian about to kill John Smith and the other characters in this group makes timid people think it is a real tableau. Every cartoon, before it is marked on the wall, is inspected by Architect Clark. The drawing of Brumidi has to be faithfully followed, and this fidelity will make it necessary now to remodel a number of groups already finished.

The difficulty in making bas-relief imitation look reasonably well at so great a height has been fully recognized, but that, nevertheless, does not change the awkwardness of many of the figures. The group about the reader of the Declaration of Independence and the reader himself are to be remodelled. The horse in the Cornwallis group might have been drawn from some old spavined creature let loose on the commons of Washington. With the magnificent bronze equestrian statues of Washington, Scott, McPherson, Greene and many others here, it would hardly seem possible to cast in plaster such a monstrosity as the animal is represented to be in this conspicuous picture. Yet the outlines of the horse are just as they appear in the drawing furnished the artist for his guide.

But the question now is, what shall be the final design to complete the belt? As has already been said, the completion of the Pacific railroads is a suggestion. All that it must be is some event of national importance subsequent to the discovery of gold in California. In conversation with Architect Clark he said he would be glad to have the opinion of others on this matter. One would suppose that the Revolutionary and Mexican wars having representation in the belt, that the scene under the famous apple tree at Appomattox, when Lee surrendered to Grant, would be a very good subject to round the work with. If war pictures are not wanted why not perpetuate the ratification of the fifteenth amendment? There are certainly greater events in the history of the country since California was opened to emigration than the driving of the golden spike at Promontory in 1869. As it will be a year hence before the subject needs to be ready for the artist's hands, the Treaty of Washington may be agreed upon as an event of distinctive importance in our history and worthy of a place among the victories of peace.

The Man With Glass Legs.

"Hallucination!" said Dr. Jenks. "Knew a man once who thought his legs were made of glass. Lived down East. An old, wealthy, dyspeptic bachelor. I think the idea about his legs was the result of dyspepsia, but I was quite a boy at the time. Anyway, the old boy was so afraid of having his legs broken that he cried out when any one approached the bed. There was an old doctor in the vicinity, who was half mad himself, and this old fellow determined to cure him. One day he called and asked the old man to come out for a drive. Of course the old fellow was horrified, but the doctor insisted, and he at last consented to go. A bed was made up in the doctor's conveyance and the dyspeptic carried out and tenderly laid in it. They drove off, and about, until over a hill a little distance off they saw the stage coming.

"Then the doctor, by a dexterous twist of the lines, overturned the buggy and tumbled the old man out into the middle of the road. Of course he cried out that he was done for, but the doctor righted his buggy and drove off, leaving him squirming in the middle of the road, and quite unable to move, owing to his glass legs. Suddenly he was alarmed by a shout, and saw the stage come tearing down the slope, heading straight for him. He gesticulated, but the doctor had fixed it all right with the driver and the stage came right along. Well, the old fellow stood it until the stage was only a few feet away. Then he jumped up and ran—ran clean back to town, and was never bothered with glass legs again."

Genius and Opportunity

For a score of years the scientific school of criticism has tried to break down the barrier between the ordinary minds and men of genius by proving that genius differs in degree but not in kind from common intellects. That this tendency should have grown in favor with critics is not surprising; it is merely an illustration of that larger tendency in modern science to regard all organic beings as related, and to obliterate the line of separation between the lowest men and the highest animals. But after accepting the assertion that men of genius are only ordinary men with some intellectual qualities developed to an unusual degree, how does that make genius any the less remarkable? It is in the difference that the marvel lies, and not in the resemblance. Science will never be able to do more than record that difference; it will never be able to explain it. So when we are told that Shakespeare or Goethe was the product of his time, we need not quarrel with the statement; but we know that no explanation of the fact that Shakespeare was Shakespeare can be given. That particular individuality which distinguished him from all other men, whether they were contemporary or not, cannot be explained by referring to the age or to the environment in which he lived.

"So you think John is becoming a great man in the city!" said a farmer, speaking of his absent son to a companion of the youth.

"Great man! I should say so. Why, there ain't a bar-keeper in the city hardly that he don't call by his first name."—[Somerville Journal.

It is said the sanitary condition of Poulon is so bad that it catches all the infectious diseases going. Up to the hour of going to press, however, it had not caught the base ball fever; and the European papers, therefore, are a little premature in demanding that the town be torn down and rebuilt.—Norristown Herald.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No 221 F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensuing Masonic year as follows:

Saturday.....January 24th
" .....February 28th
" .....March 28th
" .....April 25th
" .....May 23d
" .....June 27th
" .....July 25th
" .....August 22d
" .....September 19th
" .....October 17th
" .....November 21st
" .....December 19th

Members and visiting brethren are cordially invited to attend.

C. Mulholland,

EDITOR & PROPRIETOR.

THE COUNTY GOVERNMENTS BILL.

From Hon. P. Reddy and Hon. R. J. Van Voorhies, we have received copies of Senate bill No. 100 and Assembly bill No. 326. These are bills introduced in their respective houses by the gentlemen named providing for an amendment to the County Governments bill, so far as the same applies to salaries of County Officers. These bills are alike the salaries named to be paid to Inyo county officers with one exception, that of District Attorney. The amounts are as follows:

The County Clerk	$1 600
The Sheriff	4 000
The Recorder	800
The Auditor	200
The Treasurer	1 000
The Tax Collector	1 000
The Assessor	1 200
The District Attorney	1 500

In Inyo county the County Clerk is also Auditor and Recorder; the joint salaries therefore would amount to two thousand six hundred dollars per annum. The Sheriff is also Tax Collector, and his joint salary would be five thousand dollars per annum. These are the salaries as fixed by the bill of Mr. Van Voorhies. As stated above, the bill of Mr. Reddy differs from this in fixing the salary of District Attorney at nine hundred dollars per annum. Both bills provide for abolishing salary for the office of Coroner and Public Administrator and returning to the payment of fees. Both also provide for abolishing fixed salaries to Supervisors, and instead thereof, paying six dollars per day for each day employed in the discharge of duties of their office, together with mileage at the rate of thirty cents per mile in going only from their residences to the county seat at each session of the Board. The population of Mono county, as returned in the last census, is more than double that of Inyo county. The assured valuation of property in each county is about in the same proportion. Both of these bills fix the same amount for salaries of county officers in each of these counties, with the single exception of District Attorney. In other words each person in Inyo, or each dollar of property, would, under either of these bills, be subject to double the amount for salaries of officers, that would rest upon persons or property in Mono county. There is good reason to believe, however, that most of the changes proposed by these bills would be satisfactory to the people of Inyo county. We have now to hope that our Representatives in the Legislature will take care to have one or other of the bills kept up on the file: the session is already far advanced, and should they act like a baulky team, instead of pulling together, both bills will drag behind till the Legislature adjours, and neither will become a law.

ON THE collection of poll-tax in San Francisco the *Daily Report* says: "The Tax Collector had control of the poll tax for ten years. In the last year he received a total of $33,500. In 1872 it was restored to the Assessor; and in the first year he collected $58,000. Now the annual collection is $80,000; every cent of which, minus only one-half of one per cent., goes into the School Found." It is the general opinion that it would be much better to houe poll-tax collected by the Assessors in every county in the State.

WHEN half the constitutional time of the session of the Legislature had passed, which was on Wednesday of last week, the only bill which had become a law was one to pay a colored man named Wilkins five hundred dollars for a horse that had been killed by falling through a hole in a wharf in San Francisco. With the above sum added to the expenses of the Legislature up till that date the horse would cost the State about seventy thousand dollars. It would hardly be fair, however, to charge all the expense to the horse bill, as many other bills were introduced, some of which may become laws.

AT Eureka, Humbolt county, California, last Saturday, during a riot between Chinese a stray bullet killed David Kendall, a member of the City Council, and another severely wounded a boy. The news created such intense excitement that a mass meeting was called. Over 1,000 citizens responded, and resolutions of indignation at the lawless acts of the Chinese were adopted and a committee appointed to notify the Chinese that they must all leave the city. Groups of citizens visited each Chinese house and compelled them to pack up their effects, and them marched them to a large warehouse, where they were imprisoned awaiting the departure of a steamer for San Frsncisco. A second mass meeting, attended by over 2,000, was held next day. The Standing Committee appointed was empowered to prevent any Chinese locating in the city in the future.

A GOOD idea is that of giving Boards of Supervisors power to fix rates for cost of water for irrigation. The bill introduced in the Legislature to make this the law appears to be a good measure.

A BILL has been introduced into the Nevada Legislature for the organization of a State Mining Bureau, and calling for an appropriation of $1,000 for that purpose. The sum named is ridiculously small for such an institution.

DURING the past few days many tax payers of the county have said they do not want such reduction of the salary of the District Attorney as providod for in the Senate bill No 100. It is clearly the wish of the tax payers to pay such salary as will secure to the county the services of a competent Attorney; this cannot be had for nine hundred dollars, the figure named in the bill.

SENATOR Reddy has introduced a bill in the Legislature for the better protection of miners. "The bill makes it unlawful for any mining corporation to sink the shafts below 300 feet without a second mode of egress from such mine shaft or tunnel, to connect with the main shaft at a depth of not less than 100 feet from the surface When the company fails to provide the mode of egress, and any accident occurs to any miner, the owners are made liable for all damages which may be caused by the accident, It is also made unlawful for any company where there is no second mode of egress, and where steam hoisting works are used, to leave the hoisting works in charge of but one person.

DESCRIPTIONS in English papers of the excitement that prevailed in that country when the news was received of the fall of Khartoum, remind one very much of the descriptions given by those same papers of the excitement throughout the northern States after the first battle of Bull Run. Evidently a profound anxiety exists, and appearances of something very like panic are not wanting. This is sure to be quickly followed by an unflinching determination to maintain the national honor, and end with victory at any cost. Once the spirit of the nation is fairly aroused, English blood and English money will be poured out as freely as water. English reports of events in the early days of the rebellion were not wanting in expressions of exultation at the misfortunes of the Union army, nor of confident predictions that the United States Government was hopelessly wrecked. No word of exultation now appears In any American newspaper at difficulties encountered by the English armies in Africa. On the contrary, the general expression of opinion is that those armies are fighting the battles of civilization, and wishes are given for their success. What a strange spectacle is presented by the attitude of the Irish nation toward England, while the gallant Irish soldiers are among her bravest and foremost in fields of battle, and the chief hope of victory for English armies rests on the skill and courage of the Irishman, Garnet Wolseley.

Parker, viz: Printing presses and materials of the Inyo Independent, created by mortgage to secure a debt given by James E. Parker to E Robinson et al, dated October 22 1881, and recorded in book "A" of chattel mortgage, page 118, value $700 41 95

Public Notice

Is hereby given that unless the above taxes and costs are paid I will on

Monday the 23rd Day of February, 1885,

Between the hours of 9 o'clock A. M. and 4 o'clock P M., to wit, at the hour of 10 o'clock A M., commence to sell the above described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day according to adjournments until the whole real property above described, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 26th day of January, A. D. 1885.

JOHN S. McGEE,

Sheriff and Ex-Officio Tax-Collector, Inyo County, California.

By J J. MOOR, Deputy.

INSOLVENT NOTICE.

In the Superior Court, County of Inyo, State of California.

IN THE MATTER OF JOHN CLARKE AN INSOLVENT DEBTOR.

JOHN CLARKE HAVING FILED IN THIS Court his petition schedule and inventory in insolvency, by which it appears that he is an insolvent debtor, the said John Clarke is hereby declared to be insolvent. The sheriff of the county of Inyo is hereby directed to take possession of all the estate, real and personal, of the said John Clarke, debtor, except such as may be by law exempt from execution, and of all his deeds vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate All persons are forbidden to pay any debts to the said Insolvent, or to deliver any property belonging to him, or to any person, firm or corporation in association for his use The said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court except as herein ordered It is further ordered that all creditors of said debtor be and appear before the Hon. John A Hannah, Judge of the Superior Court, of the county of Inyo, in open Court, at the Court-room of said Court, in the County of Inyo, on the fourteenth day of February, 1885, at ten o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor

It is further ordered, that the order be published in the INYO INDEPENDENT, a newspaper of general circulation, published in the County of Inyo as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that, in the mean time, all proceedings against said insolvent be stayed

JOHN A HANNAH,

[SEAL] Superior Judge

Attest, THOMAS CROUGH, Clerk

Dated, January 2, 1885.

STATE OF CALIFORNIA, } ss
County of Inyo, }

I THOMAS CROUGH, County Clerk of the county of Inyo, State of California and Clerk of the Superior Court do hereby certify that the foregoing order of Adjudication is true and correct as the same remains in this office.

IN WITNESS WHEREOF I have hereunto set my hand and affixed the seal of the Superior Court at my office in the county of Inyo this 21 day of January 1885.

(SEAL)

THOMAS CROUGH, Clerk,

By ALEXANDER CLARK, Deputy Clerk.

FINAL HOMESTEAD PROOF.

No 451.

LAND OFFICE AT BODIE, CAL., Dec. 27 1884.

NOTICE IS HEREBY GIVEN THAT THE following-named settler has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Honorable Superior Judge of Inyo County, California, or in his absence before the Clerk of said Court, at his office, at Independence, California, on TUESDAY, February 17, 1885 viz: R H. Blake, for the E ½ of N W ¼ & W ½ of N E ¼ sec. 21. Tp. 9 S R 34 E. M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: E H. Blake, S. J. McMurry, P. W. McMurry and J. J. Stevens, of Big Pine.

D. WALKER, Register

LEGAL——

——BLANKS

AT THE

"INDEPENDENT" OFFICE.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, FEBRUARY 14,.....1885.

—James L. Greely, a former resident of Bridgeport, Mono county, died suddenly at Eureka, Humdoldt county, on January 29th.

—It is reported that a ledge of lead ore in a mine near Winnemucca has been found to carry about forty dollars per ton in gold.

—A number of the young people around Independence intend going to the celebration of Washington's birthday, at Keeler.

—At Wood River, Idaho, miners are out on a strike against a proposed reduction of wages from four dollars to three and a half dollars per day.

—The delinquent tax list of Fresno county makes thirty one and a half colums of matter in the Fresno *Expositor* Evidently coin was scarce in Fresno about tax paying time.

—The stanzas entitled "My Native River," published in this issue, are well worth preservatien in print. Contributions from the venerable authoress of the poem will always be welcome to the columns of the INDEPENDENT.

—At Tuscarora, Nevada, miners have received notice that wages must be reduced from four dollars to three dollars per day. The minars will not stand the reduction, and already a large number have been discharged, only those doing contract mrrk being retained.

—The report of Superintendent Frank Fitzgerald, of operations at the works of the Modoc Mining Company, makes a very favorable showing. By good management Frank has now got the mines in such condition as promises to enable him to make frequent reports equally as good as that given on another column.

—Last Sunday morning, about three o'clock, a woman named Rhoda Ann Strong was murdered in Reno. The woman went from Battle Mountain to Reno some months ago; her husband arrived in Reno on Friday of last week. The two were staying together the night of the murder and he is accused of the crime. She was aged 25 years and he 64.

REPORTED SALE.—It is reported that a mine in Deep Spring Valley has been sold to George Storey. The price named is $10,000.

DISMISSED.—The case of E. Marks, of Bodie, charged with complicity in a shooting affray, was called in the Superior Court last Monday. The charge was dismissed.

VALENTINE PARTY.—This evening the young people of Independence will give a valentine party at Mairs hall, a good orchestra will give music, and there is sure to be a pleasent time.

DAILY YIELD INCREASING.—The daily average of ore taken from the Yellow Jacket, Crown Point and Belcher is largely on the increase. These three mines are now producing over 500 tons of ore per day. A train of 70 cars loaded with ore from the above three mines leaves Gold Hill every day for the mills on the Carson river.—*Virginia Chronicle.*

NOT A GOOD COUNTRY.—A Comstock miner, who went to New Mexico "to better himself," writes that the country is overrun with idle men, many of whom are honestly looking for work, but the greater portion are professional vags—the lowest of bummers and meanest of tramps. He says the wreck of the Comstock is better to tie to than the whole of New Mexico.—*Enterprise.*

PRICE OF PRODUCE.—In a communication from Knapp & Laws, Hawthorne they say: "Owing to a recent fall in prices of meats we will pay:

For choice light bacon, 11 cents per ℔
Fresh lard, small cans, 11½ cts. per ℔
For sugar cured hams, 12 cents per ℔
Eggs, per dozen, 27½ cents. Half cash half trade. Goods to be delivered at C. & C. Railroad Station, Alvord, Independence and Lone Pine.

WITHOUT MONEY OR PRICE.—At a cost of a good deal of money and labor, Frank Lawrence has built a flume to carry water to the mouth of Mazourka canyon, at the foot of the Inyo mountains, above Independence Station. This now makes a much needed watering place, and the water is intended for the use of all, without money or price, Mr. Lawrence only requesting that parties will not wantonly destroy the flume and trough. This very reasonable request will surely be complied with.

ONE OF THE VICTIMS.—The Treasurer of Mono county is one of the victims of young January, who stole money from the State Treasury. The Bodie *Free Press* says. "The Treasurer of Mono county, Z. B. Tinkum, who owed the State $7,327.08, walked into the office of the State Treasurer last week, laid down $6,330.15 and a certificate of special deposit, signed by the late State Treasurer, for $996.93, which made the amount due. The certificate was declined, as January stole the money. Treasurer Tinkum then paid the full sum.

SELLING LIQUOR TO INDIANS.—Last Monday Mrs. Kitchen and Alfred Walker were arrested at Independence, charged with selling whisky to the Indians. The accused were brought before C. Mulholland, Justice of the Peace and each answered "not guilty" when asked to plead the charge. Both of the accused waived their right to a Jury trial, and agreed to be tried by the Court. The charge against each was clearly proved, and the Court imposed a penalty of thirty five dollars upon each, or to remain in jail till the fine shall be satisfied, at the rate of one day,s confinement for each dollar of the fine

MY NATIVE RIVER.

Forty years, my blue Niagara,
Forty years have come and gone,
Since your wave lips kissed my naked feet
In youth's delicious dawn.

Thorn torn and scarred and roughened,
On life's tangled, rocky way;
They press once more your wave washed sand;
Waves, wash their stains away.

And, Mother River, let me lave,
My tear-stained face again,
And with your cooling drops relieve,
My white head's burning pain.

Your shore my childhood's play-ground was,
Your side my childhood's home,
Where with Majestic, ceaseless glide,
From noble lakes you come.

Dear, changeless friend, the only one
I find to greet me now;
They're gone, the loved ones all are gone,
I but a withered bough.

Constant forever, we must part,
My river broad and blue;
Type of a grandly useful life,
Loved, whispering waves, adieu!

S E MCAFEE.

Mining Items,

MODOCK CON. MINING COMPANY.

Mr. Frank Fitzgerald, Superintendent of the mines at Darwin, has just made the following report of operations to the Secretary of the Modock Mining Company: Have shut down furnace for want of coal. Five days run produced 62,718 pounds of bullion, value as follows, viz: Silver, ounces per ton 16.6; gold, per ton, $39.68; total value of bullion, $10,954.96. Will take some time to get bullion to the railroad as teams are scarce. Resumed sinking in the South Lookout mine, average width of ledge at bottom of winze, three feet; the ore contains 36 per cent. lead, 69 ounces silver and $12 gold per ton.

BROWN MONSTER.

A lot of ore was shipped this week from the Brown Monster mine to Selby & Co., San Francisco.

Personal Mention.

W. J. Murphy came up from Darwin last Tuesday and stayed in town most of the week.

Judge Wayland, of Bishop Creek, is here on a visit with his daughter, Mrs. Brown.

Fred Burckhardt has his watchmaker's bench set up in the Blaney House; he will be in Independence all of next week.

Charles Levy, late of Lone Pine, has moved to Mojave, and is now in business there. We regret to lose Charlie from Inyo county, but wish him very great success in his new home. His advertisement on another column will direct the traveler where to go in that thirsty land.

INSTALLATION.—Last Saturday evening the following were installed officers of Lodge No 546 I. O. G. T.: Chief Templar, G. H. Hardy; Vice Templar, Luella Shepherd; Treas: Mrs. Hardy; Sec: I. Mulhollard; F. Sec; Mrs. Julia Crough; M. Harry Cook; I. G., H. Hamilton; O. G., John Lewis. A number of guests were invited, and after the ceremonies the company were treated to a fine supper. Short speeches, music, songs, recitations and readings all contributed to make a very pleasant evening. The Lodge is in a prosperous condition, and is a valuable aid to the cause of morality and the good of society.

SONORA STAGE ROBBED.—The Sonora stage was robbed last week, four miles east of Copperopolis, near where it has been stopped a dozen or more times before. The stage left Sonora with four passengers inside and the Superintendent of the line, Keough, on the seat with the driver, Billy Hodge. The passengers were a man named Whitney, a yound man named Eli Shaw, son of Dr. Shaw of Sonora, a Mexican and a Chinaman. The robbers did not attempt to take anything from the passengers, but contented themselves with breaking open the coin box of Wells, Fargo and Co, and taking therefrom $1800. Detectives are on the track of the robbers.

VALUABLE SEEDLING.—Last Fall Mr. S. A. Densmore at Camp Independence gathered a crop of apples from a seedling tree. This promises to be a valuable variety. The apples are large and showy, they are of fine flavor, and at this time are sound and plump as when gathered, proving to be first class keepers. Being native here, this tree and its produce may prove better suited to our soil and climate than any yet tried. Mr. Dessmore also made wine from peaches, by a process never before known here. The wine has a flavor much like champaign, but is a far more potent liquor, and a much smaller quanity of this would floor the most seasoned toper.

TOO MANY PEOPLE.—The revival of active operations in Candelaria and Belleville has been greatly exaggerated in the minds of those who are idle and living away from both places. The result is that both town are full of idle men—it amounts to three and four men when there is employment but for one. In many cases these people have reached their destination without means and are now recipients of charity. This bears hard on those who have weathered the many dull days of the past year, those who have had to cut corners on expenses and who even now, though employed, are obliged to be very economical to pay up their past indebtedness In consideration of the chances of obtaining work being very limited, and the accomodations equally so, it is hoped that those who contemplate visiting either place in search of work will stay away—it is not here for you.—*True Fissure.*

SUPERVISORS' PROCEEDINGS.

Monday, February 2, 1885.

Board met at 10 o'clock. Present, J. D. Harger, George Stevens, J. D. Blair, Thomas Boland and Jno. C. Eddy.

SATURDAY, FEBRUARY 14,.....1885.

Humor of the Day.

Dog-will" is the new color. It runs to "Purp-'ll."

A fellon on the finger is worse than two in jail.

Rich men are "borne to the skies on flowery beds of V's."

A grave yard—thirty-six inches of black crape.

A good many marriages come out of a tennis court.

Folks who live by their wits live by the want of wits in other folks.

"Why, is languor like our clothes? Because it is ennui."

A young man must have an aim in life before he can make a hit.

The raisin in a boarding house pudding is as oasis in the dessert.

The original barber-queue—The pig-tail of a Chinese tonsorial artist.

Women may not be deep thinkers, but they are generally clothes observers.

The truly good can enter places where the devil would blush to be seen.

At church women are more apt to consider the texture than the text.

"I don't know about your religious novels," said Deacon Brown smith: "the Bible is good enough for me."

"All I want is my hone," as the barber remarked when he grabbed it from his mate.

It is enough to take away your breath to hear of a California onion weighing nearly two pounds.

An exchange has a poem "On the Birth of Twins" and didn't know enough to make the rhyme a couplet.

It makes a young man feel rather cheap to hear his sweetheart singing, as he approaches the house, "Nobody Loves Me."

A Springfield oysterman has a featherless chicken. It is three months old. It is said that the chicken, although so young, can't be drowned.

"Aren't you in a good deal of a hurry about getting your storm doors up?" 'Not an hour too soon. My wife's mother will arrive at noon.

Wit on the brain of a fool, beauty on the face of a simpleton and a razor in the grasp of an infant will always amuse the sinuous creature that once peddled apples in Eden.

"Mamma," said little Mable on a rainy day, "you said it was wicked to waste water, didn't you?"

"Yes, my dear."

"Then why don't God be more careful?"

A young man once went to Vicksburg, Miss., and announced that he was going to publish a "lively, spicy paper, devoted to local affairs." Next day several one-armed, one-legged and one-eyed gentlemen called on him and advised him not to do it, because they had tried it, and it didn't seem to suit the people of those parts. Some people have no idea of true humor.

"For heaven's sake, what are you doing, Mr. Schneidervrow?" exclaimed the leader of the orchestra to the second violin; "you're not keeping time at all; count the beats, man, count the beats." Mr. Schneidervrow dropped his bow, looked over the audience of deadheads and exclaimed in despair, "It vas impossible!" He had misapprehended the leader's meaning.

A Shock to Her Vanity.

Dressed for church she stood before the mirror admiring herself, and mentally observed that she never had appeared more lovely. The candid critic, however, would have declared that her figure was not in just proportion, for she was very tall and thin, and her height seemed greater than it actually was in consequence of a bunch of ostrich plumes that floated in snowy masses over her hat. "Yes, I know I am handsome," she said, "but I can't help it;" and turning to go out, caught sight of her little brother standing in the doorway. "What are you doing there, Bob?" she asked sharply. "Looking at you, Fannie," replied the artless child. "What do you want to be staring at me for?" "'Cause you look just like a long handled duster." And sitting all alone in church that morning she wondered how she would feel if Bob got the measles and died.

The feud existing between Lord and Lady Lytton did not end with their separation. She published a novel that was a libellous satire upon him. His election day at Hertford she drove up in a chaise, mounted the hustings after him and poured forth a torrent of invective against him to the assembled crowd. The incident gave occasion to a squib, ascribed, probably unjustly to their son, "Owen Meredith," the present Lord Lytton and ex-viceroy of India, of which one stanza was:

"Who came to Hertford in a chaise
And uttered anything but praise
About the author of my days?
My mother."

"Now," said a gentleman to a negro he had just employed, "I want you to come early every morning. I propose to pay you well, and I want you to work." "Wants me ter work, yer say?" "Of course I do." "Dat let's me out, den. I don't 'ject ter de pay, an' I'd jes' as soon hire out, but I doan wanter work. Good day sah."

There are not more than two or three women whose wealth is greater than Queen Victoria's.

Seventy-five fires have been caused in New York city, during twelve years, by rats nibbling matches.

NEW DRESS REFORM.

Germans Now Wearing Woolen Clothing Only.

The doctrine starts with the fundamental principle that, being animals, we ahould wear animal clothing. The absorption by vegetable life of poisonous emanations from animal life is a process not limited, it would appear, to living plants, but continued by vegetable fibre, such as cotton, linen, etc., with the difference that, while the living plant assimilates these emanations, the dead fibre cannot do so, but exhales them again when wetted or warmed. Thus our clothes, in consequence of their vegetable character, attract and retain those noxious principles which should on the contrary be thrown off with the greatest possible promptitude. On the other hand, animal material, such as wool, is made by nature to protect animal life, and will not prevent, but assist the evaporation of the emanations coming from the body. This can readily be proved by the sense of smell. It suffices to wear clothes of pure wool throughout, and there is at once an end to the unpleasantness noticed in the linen underclothing, the cotton linings of the coat, etc. From these facts Dr. Gustav Jaeger, Professor of Zoology and Physiology, at Stuttgart, deduces his medical theory, which has won innumerable disciples in an incredibly short time.

Dr. Jaeger points out that the human body is most susceptible to disease when it contains too large a quantity of water or of fat. The presence in excess of these substances can be tested by the specific weight and the rapidity of the nervous action. But the specific weight must be given in proportion with the cubic measurement of the person, and this latter is not easy to ascertain. By the immersion of the body in a measured tank we have a rough-and-ready method of gauging its cubic capacity, which must correspond with the displacement of the water. Dr. Jaeger, however, has constructed an air-tight chamber where a column of mercury records the amount of compression brought to bear upon the air by the introduction of a foreign body or person.

Out of 65 men thus measured Dr. Jaeger found that the litre weight varied from 764 to 1,069 grammes, a difference of almost 40 per cent. To test the nervous activity a stop-watch is employed which can record the two-thousandth part of a second. The operator sets the index hand in motion, which has then to be immediately stopped by the person undergoing the test. The difference between the two readings records the time needed for the excitation, produced by the sight of the moving handle, to run its course through the eye, the optic nerves, the brain, the nerves of the arm, and finally to reach the muscles which actuate the finger that stops the watch. Experiments conducted in this manner showed in one instance that the rapidity of action after a Turkish bath increased to the extent of 19 per cent.

What is known as Dr. Jaeger's sanitary woolen clothing is so contrived as to obviate these evils. The clothing consists, for men, of tight-fitting stockingette undergarments made of pure undyed wool, fastened over the shoulder, and of double thickness over the breast. The coat or jacket is double-breasted, buttoned well up to the throat, contains no lining nor padding unless of pure wool, and is either undyed or treated only with uninjurious fast dyes. The same rule applies to the trousers, while the waistcoat is either dispensed with altogether, or inner flap affixed to the side of the coat. Inside the sleeves and the trousers legs there is a contrivance, which, fastening tight round the limb, prevents up-draughts; for cold, rheumatism, lumbago, etc., are caught by the sudden rush of cold air to one particular part of the body, and not by the gradual cooling of the entire system. The feet are clad in pure woolen socks with divisions for each toe, while the upper part of the boot is made of felt, the lower part also of felt or of porous leather, and the inner soles consist of perforated leather and layers of felt. Thus the boot is thoroughly porous, and the feet are consequently kept as clean as the hands.

By doubly protecting the front of the body, where the blood vessels converge, these are stimulated; and, as an even temperature throughout is maintained, the necessity for great coats is obviated, rain or damp having little or no effect, for in every case gradual and even evaporation is insured. While they are the best protection against cold, these clothes are also the coolest in summer. Little or no change need be made between winter and summer, at least in the temperate region; and means have been found by which this system can with equal facility be adopted by women. Nor can a "woolenite" be easily distinguished from a "woodenite," as the wearer of vegetable fibre may be called. The substitution of a collar made of unstarched white cashmere for the customary starched linen collar is the most conspicuous feature in the dress; otherwise it would be difficult to detect the disciples of this system. The cashmere collar, however, is not only most comfortable, but is a preventitive of throat disorders.

All these precautions taken during the day must be continued at night. The bed must also be free from vegetable fibre. The linen sheet must be replaced by woolen blankets or camel-hair rugs, with white cashmere sheets, if preferred. The mattress and the pillow should also be stuffed and covered with wool; but when thus protected the sleeper need fear neither cold nor change of temperature, and is, therefore, urged to keep his window well open at night. Indeed, the possibility of thus securing pure air in the bedroom without risk is one of the most important advantages of the system. In reward for this great change in the mode of living the action of the skin is so stimulated that the noxious principles, the "bad humors" our forefathers so often spoke about, are soon given off and evaporated. Corpulence is reduced, the flesh becomes firm and thoroughly hardened, while the acceleration of nervous action and a general improvement in the physical and mental working powers is demonstrated by the stop-watch test. Then, according to Dr. Jaeger, the body has resumed its "normal condition.

Such briefly is the reform in clothing approved and carried out by thousands of Germans, not a few Russians, and some Englishmen, and which has been introduced in our midst at the South Kensington Internotional Health Exhibition and by the opening of a depot in Fore street, where articles of every description in connection with the system are to be seen.

A Fighting Parson in Texas.

Texas still has some pioneer preachers. The San Angela Standard reports briefly a sermon delivered last Sunday in that place by Andrew Jackson Porter, the fighting parson. Among other things, he said: "I have preached out here on the frontier the past sixteen years, and I have lived and supported a large family. I must say, though, I got most of my support from the cow boys. Years ago, where the town of Uvalde now stands, I have skipped from thicker to thicker in my endeavors to escape from the leaden bullets that were flying around in order to reach a little old log school house where I could preach to a few women and children. Now, look at Uvalde to-day, with its fine churches whose spires point heavenward.

"I went to Fort Clark to preach years ago, and started in without a church member, and at the end of twelve months I quit without a member. I thought that was the hardest place I had ever struck. One day just after the boys had been paid off I was walking up the street and noticed a lot of soldiers and gamblers collected in front of a saloon. As I was passing one of them hollered: 'Hullo, parson!' I went across and they asked me to preach, saying that this was the biggest crowd I'd ever had an opportunity to talk to in Brackett. I said: 'Gentlemen, preaching is my business, but I always make it a rule before beginning to take up a collection. Fifty cents is the regular donation.' Taking off my hat, I started around. All that I presented the hat to threw in fifty cents until I came to a young gambler. He looked at the hat, shook his head, saying, 'Parson, I'd like to chip in, but I'm busted.' I got more money in that place than any I have been in.

"Holding services at a place one time I took up a collection for the support of missions. There was a poor old lady present who I noticed droped a $5 gold piece in the hat. I knew she was very peor and not able to afford much, and thought that she had intended to throw in a quarter, but made a mistake. So next day I met her husband and said to him: 'Look here your wife put a $5 gold piece in the hat yesterday. I think she must have made a mistake.' No, no,' he replied, 'my wife didn't make no mistake. She don't fling often, but let me tell you when she flings she flings."

Humane, though bloated bondholders: Passenger—"How long have you been employed on the street cars?" Driver—"Fifteen year—barrin whin I was sick." Passenger—"You must be a great favorite with the company." Driver—"Ha! ha! ha! D'ye see that owld gray mare I'm dhrivin'? Well, we both fell sick together at wanst last winter. They sint for a docther for the horse an' they sint me me resignation.

Callow youth (before looking-glass, stroking chin)—"Sis, I think I must get me a razor."

Sister—"Do, Bob; a beard-raiser."

NOT THROUGH WEAKNESS

But Because the Uncorked Deamon Was so Strong.

Colonel Thomas Gadlayer, prominent before the country as an able supporter of the prohibition ticket, has been for years a dyspeptic. The hard work of the campaign, and his forced irregularity of eating, aggravated the disease at such an extent that his friends seriously feared that his health had been hopelessly broken. Several days ago, a physician in whom the colonel has great faith, was called.

"Colonel," said he, "dyspepsia is an extremely difficult disease to handle, and even if done so successfully, the progress of the cure is almost imperceptibly slow. It mainly depends upon diet. Little help can be expected from medicine. Follow my advice, now, and I assure you that much benefit will be the result. Get you a quart of first rate apple brandy, and take a tablespoonful immediately after each meal. This is an old remedy, and one when correctly followed, has never failed."

"But, my dear doctor, I am a temperance man. I have scorned the use of alcohol as a medicine, believing that there are other remedies just as potent."

"All right. If you allow fanaticism to stand in the way of your health, I have nothing more to say. Take my medicine and abuse it and it becomes a great evil."

"I never drank a drop of liquor in my life, doctor."

"No matter. It will know how to act. The influence of brandy is not a matter of education, colonel. A man may be seventy-five years old, and may never have taken a drop, yet let him get drunk and he goes through the performance just as well as an old actor."

"My goodness, doctor, you do not advise me to get drunk, I hope?"

"Of course not. I advise you to remain strictly sober. I only mention the fact of drunkenness to assure you that the brandy will know how to act. It will not be surprised when you swallow it, but will go quietly to work."

"And you think that brandy will cure me?"

"Taken as I direct, yes."

"The Lord knows I have suffered enough. When you go by the drug store I wish you would tell 'em to send me up a quart."

The brandy came just before dinner. Immediately after the meal, Mrs. Gadlayer went down town on business, and the colonel went into the library, took a spoonful of brandy and lay down on a sofa.

"I must acknowledge that I feel better," he mused. "No doubt it is a great medicine if properly handled." He arose and stood with one elbow on the mantlepiece. "How I have suffered with this terrible disease. I'll take another spoonful." He measured another spoonful. "Ah, nah—voo—the vile stuff! What's the use of talking this way? I act as though I am afraid some terrible calamity will happen if I am found in its presence. I haven't felt so well in many a day. Medicine? Well, yes." Here he turned up the bottle, and, as the boys would term it, took a pretty stiff drink. He walked out in the garden and began a conversation with an old negro who stood by the fence. He was pleased to see that his irritability of temper had left him, and that instead of being nervous and easily startled, he laughed when the dog ran against him. He went into the house and took another drink. Then he sat down and read a newspaper. He laughed at a humorous article, lost his place, began reading the cotton market report but continued to laugh. Pretty soon he took another drink, leaned on the mantlepiece, crossed his legs and mused: "If I ain't cured already, satan's a hog. The days of miracles are not yet over. What! miracles over? Well, I should say not." He took another drink. "A man who says that miracles are over is of the short horn stock. Miracles over! Who ever heard of the like?" He went to the window. "Say, there!" he called to the man on a wagon, "what'll you take for that load of wood?"

"Whoa. Whut you say?"

"What'll you take for that load of wood?"

"This ain't wood. It's hay."

"That's all right. How's the folks?"

"Git up!" lashing his horses.

"Won't you stop and have a drink?"

"Whoa."

The farmer came in and took a drink. The colonel took one.

"Sit down," said the host.

"No, I ain't got time."

"Well, have another drink?"

"I'll jine you."

The farmer and the colonel drank. The colonel laughed, and the farmer, drawing the sleeve of his jeans coat across his mouth, grinned.

"My Lor', thar goes my team!" shouted the countryman, rushing from the room. "Whoa, thar, whoa!"

"I'll help you!" generously exclaimed the colonel. They rushed through the street, yelling whoa. The colonel thought he saw a mudhole away down the street, but before he could check his wild career, he ran into it. When he came out he was reeking with ooze. During his absence his wife returned. While he was fumbling with the gate latch, she came to the door and said:

"Go on away from here. We haven't anything for you."

"Julie, don't you know me?"

"My Lord 'o heavens? What on earth is the matter?"

"Nothin' matter on earth. Trouble is down in the earth. Got a case knife about you?"

"You good for nothing wretch, you got drunk on that brandy. You ought to be ashamed of yourself to be so weak."

"Wasn't 'cause I was so weak, leve; 'cause brandy was so strong. Whoop! bring in the returns."

* * * * * * *

Local item in daily paper: "Owing to a severe attack of dyspepsia, Colonel Thomas Gadlayer, the great temperance orator, will not speak at the opera-house to-night."

By One Majority.

We were about three miles from Natchez, when we heard a great shouting and wailing in a negro's cabin by the roadside; and it was decided to dismount and go in. It was a tumble-down structure with but a single room, and into this was crowded sixteen or eighteen colored people, mostly of the female sex. On a heap of straw on the clay floor was a sick woman. She was rolling her eyes and writhing as if suffering great pain. When asked what ailed her an old white-headed negro, who was called "Doctor" by the others, replied:

"Dat's jist what we doan' agree on. Some says it's de bilyus colic, an' some says it's de gallopin' consumpshun."

"Why, man, something ought to be done for her right away."

"'Zactly, sah—'zactly, an' Ize de detetah dat would like to take hold of de case."

"But why don't you?"

"Kase Ize boxed up, sah. I nebber gin de same medicine fur gallopin' consumpshun dat I do fur bilyus colic, an' until we kin decide on de ailment I doan' dare go ahead."

We were on our horses and ready to move off when the old man came out with a happier look on his face and said:

"Gen'len, we has sorter took a vote on it, an' we has declar'd it rheumatism by one majority. Ize gwineight at it to heat de bricks an' gin her an all-night sweat."

Teacup Fortune Telling.

I have a friend who is quite renowned for her success as a fortune teller through her skill in shaking and tapping a teacup until the grounds or tea leaves in the bottom of the teacup assume in a rude way certain shapes or forms representing people, animals and various other images which she professes to understand as referring in some way to the person whose fortune she happens to be telling at the time. I was present once when she told the fortune of a young lady. The prophecy and the method of making it seemed to me to be very vague; but the gist of it all was that in a short time a young gentleman of extremely prepossessing appearance would arrive, and that he was, in some unexplained way, to exert a powerful influence on the future prospects of the young lady. Wishing to discover what was in the cup to warrant such a forecast, I obtained possession of it without being observed. In the bottom of the cup I saw that the leaves had assumed a form which, with a little aid of the imagination, might be accepted as resembling a very spare, delicate and altogether debilitated young man. With the aid of a teaspoon, and using a few other grounds or leaves that were lying on the bottom of the cup, I quickly changed the young man into a disreputable-looking old tramp, with a big bundle on his back, and accompanied by a ferocious looking buldog. Then I awaited the result. Presently the young lady whose fortune had been told took up the cup, with a blush of pleasure, to examine its contents. The moment she saw the dreadful figure of the old tramp she exclamed. "What a horrid old fright!" Then there was a great commotion, which was only quelled when I acknowledged my guilt. But I had learned something, which was that with a little management and a teaspoon pictures of any kind could be made in a tea cup.

A blue-eyed girl went into the music-store and said: "Have you any easy Boston-Providence pieces for beginners?" "What are Boston-Providence pieces?" asked the astounded clerk. "Pieces without any runs in them," explained the blue-eyed girl, sweetly. The clerk gasped, and then handed down a piece in nine sharps, the score of which included two bases, and was full of short stops. He said he thought that would catcher, as it was pitched pretty low.

It was the second week of their honeymoon. She floated over to the piano, raised the cover, and softly swept her fingers over the keys. Gently, but firmly, he withdrew the lily hand from the ivories, and shutting down the cover, said: "Darling, let this holy time be one of unalloyed happiness."

British red-deer venison has almost no commercial value. It is used at the home table in the Highlands, or given away in presents; and when, in October, the hinds are shot off the land, their flesh is distributed among the keepers, gillies and other servants of the estate.

Pride is a vice, which pride itself inclines every man to find in others, and to overlook in himself.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No 221 F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensiung Masonic year as follows:

Saturday	January 24th
"	February 28th
"	March 28th
"	April 25th
"	May 23d
"	June 27th
"	July 25th
"	August 22d
"	September 19th
"	October 17th
"	November 21st
"	December 19th

Members and visiting brethren are cordiall invited to attend.

SATURDAY, FEBRUARY 21, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

MRS. WILSON, the vile harridan who sold white female children to Chinese in San Francisco, was sentenced to six months imprisonment in the House of Correction, and to pay a fine of $500. This is the greatest penalty the law allowed for the offense. For forgery imprisonment for half a life time may be inflicted, and that is a crime that may be considered almost venial compared with selling girl babies to Chinese

A BILL has been introduced in the Legislature of Nevada, that provides for the publication of the assessment roll of each county. If such publication were made in each county in California, it would be a remedy for the injustice so bitterly complained of by poor men, who pay a far higher rate of taxation than rich men pay, because the property of the rich is not assessed at its full cash value. Publication would compel Assessors to deal impartially with the property of the rich and the poor, as any deviation from this just rule would at once be detected.

LAST Monday Judge Sullivan rendered a decision on the question of alimony and councel fees in the Sharon divorce case. The Judge said; "In view of the plaintiff's present surroundings and difficulties, I think an allowance of $2,500 per month is a reasonable allowance. This allowance shall take effect at the date of this application—January 8, 1885: The full sum of $7,500 is to be paid on or before March 9, 1885, and further sums of $2,500 each to be paid on the 8th day of April and of each subsequent month until further order of this Court. A proper allowance for counsel is $55,000, which sum defendant is directed to pay plaintiff for the purpose of enabling to prossecute this action; said payment is to be made on or before March 9, 1885. Inasmuch as plaintiff's counsel have requested me to make an apportionment of the gross sum allowed as counsel fee, I do so as follows; To Tyler & Tyler, $20,000: to David S. Terry, $10,000; to Flournoy, Mhoon & Fournoy, $10,000: to W. H. Levy, $10,000, and to Clement, Osment & Clement, $5,000."

Sharon is reported as saying that he would not pay; that his counsel would take steps to stop all proceedings under the decision till the Supreme Court shall have made a final decision in the matter.

A GENERAL substitute bill has been adopted in the Legislature for the bills introduced by Mr. Reddy in the Senate and by Mr. Van Voorhies in the Assembly, for fixing salaries of county officers. This substitute bill provides for the same amounts to be paid to officers as was named in the petetion sent from Inyo county; but on the second reading of the bill in the Assembly, Mr. Van Voorhies moved to amend by changing the salary of District Attorney from fifteen hundred dollars per annum, to nine hundred dollars per annum. The amendment was adopted. The bill has since passed in the Assembly, and is now in the Senate.

The tax payers of Inyo county did not ask Mr. Van Voorhies to make the above change in the Salary of District Attorney, and beyond all doubt it is not the wish of many tax payers that such change should be made. But the Session is now so far advanced, that to ask for a reamendment would cause such delay as would be almost certain to prevent the bill becoming a law at this time. Then no change could be had till two years hence; in the mean time a new set of officers would be in office, and their salaries could not be changed during their term of office. This would cause a continuance of the present exhorbitant salaries for four years longer, and would make to the people of Inyo a difference of forty five thousand dollars; enough to pay half of the bonded debt of the county. There is to much at stake to risk losing it by asking for a reamendment of the bill. No anxiety need be felt least the low salary named in the bill should prevent the county having the services of a competent Attorney; there is a legal way by which such salary can be fixed, independent of this bill, as will secure competent counsel. When the time comes that way will be pointed out.

Mr. Carmer, Consul-General in Switzerland, reports that the country will receive its supplies of wheat from Russia, and he urges American exporters to send a competent agent to Europe to acquire information on this question.

The late Duke of Buccleuch ... 458,108 acres of land, which was distributed in six counties of England and seven counties of Scotland. His annual income from this land was nearly $2,000,000. His income from other sources was $50,000 a year.

The honor of being a member of the new German State Council is a pretty costly one. The members receive no pay, not even free passage over the railroads, and have to defray the expenses of their temporary sojourn in Berlin out of their own pockets.

The Educated Girl.

Is the man of the period shy of the educated girl of the deriod?—that is the question. Must the popular plea for high education for females encounter the objection that a woman who has read Virgil and the Æneid in the original, and is posted on the differential calculus, is therefore, and in direct consequence, more unlovely? It is stated, on what looks like authority, that out of 596 graduates of Vassar College only 188 have married since that climax of career. Of course, in the cases of some, only a year or two has elapsed; but most of them graduated years ago, and some of them are old maids of the deepest dye. What is the matter? It cannot be that they are so unattractive as to have had no offers. Every Gill has her Jack—sometimes a whole plantoon of them—and every girl can get married if she will. Does intellectual training make girls fastidious—finical, perhaps—difficult to please, unwilling to accept the honest hand and sincere hearts of youths less brilliantly veneered?

It should not have its tendency,; for in most of the happiest marriages in the land the bride has nearly all of the education. As our iudustrial and social machinery is at present managed, the girls have a better chance than the boys to study; the wives than the husbands. So, notwithstanding the fact that the most profound scholars of our time are chiefly men who have had a long and severe professional training a majority of the educated people of the country are women. Thousands of men who make the best of husbands—not only kind, amiable and tender, but shrewd, intelligent and thoughtful—know nothing of any language but their own, and never in their lives used "were" to interpret the subjunctive mood. Armies of girls have made a mistake in this matter, unwisely scorning a suitor who spelled "separate" with three ees, or who said, "it is me," but who might yet be a tender-hearted, sagacious and even mentally profound man, worthy of all acceptation.

In fact, we are by no means certain that educated and professional men make the best husbands. They are less likely to keep regular hours, and more likely to "talk shop" and to establish the everlasting shops in the home than are mercantile men, or brokers, or bankers, or clerks, or railroad managers. They are more likely to be abstracted, even when their hands are not occupied.

Girls should remember that men of genius or of overshadowing literary talent have seldom made successful husbands. They almost always lack domesticity, and love ideas better than their wives. Look at Shakespeare, who lived at the theatre and the club, and, when he died, gave his wife merely his "second-best bedstead." Think of Milton, who was one of the most domineering and uncomfortable of husbands that ever tormented a gentle woman. Think of Byron and Dickens and Bulwer, whose marriage were each a hideous mockery. Think of Greeley and Raymond, not to mention other men quite as famous, who have had little or no home life. Don't hesitate to marry, girls, because the gentlemen who pay suit to you do not pronounce as you have been taught to do, or do not always observe the inflexible rules of English grammar.

An unblemished character is more important than a knowledge of music, and good nature more desirable than correct spelling. Better is a stammering tongue where love is than five foreign languages, and a heart with a first mortgage on it held by another girl.

Perhaps the sweet graduates of Vassar have been libeled, and the figures we have quoted are incorrect; but, even then, this little sermon can do no harm.

The Evolution of the Skate.

Many a man of to-day can remember the long curled toe, steel runner imbedded in a solid piece of wood that formed the skate of his boyhood days. To the wood were attached the long straps, and the screw in the heel that fastened the skate to the foot. This skate, too, was guttered, and the fellow that had a pair of "smooth bottoms" was the envy and wonder of all the other boys. The curly-toe gradually disappeared, the long straps gave place to the double toe-strap, and the heel-strap that with its harness rings always reminded one of a halter, took flight with the old wood-screw that used to be bored into the boot-heel. Other changes followed rapidly. Some bright skater concluded that better speed could be attained if less steel touched the ice, and the "rocker" skate made its appearance. Another happy thought knocked the toe-straps out in one round, and gave the steel clamps, tightened by means of a double screw and wrench, in place of them. A plate in the boot-heel, and knob on the skate, said "good-bye" to the heel-strap, and very shortly afterward clamps similar to those on the toe made the heel of the skate nearly perfect. A simple turn of the wrist connected the two sets of clamps with a lever, and the skate was made.—[Milwaukee Globe. [The Globe might have added that the process of evolution has to a very large extent done away with ice skates, and substituted rollers, which are now all the craze.]

When we began to live out of ourselves, to appreciate interests that we do not share, and sympathize with joy and sorrow not our own, to respect knowledge that we have not gained, and wisdom from whatever sourse it comes, then shall we be released from the chains which keep us back from seeing much that is true, and feeling much that is good, and our lives will become full and rich, to ourselves, and precious to others.

A man in Arizona is suing a local paper because it announced that he was the father of a thieving boy a week old. The editor meant to say "thriving," but fate and the typesetter ordered otherwise.

OFFICIAL.

Delinquent Tax List

For 1884,

INYO COUNTY,

CALIFORNIA.

Ah Coon—Lot No 4 in block No 6 in the town of Hawley, personal property, 1 poll tax 1 hospital tax ..... $ 12 27

Argus Range Silver Mining Company—The Argus Range mill and mill site, five acres; five miles of water pipe and five acres of land containing springs; also boarding house and stables 1500 feet in the Benanza King mine; 1500 feet in the North Star mine; 1500 feet in the Natoha mine; personal property 379 43

Abachuco, Ygnacio, and Francisco Paradas—The south east qr of section 14, township 15 south, range 36 east, 160 acres; lot No 1 in block No 16 in the town of Lone Pine with improvements; personal property, a poll tax, 1 hospital tax 40 41

Knuppel, John—The east half of south west qr and south hf of north west qr, section 6 township 16 south, range 37 east, 160 acres; personal property, 1 poll tax, 1 hospital tax 16 71

Kern and Inyo Stage Company—The new Coso station situated about eight miles north of the town of Darwin, water pipes, tanks and buildings, station at Panamint Junction, buildings, water pipes and tank, stable and station at Little Lake 38 94

Keeler, J. N—The fractional west hf of northwest qr, section 4 township 17 south, range 38 east, 153 22-100 acres; also fractional section 5, township 17 south range 38 east; personal property 9 91

Leahy, D. F—Personal property, 1 poll tax, 1 hospital tax 10 40

Little Chief Silver Mining Company—The Little Chief mine, situate in Panamint Mining District, lot 47 township 21 south, range 45 east, 20 44-100 acres The Little Chief mill site, situated in said mining district, lot 47, township 21 south, range 45 east, 4 86-100 acres 5 27

Miranda, Mrs. Andra—House and lot in town of Lone Pine, lot No 2 in block No 26 personal property 10 56

Mann, Mrs H. A—House and lot at Bishop Creek Station known as H. A. Mann's residence, said lot being 50x100 feet; personal property 15 50

Murphy, J. W—The south half of north west qr, section 7, township 13 south, range 35 east, 80 acres; 1 poll tax, 1 hospital tax 10 57

Marvel Silver Mining Company—The Marvel silver mine situated in Panamint Mining District lot No 47, township 21 south range 45 east, 16 71-100 acres 12 61

Moder, J. H—The north half of north west qr and west hf of south east qr, section 24, township 8 south, range 34 east, 160 acres; timber claim in section 13, township 8 south, range 34 east, 80 acres; east hf of south west qr, south west qr of south east qr, and south east qr of south west qr, section 13, township 8 south, range 34 east, 160 acres, personal property 1 poll tax, 1 hospital tax 3 22

Morrissey, Mrs. Grace T—House and lot in town of Darwin 50x100 feet on north side of Main street and known as Mrs. Morrissey's saloon and restaurant; three houses and lot in said town and lot being 50x100 feet situated on south side of Main street and west of J. J. Gunn's saloon; personal property, 1 dog 108 95

Michelo, J. A—Hot and lot in town of Cerro Gordo; 1 poll tax, 1 hospital tax 25 37

Montezuma Mining Company—The Montezuma furnace site, furnace and assay office, situated near Ema station, near C. & C. railroad, and about 8 miles south of the town of Big Pine 8 19

Mead, Mrs. E., and A. H. Mead—The east half of south west qr, section 6, township 8 south, range 34 east; north east qr of north west qr, section 7, township 8 south, range 34 east, 120 acres; personal property, 1 poll tax, 1 hospital tax 26 10

Morcho, Antonio—House and lot in town of Cerro Gordo on Main street, south of L. Lasky's store 36 50

Martes, Domingo—House in Beveridge Mining District and known as Morales' residence 2 22

Mecina, Juan—Lots No 5 and 8 in block No 16 in the town of Lone Pine; personal property 2 22

McNally, James T—The south west qr, section 35, township 6 south, range 33 east, 160 acres 5 27

McCosky, G. W. Jr—The south east qr, section 32, township 6 south, range 33 east, 160 acres; personal property, 1 poll tax, 1 hospital tax 7 33

McMurry, John—House on Government land and known as John McMurry's ranch, 40 acres; personal property 22 40

McCown, John, and William J. McCown—The west half of north west qr, section 7, township 8 south range 34 east west half of south west qr, section 6, township 8 south, range 34 east, 160 acres; south west qr, section 12, township 8 south, range 34 east, 160 acres; east half of south east qr, section 7, township 8 south, range 34 east, 80 acres; personal property, 2 poll taxes, 2 hospital taxes 16 53

McDonough, Thomas, and W. C. Kisling—House and lot in Aarastra Canyon in Beveridge Mining District and known as McDonough's store; personal property 1 poll tax, 1 hospital tax 84 94

McEvoy, Charles—Five stamp mill, mill site and out-buildings, all situated in Beveridge Mining District, and known as Charles McEvoy & Co's mill, personal property, 1 poll tax 1 hospital tax 28 99

McKellips, A.—Unsurveyed land situated on Owens River south of Carysopolis mill and known as McKellips' ranch, 160 acres, personal property, 1 poll tax 1 hospital tax, 1 dog 111 74

Maxim Mill and Mining Company, A. L. Nevins, Agent—The Maxim mill and mill site, situated about 1 mile north of the Chrysopolis mill in Union Mining District; personal property 60 64

Nichols, W. M—House and lot in town of Bishop Creek on west side of Main street and known as A. L. Smith's Photograph Gallery; said lot being 25x100 feet 22 33

Norton, G. W—Personal property, 2 poll taxes, 2 hospital taxes 10 74

Nims, Warren—Personal property 33 65

Ochoa, Mrs Angela—House and lots at Lone Pine; lots 3, 6 and 7 in block 26; personal property 7 33

Owens River Mining and Smelting Company—Furnace and furnace site situated about 8 miles south east of the town of Big Pine; 1500 feet in the Montezuma mine, situated in Union Mining District; personal property 8 51

Poga, Gomazieda—Lot No 2 in block No 17 in the town of Lone Pine 159 84

Pheby & Pinney—Building known as the boarding house, one store and office, all in Panamint Mining District; personal property 2 50

Paris, O. M—One fractional lot 16x100 feet on Main street in town of Darwin and joining White & Anthony's store on the north 37 68

Poleta Mining Company—1500 feet in the Poleta mine, situated in Bishop Creek Mining District and about 2½ miles east of Owens River; personal property 3 92

Pearman, W. M and A. Mouley—Possessory claim on unsurveyed land situated about four miles north of the town of Big Pine, 80 acres; personal property, 2 poll taxes, 2 hospital taxes 35 13

Pioneer Mill and Mining Company—1 four stamp mill situated in Kearsarge Canyon and known as the Pioneer mill, and water right situated in same mining district 26 27

Reynolds, G. W—The north east qr of south west qr and north west qr of south east qr, south east qr of north west qr and south west qr of north east qr, section 2, township 6 south, range 33 east, 160 acres; the south east qr of north east qr, east hf of south east qr and south west qr of south east qr, section 20, township 6 south, range 33 east, 16 acres; personal property, 1 poll tax, 1 hospital tax 7 33

Redding, John—The north half of south east qr, south east qr of south east qr, north east qr of north east qr, section 10, township 7 south range 33 east, 160 acres, Desert claim, south hf of south east qr, section 10, township 7 south, range 33 east, 80 acres; personal property, 1 poll tax, 1 hospital tax 114 64

Reed, S—House and lot on Main street north east of Reddy's house in town of Darwin and known as Sim Reed's residence 21 50

Rowan, Ben (Indian)—The west half of north west qr, south qr of south west qr and south east qr of south east qr, section 5, township 6 south, range 34 east, 160 acres; personal property, 1 poll tax, 1 hospital tax 2 20

Reilly, Edward—1500 feet in the North Point mine, 1500 feet in the Star mine, one store building and situated in Sherman Mining District 17 22

Reddy, Mrs. E. A—House and lots in the town of Lone Pine, lots 6 and 7 in block No 2; personal property 97 05

Romero, Mrs Luz—House and lot in the town of Lone Pine; lot No 7 in block No 7; personal property 15 50

Roberts, R. E—The east hf of north east qr, south west qr of north east qr, north east qr of south east qr, section 6, township 6 south, range 34 east, 159 acres 6 98

Robinson, Mrs. R. M—Fractional part of north east qr of north east qr, section 18, township 35 south, range 35 east, 1½ acres, adjoining land of John Baxter on the south; personal property 14 45

Sterling, Edward H—The north half of south east qr and west half of north east qr, section 29, township 7 south, range 33 east, 160 acres; personal property, 2 poll taxes, 2 hospital taxes 29 67

Steward, J. J—The south east qr of south east qr, section 21, south west qr of south west qr, section 22, north east qr of north east qr; section 28, north west qr of north west qr, section 27, township 9 south, range 34 east, 160 acres, personal property 1 dog 30 37

Schmitt, J. L—three buildings on two lots in Lone Pine, lots No 1 and 4 in block No 12 ..... 40 79

Steward, J. B—The south east qr of south west qr and south hf of south east qr, section 20 north east qr of north east qr, section 9, township 9 south, range 34 east, 160 acres; Desert claim, south hf of south west qr of south east qr, section 21 north west qr of north west qr, section 28, township 9 south, range 34 east, 160 acres 78 99

Stewarts Wonder Silver Mining Company—The Stewart Wonder mine situated in Panamint Mining District, lot No 39 in township 21 south, range 45 east, 20 60-100 acres; rewards Wonder mill site in said district, lot No 43 in township 21 south, range 45 east 5 acres 21 50

Southern Development Company—1500 feet in the Sterling mine situated in Coso Mining District; personal property 2 20

Saylor, Mrs. L—House and lot at Alford Station and known as Saylor's Hotel; lot 40x90 feet, personal property, 1 poll tax 1 hospital tax 17 22

Townsend, B. M—Personal property, 1 poll tax, 1 hospital tax 20 46

Todd, G. W—Homestead on unsurveyed land situated about 6 miles west of the town of Independence and known as Todd's ranch, 40 acres; 1 poll tax, 1 hospital tax 9 28

Unknown Owners—The Cerro Gordo Furnace and furnace site situated in Coso Mining District and near the town of Darwin 97 05

Vaughn, Jim (Indian)—The south hf of south west qr, section 8, township 6 south, range 34 east, 80 acres; personal property, 1 poll tax, 1 hospital tax 15 50

Walter, Mrs M—Homestead, south hf of south west qr, section 25, township 6 south, range 33 east, 80 acres, personal property 6 98

Watson, G. W—The west half of south west qr section 4; west half of north west qr, section 9, township 8 south, range 35 east, 160 acres; east half of south west qr section 4 east hf of north west qr, section 9, township 8 south, range 33 east, 160 acres; personal property, 1 dog 10 92

Whitlock, H. G—The north east qr of north east qr, section 8, south east qr of south east qr, section 5, north east qr of south east qr, section 8 and south east qr of north east qr, section 8, township 8 south, range 33 east, 160 acres, personal property 1 dog 34 56

White, Mrs. C. K—House and lot in town of Bishop Creek situated on the north side of Church street and opposite the school house lot, said lot being 30x100 feet; personal property 12 45

Wing Woo—House and lot in town of Darwin situated on the east side of the gulch and known as Wing Woo's Bakery; 1 poll tax, 1 hospital tax 65 7

Wyoming Silver Mining Company—The Wyoming silver mine situated in Panamint Mining District, lot No 38 in township 21 south range 45 east, 20 60-100 acres 16 53

Zaun, F—House and lot in Lone Pine, being 23x100 feet, lot No 4 in block No 17 House and lots in Lone Pine being 100x100 feet; lots 1 and 4 in block No 20; personal property, 1 poll tax 1 hospital tax 11 60

Rowan, Joseph—The north hf of south west qr (less one acre in south east corner) section 6 township 7 south, range 33 east; north hf of south west qr of south west qr, section 6 township 7 south, range 33 east 104 acres; above subject to mortgage to Bernard Cluskey, dated January 31, 1880 and recorded in book "C" of mortgages, page 181, value $726; personal property, 1 poll tax 1 hospital tax 26 10

Brown, James H—The north hf of south east qr, and north hf of south west qr section 22, township 6 south, range 32 east, 160 acres, above subject to mortgage to secure a debt given by J. H. Brown to James L. Love, dated November 1, 1883, and recorded in book "C" of mortgages, page 501, value $200; personal property 29 83

Clark, Thomas—The north east qr of south west qr and south west qr of south east qr; north west qr of south west qr, section 9, township 7 south, range 33 east 120 acres, above (save north west qr of south west qr section 9, township 7 south, range 33 east) subject to mortgage to secure a debt given by Thomas Clark and Julia A. Clark, dated March 14 1881, and recorded in book "C" of mortgages, page 306, value $262; personal property, 1 dog 91 91

Weliman, Peck & Company—Lot rest in the property of J. H. Stoutenborough, viz: Lot commencing at the south west corner of B. Peeler's land, thence running southerly along the easterly line of the road 132 feet thence easterly 315 feet more or less, thence northerly 232 feet, thence westerly 215 feet, thence southerly 210 feet, thence westerly 100 feet known as J. H. Stoutenborough's store and residence, created by mortgage to secure a debt given by J. H. Stoutenborough to Weliman, Peck & Company, dated January 11, 1882, and recorded in book "C" of mortgages page 397, value, $1,771 ..... 38 37

Merryman, E—The south east qr, section 31 township 6 south, range 33 east, 160 acres; above subject to a mortgage to secure a debt given by E. Merryman to Thomas Williams dated March 6 1883 and recorded in book "C" of mortgages page 508, value $611; personal property 54 90

Scrivener, Arthur—Interest in the property of J. S. Rothschild, viz: All the following described real property situated in Cerro Gordo Mining District; 1,302½ undivided feet in the Ignacio mine the Mono mine, the Matilda mine, all the right, title and interest of J. S. Rothschild to the Potosi tunnel, and that certain dwelling situated near the mouth of said Potosi tunnel, created by mortgage to secure a debt given by J. S. Rothschild to Arthur Scrivener, Trustee at the London and San Francisco Bank, dated December 6 1881, and recorded in book "D" of mortgages, page 363, value, 2,775 ..... 38 68

Clarke, John—The north west qr, section 7, township 7 south, range 33 east, 160 acres, less the frontage on the west side of Main street in the town of Bishop Creek above subject to mortgage to secure a debt given by John Clarke and wife to A. Marks, dated May 31, 1883, and recorded in book "C" of mortgages, page 541, value $2,400. North east qr, section 7, township 7 south, range 33 east, 160 acres; north hf of south west qr, section 7, township 7 south, range 33 east, 80 acres; that certain lot of land situated in the town of Bishop Creek, commencing at the north east corner of block No. 1, thence south 126 feet, west 100 feet, thence north 126, thence east 100 feet, on which premises is erected a blacksmith shop; personal property, 1 poll tax, 1 hospital tax, 1 dog 95 20

Jones, Thomas E—The south west qr of section 22, township 6 south, range 31 east, 160 acres; above subject to mortgage to secure a debt given by Thomas E. Jones and wife to A. Marks, dated January 10, 1884, recorded in book "D" of mortgages page 18, value $ 000 The south hf of north east qr, north east qr of north east qr, section 22, township 6 south, range 31 east; south west qr of south west qr section 23, township 6 south, range 31 east, 160 acres; personal property, 2 poll taxes, 2 hospital taxes, 1 dog 244 35

Parker, James E—House and fractional lots in town of Independence—lots 9 and 11 in block 20. Above subject to mortgage to secure a debt given by James E. Parker and wife, dated October 31st, 1881, and recorded in book "C" of mortgages, page 347, value, $500; personal property, 1 poll tax, 1 hospital tax, 1 dog 144 65

E. Robinson, John Clowin, Joseph Ferubach and O. I. Mann—Interest in property of James E. Parker, viz: House and fractional lots in town of Independence—fractional lots Nos 9 and 11 in block 20; created by mortgage to secure a debt given by James E. Parker and M. Q. Parker, to E. Robinson et al, dated October 31, 1881, and recorded in book "C" of mortgages, page 347, value $500. Interest in the property of James E. Parker, viz: Printing presses and materials of the Inyo independent, created by mortgage to secure a debt given by James E. Parker to E. Robinson et al, dated October 22 1881, and recorded in book "A" of chattel mortgage, page 118, value $700 18 49

Public Notice

Is hereby given that unless the above taxes and costs are paid I will on

Monday the 23rd Day of February, 1885,

Between the hours of 9 o'clock A. M. and 4 o'clock P. M., to wit, at the hour of 10 o'clock A. M., commence to sell the above described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day according to adjournments until the whole real property above described, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of such assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 26th day of January, A. D. 1885.

JOHN S. McGEE,
Sheriff and Ex-Officio Tax-Collector, Inyo County, California.
By J. J. MOORE, Deputy.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, FEBRUARY 21,.....1885.

—An assessment has been levied upon the stock of the Bishop Creek ditch. See the notice in another column.

—The weather is so warm, the climate of Inyo so favorable to good health, and the people so honest that doctors and lawyers have nothing to do but si on the curbstones and swop lies.

—It is reported that there was quite an excitement at Bishop Creek, caused by the recent discovery just west of town of a large and rich vein of quartz. Every body was going to take a look at the new find.

—In another column will be found the death notice of two children of Mr. and Mrs. Grover, formerly of Big Pine, Mrs. Grover is daughter of Mr. J. W. McMurry of Big Pine. The death of both little ones leaves the unhappy parents childless,

—Bad half dollars are in circulation; good coins are split into two pieces, the silver is cut out of each half and is replaced by lead; tho two pieces are then joined together again, and the coin look as good as ever. The fraud can be detested readily by sounding the suspected coin.

—Planting of fruit trees is going on quite extensively in the valley. E. Robinson is setting out a great many trees of various kinds at Independence. R. Diaz, has added largely this season to his already extensive orchard near Lone Pine. S. A. Densmore at the Fort has been planting during the past few weeks, and is still at it. The trees mostly planted are apple, pear, peach, plum and cherry. Mr. Densmore has planted a good many ornamental trees and shrubbery.

—Last Saturday Carson kept public holiday in honor of the memory of the dead. The bodies of thirty-six soldiers buried at Fort Churchill twenty years or more ago, were on that day reinterred in the Grand Army plot in that town. Congress appropriated $1,000 for the transfer of the remains, and the Legislature of Nevada $200, to be expended in paying due honors to the dead on their arrival at the State Capital. The Legislature adjourned out of respect for the dead, and the members formed part of the procession.

NOTICE.—Owners of hogs will please take notice, and I hereby give fair warning, that from and after the publication of this notice I will at once shoot any hogs I find trespassing on my premises.

ISAAC HARRIS.

Independence, Feb 21st, 1885.

HARD LUCK.—Pat Keyes had hard luck over in Beveridge during the snow storm; his pack animals were caught by the storm in the mountains, and all perished of cold and hunger. Pat came up from Darwin last Sunday and bears no trace of suffering in his own person, he is as good looking as ever

MISUSE OF ARMS.—A young couple driving through town the other night, collided with a large post. There was a mash, a crash, a smash; flying spokes and horses, but no broken bones. It was a case of miss use of arms, but the right of a miss to use arms is universally conceded.

A GROSS MISTAKE.—Last week a very gross error was made in printing the report of Superintendent Fitzgerald. As printed the value of bullion is stated to be 16.6 onces silver per ton; the real value was 219.6 ounces per ton. Mr. Fitzgerald has succeeded in getting four more teams at work, and is confident that the next run at the furnace will be still better than the last, though to get nearly eleven thousand dollars as the result of four days work is good enough.

PROSPECTORS' STRIKE.—Two well-known prospectors named Box and Hendry have struck a good thing near Kinkead Station, on the Carson and Colorado Railroad. While developing their mine they made wages with a hand-mortar, the rock being quite rich in free gold. This summer there will be a good deal of prospecting done in that vicinity. A number of Comstock miners are already at work down there and more will follow their example.—*Enterprise.*

Personal Mention.

Mr. and Mrs. Conklin arrived home last Monday.

Mr. N. Rhine got back to Independence last Monday.

William Rowan came down from Bishop Creek last Thursday and brought along his Norman horse.

Mr. Minear is in San Francisco, trying to reorganize a company for reparing and working the Elna furnace.

Thomas E. Jones came down from Round valley last Thursday, he brought a large load of flour and sold it to Harris & Rhine.

Tom McDonough came up from Lone Pine last Wednesday and stayed in town a few days; he is still suffering from rheumatism.

William Sherwin and his brother are reported to have found a large and rich ledge of silver bearing ore, on Rock Creek, above Round valley.

Frank Fitzgerald came up from Darwin last Sunday, he was suffering from lead poison and stayed in town all week for medical treatment: he is now much better.

H. P. Cartier is building for himself a nice residence in town, it will be an L shaped story and a half cottage, and will be finished with all the neatness and taste characteristic of all work done by Mr. Cartier.

Explanatory.

It is but justice that the following from Mr. Minear, in reference to the late fire at Elna, should be published. He says; "I found an opinion prevailing among some people, that in selling the personal property of the Owens River Mining and smelting Company, it was the object of the C & C railroad Company to get control of the property, to the entire detriment of the other creditors. In other words, to gobble up every thing, and leave all others out. It can matter but little what is said in public about my private business, but as my Company owe bills to a number of people in Inyo county, I would regret to have them form an unfavorable opinion of the course taken by the C. & C. Company. Mr. Yerrington and I had a fair understanding, that if I could induce my Company to allow him to take judgment for his Company, he would proceed to sell the personal property, buy it in, and allow me to go on and run out bullion to pay the debts and he would accept his *pro rata* of the proceeds till all debts should be paid, and the property cleared. Mr. Yerrington further agreed, that when a car load of bullion was ready for shipment, if I would ship it to him and let him know what his proportion of the proceeds would be, he would at once send me money for the whole of the balance, so that I could make payment to creditors within three days after shipment of bullion. He further voluntarily promised to assist me in getting outside ore, the better to achive final success. Instead of Mr. Yerrington ever intimating to me, directly or indirectly, that he wanted any advantage over others in this transaction, the very opposite is the fact; and in my judgment had I been permitted to go on with work under the foregoing arrangement, toward the end of March my Company would not have owed a dollar to any person in Inyo county. But the property has been destroyed, and I am estopped. I have at least nine thousand dollars worth of ore at the furnace; the cost of reducing this to bullion would have been three thousand dollars. There were also fifty tons of fuel, a quanity of flux worth ten to twelve hundred dollars, and a great deal of supplies of various kinds, all of which cost money. All of this was destroyed by the fire. The Company had no insurance, and to the Stockholders and creditors the result of the fire is a total loss.

A. P. MINEAR. Sup't.

Bloodshed Prevented.

A DISPUTE recently occured at Calico that would certainly have ended in a desperate battle had it not been for the presence of mind and quick action of the Deputy Sherriff, Joseph Le Cyr. The dispute was over a small piece of mineral ground considered to be very rich. The Calico *Print* says; "In the night rererred to Le Cyr was notified that a lively time was going on in that neighborhood with a prospect of bloodshed. Acting under legal advice he concluded to repair the scene of action at once, and in the dead hours of night he proceeded to the said grounds and there found, as stated, the same held by a party of resolute and determind men armed with Winchester rifles, shotguns, and small arms, in such a position as to resist successfully a hundred men. Le Cyr then went and met the other party, and persuaded them to appeal to the law instead of rushing into a battle when many lives must have been sacrificed. The dispute will now be settled peacefully in the Courts. There is no doubt that Le Cyr deserves great credit for his prompt action and wise council, which prevented bloodshed.

In Kansas.

Writing from Hutchinson, Kansas, Mr. G. W. Brady says; "I arrived here all right and found friends glad to see me. Hutchinson is quite a lively town of about 4000 inhabitants; it is surrounded by a good farming country, and business appears to be lively. I have been around considerable since my arrival, and find that temperance prevails to such an extent that I have not seen a place where a person can irrigate, or even get morning bitters. Thanks to Johny Irwin, I have yet a supply left in my valise, and after taking a little in the morning, I go up town and talk temperance with the rest of them. It is a good cause, and I stand up for it. Last night I went to a Minstrel show, the house was crowded: if our East Lyone company were here they would make a strike. My brother tells me the people here go wild over a show of any kind. The Firm with whom my brother is engaged, buy a great deal of wheat; they are paying thirty eight cents per bushel to day. A very disagreeable thing here is the mud: we are not used to that in Independence. I will not go any farther east: I am told that New Orleans is now a very expensive place to go, the rule there is to guess at the size of a strangers pile and make all they can out of him.

SUPERINTENDENT'S REPORT.—Superintendent's office, Modock Con. Mining Co. Lookout, Cal., Feb. 18, 1885.

J. W. PEW, SEC. *Dear Sir:*— As stated in my last, I resumed sinking on ore body. Have let contract for coal, wood and iron. Will have three, if not four teams engaged as soon as all the bullion is at the railroad.

Signed, F. FITZGERALD,
Lessee.

DIED

GROVER—At Cornalas, Missoula county, Montana, January 26, 1885, Essie youngest child of Mr. and Mrs. Henry Grover, aged 2 years, 5 months and 2 days. At same place, February 3, 1885, Myrtle, only remaining child of Mr. and Mrs. Grover, aged 5 years, 2 months and 8 days.

Two little buds of pureness,
Fade in the withering breath,
That chills our dearest treasures.
The powerful work of Death.

Better a home in heaven,
Where sorrows never stray.
God in his wisdom knoweth,
Why they are taken away.

NEW ADVERTISEMENTS.

TREASURER'S REPORT.

Semi-Annual Report of the Treasurer of Inyo County.

To the Hon. Board of Supervisors of Inyo County, Cal.: GENTLEMEN—I herewith hand you my Quarterly Report of County Financial Affairs from November 1, 1884, up to and including January 31, 1885:

NOTICE OF ASSESSMENT.

BISHOP CREEK DITCH COMPANY. LOCATION of Principal place of business Bishop Creek Inyo county, California

Notice is hereby given that at a meeting of the Board of Trustees held on the 14th day of February, 1885, an assessment of Two Dollars on the Northern Division and Fifteen Dollars on the Southern Division per share was levied upon the capital stock of the Corporation, payable immediately to the Secretary, at Bishop Creek.

Any stock on which the Assessment shall remain unpaid on the First day of April, 1885, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on the Eighteenth day of April, 1885, to pay the delinquent Assessment, together with the cost of advertising and expenses of sale.

L. A. JAMES, Sec.

36 Bishop Creek, Inyo county, Cal.

Germania Brewery,

LONE PINE, CAL.,

John Lubken, Prop'r.

THE UNDERSIGNED WOULD RESPECTFULLY call attention to the superior facilities of the above well-known establishment for the manufacture of the finest quality of Beer, which is furnished to customers in all parts of the county at the lowest possible rates.

SATURDAY, FEBRUARY 21,.....1885.

THE HARLEM TRAMP

Entertains the Barkeeper with Some Original Sayings.

That's what I like to see—a good fire; it looks like blooming hospitality. But it would greatly add to my present hospitality if I had a little of the stuff that breaks up homes."

"I suppose," remarked the barkeeper, "that I must treat, but what a fool a man is to put that in his mouth that steals away his brains."

"Oh, let up on that stuff," growled the tramp. "You never could put anything in your mouth to steal away your brains. Just shut off the morality lecture and produce the old stuff."

The barkeeper did. With all his faults he was good natured, and he admired the cheek of the tramp. When the tramp had disposed of the poison he said:

"It makes me tired to hear a lot of moral sayings: 'Man is known by the company he keeps,' 'a soft answer turneth away wrath,' and hundreds of other chestnuts. Why don't they get some new sayings?"

"Where can they get 'em?" asked the barkeeper.

"Why, let 'em go to a philosopher and have 'em written; what's the matter with that? While on the road I wrote a lot myself. Talk about proverbs and old sayings, you ought to hear mine."

"Let's hear 'em," said the barkeeper.

"For nothing?" said the tramp indignantly. Not much. Just proceed to wet the interior of the philosopher with another dose of insanity."

"These things I have written," said the tramp, "may not be put in choice language. They are the spontaneous outpourings of a heart that bleeds for humanity. Every one of them is a gem, and deserves a place in history. I make no claims of being educated, but there are no flies on me when it comes to sitting human nature down to the core. If the audience is ready the philosopher will gush.

"Now, gentlemen, listen. Here are the proverbs and sayings I have invented, and any infringement will be prosecuted according to law.

"A five-cent shave is better than a dirty face.

"Never judge a man by the clothes he wears. He may have borrowed them.

"A firm that pays its office boy $2 a week deserves to have its postage stamps stolen.

"It is better to be honest than be poor.

"Good clothes make a better impression on society than a good name.

"A poor man's evil deeds are a crime, a rich man's a mistake.

"A five-cent meal with contentment is better than a Delmonico lay-out with a heavy creditor.

"An honest politician is the noblest work of the Creator.

"A man who can be honest on an empty stomach can be trusted with your pocketbook.

"A dog never gets drunk, and consequently he is man's best friend.

"One half the world don't know how the other half lives, and it don't care.

"Death must be happiness. Most of living faces are sad, but nothing grins like a dead man's skull.

"Liars have their usefulness—they make the truth appear more beautiful by contrast.

"Shabby men have one consolation—pickpockets are well dressed.

"There," shouted the tramp, as he brought his fist down on the bar with a bang, "there you have a lot of sayings that are true, and can warm the hide off the old saws in one round. Now that I have enlightened your minds, what is my reward?"

The Tribes of the Soudan.

We have time and again been told that the Egyptian slave trade had been suppressed, but it has not. An official has been appointed to inspect all boats passing up or down the White Nile to see that no slaves are smuggled through. The officer came aboard our steamer and insisted upon inspecting the passengers' trunks. We assured him that there were no slaves concealed in our trunk, and refused to permit the inspection. The official may do his duty well, but immense numbers of slaves are purchased and transported by caravan down the banks of the Nile until they reach a slave camp outside Khartoum, where I saw an immense number. The False Prophet, who was born at Dongola, engaged in boat building at Abbas Island, on the Nile, and gathered around him a regiment of followers armed with spears, an army which was victorious in many battles, and literally annihilated several armies that were sent out to subdue them. There is a singular tribe of dwarfs that live on the west bank of the Nile, south of Shillooks country. One of the warriors of this tribe was only four feet tall. The Shillooks and the Dinkas, on the opposite bank of the river, have a crude form of religion, worshiping a cow. Their intelligence is of a limited order. They seem to lie without any appreciable motive for so doing. It is found, however, that the natives respond quickly to the influences of civilization and evangelization. The powerful and never conquered Shillooks are a tribe numbering over a million. They paint their faces white, color their hair, which stands out all over their heads, red, contrasting most strangely with their black bodies. They have a queer custom. A man will frequently have 500 wives. At his death his eldest son, who probably has wives of his own, must adopt his father's wives. The complications of relationship are queer. The children are uncles of his children, and his children are the nephews of his children, or something to that effect.

MISCELLANEOUS.

ROYAL BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

SCIENTIFIC AMERICAN

ESTABLISHED 1846.

The most popular Weekly newspaper devoted to science, mechanics, engineering, discoveries, inventions and patents ever published. Every number illustrated with splendid engravings. This publication, furnishes a most valuable encyclopedia of information which no person should be without. HELP for working people. Send 10 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, of all ages, grandly successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed in first hour. The broad road to fortune opens before the workers absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY!

It is a never-failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhœa, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self-Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.

DR. MINTIE will agree to forfeit Five Hundred Dollars for a case of this kind the VITAL RESTORATIVE (under his special advice and treatment) will not cure, or for anything impure or injurious found in it. Dr. Mintie treats all private diseases successfully without mercury. Consultation Free. Thorough Examination and Advice, including analysis of urine, $5.00. Price of Vital Restorative $1.50 a bottle, or four times the quantity, $5.00 sent to any address upon receipt of price, or C. O. D., secure from observation, and in private name if desired, by

A. E. MINTIE, M. D.
11 Kearney Street, San Francisco.

SAMPLE BOTTLE FREE

Will be sent to any one applying by letter, stating symptoms, sex and age. Strict secrecy in regard to all business transactions.

DR. MINTIE'S KIDNEY REMEDY, NEPHRETICUM, Cures all kinds of Kidney and Bladder Complaints. Gonorrhœa, Gleet, Leucorrhœa. For sale by all druggists; $1.00 a bottle, six bottles for $5.00.

DR. MINTIE'S DANDELION PILLS are the best and cheapest Dyspepsia and Bilious cure in the market; for sale by all druggists. oct25-1

MODERN INSTANCES.

The Curious, Romantic and Tragical Incidents of Life.

ABOVE GROUND.

One of the greatest vegetable curiosities in existence is on exhibition at Hayes & Co.'s saloon. It is a potato vine filled with well developed potatoes, which grew out of the ground in the open air, like tomatoes. They differ from the tubers which grow underground, according to established rule, by bearing a slight green tinge.

TUSSLE WITH A BEAR.

One day last week Mrs. W. K. Lee discovered a bear swimming in the Columbia, and determined on its capture. The men folks were all away, but she summoned a posse, including the children, a boat, and the dog, and, armed with a butcher knife, attempted to prevent a landing, while one of the children went after a neighbor who had a gun. The bear landed and showed fight. Mrs. Lee was treed once on a big rock, but gave chase again as the bear tried to make off. The bear turned on her again, and in retreating she tripped on a stick and went down, when the bear made a ferocious attack. She struck with a knife, and slashed it so severely on the nose that it went howling away long enough for her to regain her feet and the dog attacked it so vigorously that she made good her escape. About this time the man with the gun settled the contest, and for several days bear steaks were plenty in the neighborhood. Mrs. Lee showed great courage in this contest, and deserved a bigger share of the bear than she received.

BEN FRANKLIN'S WATCH.

Levi W. Groff, of Lancaster, Pa., a staunch old Pennsylvania farmer and stock-grower, yesterday visited the Sun office and exhibited the memorable "Benjamin Franklin watch," of which the e has been considerable newspaper mention. The timepiece is a curio y in itself. It is manufactured of silver, in the old bull's-eye pattern, with open face, and on its back bears the following inscription, in lettering still well defined notwithstanding its extreme age and, no doubt, extensive handling: "Ben Franklin, 1776." An old paper on the inside indicates that it was "Repaired by Thomas Parker, of Philadelphia, on the 24th of January, 1817," over sixty-seven years ago. The watch it appears from another paper, was made more than 125 years ago. It was probably purchased by Franklin when he represented the independent colonies at the British court in London.

SCOBELEFF'S BOMBSHELL.

Skobeleff, so goes the story, was working one evening in his tent near the Danube, or near a pond, when a Turkish bomb dropped at the threshold of the tent. The General had just time to see the sentinel outside stoop down and phlegmatically throw the shell into the water. Skobeleff approached the sentinel and said: "Do you know that you have saved my life?" "I have done my best, General." "Very well; which would you rather have, the St. George's Cross or 100 rubles?" The Sentinel was a Jew with a fine Semitic profile. "He hesitated a moment, and then said: "What is the value of the St George's Cross, my General?" "What do you mean? The cross itself is of no value; it may be worth five rubles, perhaps, but is an honor to possess it." "Well, my General," calmly said the soldier, "if it is like that, give me 95 rubles and the Cross of St. George!" Whether the prayer of that child of Israel was granted or not history does not say.

IT WAS A BOY.

A friend of the writer's who for more than forty years has been in the employment of the Dutch Government, bears personal witness to the prevalence of the custom in Sumatra up till recent times. He was once making scientific investigations in the interior of that island, and was hospitably entertained in the most hospitable manner by the native Rajah, or chief of the place he was in. A feast had been made to which he was bidden and to which he went, taking his own native servant with him. The banquet had proceeded for some time without interruption, when at last, as a crown of the feast, a beautiful brown roast joint was brought from the back of the house to the open, airy place where the repast was being held. This was cut up without remark and handed round, and the Dutch gentleman was on the point of eating his portion, having raised part of it to his lips, when his servant rushed forward and stopped him, saying, "Master, master, do not eat; it is a boy." The chief, on being questioned, admitted, with no small pride at the extent of his hospitality, that hearing that the white man would feast with him, he had ordered a young boy to be killed and cooked in his honor, as the greatest delicacy obtainable, and that the joint before them was the best part, the thigh.

THE BRAHMAN'S TERRIBLE MISTAKE.

Some shocking tragedies have occurred in the Sibsagor district of India. A traveling honorie jeweler arrived late one evening at the house of a Brahman with whom he had a slight acquaintance, and displayed his wares. The Brahman, a temporary some purchase, offered to put him up for the night. The offer was gladly accepted, and it was arranged that the jeweler should sleep on the floor in the room occupied by the Brahman's son the Brahman and his son occupying the other room. While preparing to turn in the host heard the sharpening of a duo, and fragments of a conversation being carried on between the Brahman and his wife. Suspecting foul play he induced the son to change places with him and, as soon as the jeweler was asleep, placed a dummy composed of a bundle of clothes in the bed, crept quietly out, and secreted himself in a tree at the back of the house. In about half an hour he heard the door softly opened, then exclamations of disappointment at finding no plunder, shortly afterward followed by a very angry one at the discovery of the mistake the murderer had made. From his place of concealment the jeweler then saw the Brahman come out under the tree with a hoe. He then dug a grave, in which he buried the body of his son. At early dawn the jeweler descended from his hiding-place and gave information at the nearest thanna. The police found the body under the tree, and arrested the Brahman, whose trial will come off at the next assizes.

WATER-SOAKED QUAIL.

A novel sight was witnessed a few miles below Smithland, Ky., on the Ohio, yesterday, by a party of gentlemen crossing the river in a skiff. A large flock of quail had made the attempt to fly across the river, which is very wide at that point, and, becoming exhausted with the unusual distance, all fell gradually flutter into the stream in mid river, and when the skiff was driven in to the flock they were unable to lift their water-soaked little bodies from the water, though making frantic efforts to do so, the while uttering frightened and plaintive chirps. Many were picked up so thoroughly exhausted that they remained perfectly quiet when thrown into the bottom of the skiff.

HOW A FOX STOLE A BABY.

Considerable excitement has been caused lately at Katase, a village well known to foreigners, by the doings of a fox. A young, well-to-do farmer and his wife, who have a child two months old, are occupying a small wooden building during the rebuilding of their former premises. In September 13th the wife as usual went to sleep with the little one, but waking during the night was surprised to find it had left her side. She at once called her husband, when it was discovered that one of the frail wooden doors had been broken open. The supposition naturally followed that some one had entered and stolen the infant, consequently the father started with the intention of arousing the neighbors. He had, however, only just stepped outside when he perceived a large fox run from under the veranda of the house opposite. Suspecting that Reynard was the culprit, lights were procured and a search made, which, to the delight of the parents, resulted in the discovery of the baby, who, strange to say, had received no injury beyond a few scratches.

WOULDN'T TAKE LAUDANUM.

There were three cats in a William street family, and the lady of the house concluded that one was sufficient to do all the business, and a decree of death was passed on the old cat and her kitten. The question of the manner of death was settled, and the chloroform purchased. Day passed after the chloroform was in the house before the executioner could muster courage to execute the sentence. To facilitate matters it only thought that some laudanum added to the cat's milk, would produce a stupor that would make chloroforming more easy. The drug was put in the milk and tendered the old cat. She tasted the food, then eyes suspiciously about her, refused to eat. The kitten rushed to the dish to partake of the milk, but was violently knocked away by the old cat, who took a corner of a mat and covered over the dish to hide it from the kitten and prevent her from taking the "medicine." The lady could not believe that the act was intentional on the part of the cat, and uncovered the dish and again tendered the milk to her. She again knocked the kitten from the dish and covered it more carefully than before. This repetition of the protective act gained the good will of the lady, and she gave up killing the cats. She cannot satisfy her mind, however, whether the action of the cat was prompted by instinct or reason.

HEELS OVER HEAD.

An Irish gentleman with red artificial whiskers, four men with burnt-cork faces, a dashing young woman in white satin, and several other curiosities came flying out of the back windows and doors of the Dime Museum last night. From the subterranean depths under the stage of the theatre came a series of the most distracting cries, mingled with hair-raising roars. The unearthly noise was made by the clown elephant Pickaninny, who had dropped through the stage and gone crashing into the green room, where the actors were waiting for the curtain to go up on the entertainment. The occupants of the green room supposed that the walls of the theatre had fallen in and fled wildly to the street.

The surprised and frightened elephant lay in the middle of a pile of broken boards and tattered scenery. He had fallen ten feet, and made no effort to extricate himself, but lay where he landed, roaring in a way that aroused the neighborhood. He was pulled out and run upstairs to the stage, and as an animal expert said that the animal's ears and tusks were not sealed, the beast was put through his performance as usual. The trainer, in rehearsing the beast in a somersault between performances, had allowed him to fall upon a week trap, which gave way, and the playful little pachyderm went heels over head down below. An extra force of carpenters spent the night bracing the stage to resist the one ton acrobat.

Toys and National Character.

An old toy maker of New York holds the rather peculiar notion that a nation's character is found by the toys it uses. Instead of the character governing the toys. "Show me a nation's toys," he says, "and I will tell you what kind of people they are. Now the Germans, you know, are a great toy nation. They go in for quantity rather than quality. They manufacture cheap toys and every child in the country has plenty of them. Every German child has plenty of toys and the result is that the nation has become the most sociable, kind and honest one in the world; possessed of all the household virtues and good to their wives and children. The French, on the other hand, go in for quality rather than quantity; everything they make is a work of art; their children have few toys, and those they have are very expensive and must be played with in a very quiet, gentle way. Therefore the French have become refined, polite, suave. The Chinese have always been great people for toys, as far as their history can show us. They ransack earth and sky and sea for ideas; giants and dwarfs and strange fish and sea serpents and various nondescript beings and animals all serve, and they give the child en plenty of them. The result is that the Chinese are like the Germans among themselves, great for feast days and celebrations and very industrious. Japanese are much the same. The English, now, run more for toys for outdoor use and games which exercise—projectiles, tennis, football, cricket, shinny, hoops and marbles. The boys play pullaway and all such running games and girls play ring games. How different the English, social, athletic children are from the Chinese! Again look at the Spaniards. Very few toys there. What's the result? Why they are treacherous, harsh and implacable. The Indians, whose only toy is the bow and arrow, has thereby cultivated the killing instinct till he has become entirely untamable. Americans have always been great for giving their children something which will exercise their ingenuity. They must have something new, and the child en are so precious that they tire of a toy quickly, unless its possibilities of a combination are very hard to exhaust. The consequence is that the American children grow up into the most clever, inventive and adaptative people on the face of the globe."

A Royal Fair Lord.

Louis XV., like most people, had his moments of forgetfulness, and it frequently embarrassed his courtiers by unconsciously asking them questions which they had already replied to. One morning while at his toilet, turning to a lord in waiting, he inquired how many children he had. "Four, sire," was the answer. In the course of the day, addressing the same individual, he repeated the question and received a similar reply. Even this did not satisfy him, and when the evening came, and with it the presence of "Fredan," he once more propounded his interrogatory, which this time responded to by "Sire, your majesty." "How is that?" said he, "you told me this morning that you had only four." "So I did, sire," promptly cut the courtier, "and I told the truth; but I was afraid of trying your majesty by always telling you the same thing."

[illegible] to give our life at Saratoga, my dear," said a finely-dressed matron to her daughter the other day on the piazza of the Grand Union. "Why, what has happened? Pa is not ruined, is he, tell me truly, ma!" inquired the distressed maiden. "No, my dear, but our pa is not ruined, but his bank is and he telegraphs me to meet him in Quebec." "And we shall be near the dear, delightful Enos. What a wonderful man pa is, isn't he?"

PERSIAN CARPETS.

The Costly Work Done in Peasants Houses.

The far-famed rugs and carpets of Persia are largely made by peasants in their homes, and are in reality a sort of needlework. United States Consul-General Benjamin at Teheran has sent to the State Department a long account of the business. He says there are four leading classes of these carpets—the large sized, the rugs, the ghileem, or knitted goods, and the namads, or felt carpets. Carpets produced in Irak are called pharaghans, and are finer than other Persian carpets. Large-sized carpets must be made to order.

"Besides the paraghan carpets," he says, "there are also carpeted sometimes with fabrics from Kerwan, Shab, Hawaden, and the district of Lauristan. Also for this purpose the carpets of Deschtkevel, in Khorasson, are available, although of inferior texture to the pharaghan. The carpets of Kerwan have the texture fitted to the south usage required in covering floors; but while perhaps of superior quality to the pharaghan, they are always small and disproportionately more expensive.

"The Persian carpet par excellence is the rug. The Persians use these in preference to large ones. For covering the earth floor with a hassar or matting of split reeds, they lay over it many rugs, which completely conceal the mat. This arrangement, when composed of rugs of harmonious designs, is very rich, while the cost is actually less than if one large carpet were employed instead.

"The varieties of Persian rugs are numerous. In some sorts, like the Toskowan, there is a general similarity of design, although no two rugs are altogether identical. But in other classes, such as the rugs of Kerwan, Deschtgan, or Kurdistan, there is endless variety in design and texture.

"A point to be considered is that while the small carpets of Paris go under the general designation of rugs, it would be a serious mistake to consider them all as merely carpets of small size intended to be trod on by heavy shoes. In the first place Persians, when at home, take off their shoes, and thus a carpet of fine, delicate wool and design will last for ages, and actually improve with use such as this. In the second place, a large proportion of the rugs of Persia, and especially the finer grades, are never intended to be laid on the floor, but to cover divans or tables, or to hang as tapestries and portieres.

"This explains the extreme fineness of texture and velvety surface which many of these rugs display, and also accounts for the fringe at the ends. Some of the rugs of Kerwan are almost as fine as cashmere scarwls. The designs of these rugs were formerly of a large pattern, with a general ground of red, white, or some other uniform tint, with borders and details of minute tracery harmonizing with rather than disturbing the general effect. These patterns are unquestionably of higher artistic importance, exhibiting a quality designated by artists as breadth.

"At present, while there is apparently no difference in texture, there is an evident tendency toward smaller designs, which lose much of the effect unless seen with close inspection. Perhaps this is only the result of a reaction from long-established custom, and it may be conceded that the modern designs of Persian rugs are more popular with the average European and American buyer.

"The colors formerly employed in the rugs of Persia were imperishable. Rugs one hundred years old show no deterioration in tint, but rather a softness such as old paintings assume. The introduction of aniline dyes at one time threatened to ruin the manufacture of textile fabrics in Persia, but the law against the employment of aniline dyes enacted by the Persian Government is enforced with rigor.

"The namads or felt carpets of Persia, although produced by a process which perhaps excludes them from the list of strictly textile fabrics, may yet properly be considered in this report. The namad is made by forming a frame of the thickness intended or excavating a place in the ground floor of the size and depth equivalent to the namad intended. Sheep's hair is laid in this and beaten with mallets until the original disjointed mass has obtained cohesion and is reduced to the dimensions of the frame. A design of colored threads is beaten into the upper surface, sometimes quite effective. The material, however, is desirable less for its beauty than the complete sense of comfort which it affords. It is much softer than other carpets, and the sensation to the tread is luxurious. No carpet has ever been manufactured that is more suitable for the comfort of a sleeping room in winter. Of course there is a difference in the quality of these namads, but the finest are far cheaper than the same surface of carpets or rugs woven in the usual style. The great weight and clumsiness of the namads must unfortunately prevent their exportation to any extent until the means of transport are improved. The best quality of namad is made at Isfahan, and the most massive are produced at Yezd. One would imagine that the use of the namad must necessarily be limited. But, on the contrary, the regular Persian carpets rarely equal and never exceed the dimensions of some namads. The namad is more often than the carpets intended to cover an entire floor, elegant rugs being laid over it in places. I have seen a namad seventy-five feet long by nearly forty wide in one place.

"There is one species of rug special to Persia often spoken of, but rarely seen. I refer to the rug made of silk. It is not uncommon to see rugs of the finer types with silk fringes, and sometimes with a woof of silk in the body of the rug. But all-silk rugs are rare, and rarer now than formerly. They are generally small, and intended for luxury rather than use. The price is necessarily very high. The chief of the merchants of Teheran told me of one he had seen over a tomb; it was barely two square yards in size; but he said that 200 tomans, or $300, would be a low price for it."

A Powerful Speech.

I once knew a man who was nominated by his fellow-citizens for a certain office and finally elected without having expended a cent for that purpose. He was very eccentric, but he made a good officer. When he heard that he was nominated, he went up, as he said, into the mountains to do some assessment work on a couple of claims.

He cut loose and didn't get his bearings until a day or two after election. Then he came into town hungry, greasy and ragged, but unpledged.

He found that he was elected, and in answer to a telegram started off for 'Frisco to see a dying relative. He did not go back until the first of January. Then he filed his bond and sailed into the office. He fired several sedentary deputies who had been in the place for twenty years just because they were good "workers." That is, they were good workers at the polls. They saved all their energies for the campaign, and so they only had vitality enough left to draw their salaries during the balance of the two years.

This man raised the county script from sixty to ninety five in less than two years, and still they busted him in the next convention. He was too eccentric. One delegate asked what in Sam Hill would become of the country if every candidate should skin out during the campaign and ruticate in the mountains while the battle was being fought.

Says he, "I am a delegate from the precinct of Rawhide Buttes, and I calkiate that I know what I am talkin' about. Gentlemen of the convention, just suppose that everybody, from the President of the United States down, was to get the nomination and then light out like a house afire and never come back till it was time to file his bond; what's going to become of us common drinkers to whom election is a noasis in the bad lands, an orange grove in the alkali flats?

"Mr. Chairman, there's millions of dollars in this broad land waiting for the high tide of election day to come and float 'em down to where you and I, Mr. Chairman, as well as other parched and patriotic inebriates can get a hold of 'em.

"Gentlemen, we talk about stringency and shrinkage of values, and all such funny business as that; but that's something I don't know a blamed thing about. What I can grapple with is this: If our county officers are worth $30,000, and there are other little after-claps and soft snaps, and walk overs, worth say $10,000, and the boys, say, are willing to do the fair thing, say, blow in fifteen per cent. to the central committee, and what they feel like on the outside, then politics, instead of a burden and a reproach, becomes a pleasing duty, a joyous occasion and a picnic to those whose lives might otherwise be a dreary monotone.

"Mr. Chairman, the past two years has wrecked four campaign saloons, and a timer who socked his wife's fortune into campaign torches, is now in a land where torchlights is no good. Overcome by a dull market, a financial depression and a reserved seated committee, he ate a package of Rough on Rats, and passed up the flume. He is now at rest over yonder.

"Such disasters would be common if we encourage the eccentric economy of official drinks. It is an evil that is gnawing at the vitals of the republic. We must squeeze it or get left. There are millions of dollars in this country, Mr. Chairman, that if we keep it out of the campaign, will get into the hands of the working classes, and then you and I Mr. Chairman, and gentlemen of the convention, can starve to death. Keep the campaign money away from the soulless hired men, gentlemen, or good-bye Joe.

"Mr. Chairman, excuse my emotion. It is almighty seldom that I make a speech, but when I do I strive to get there with both feet. We must either work the campaign funds into their legitimate channels, or every blamed patriotic whistle of the sound of my voice will have to fasten on a thistle and rustle for angle worms against the hens. You hear me?"

[Terrible applause, during which the delicate odor of enthusiasm was noticed on the breath of the entire delegation.]

The Mile of [illegible] of Improvement.

The Montreal ice palace is to cost only $6,000.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 28, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

Heath's bill providing for a constitutional amendment that railroads shall pay a tax of 5½ per cent upon their gross earnings, was passed in the Assembly by a vote of 67 for to 10 against.

The Grand Jury of San Francisco have indicted Geo. W. Tyler, Max Gumpel and John McLaughlin for the embezzlement of $25,000 from Wm Sharon. Their bail was fixed at $10,000. McLaughlin's whereabouts is unknown.

THE Legislature of Nevada has passed a tax roll bill. It was a Senate bill providing that the taxes paid by each taxpayer should be advertised. The House amended the bill so that the total amount on which the tax was levied should be printed on sheets, and a copy mailed to each taxpayer by the Assessor. The amendment is a good one, and insures the bill reaching the eye of many persons who do not take newspapers. The plan will enable each taxpayer to see at a glance who of his neighbors are evading taxation and committing a perjury to do it.

THE Bridgeport *Chronicle Union*, in reference to the proposed reduction of salaries of officers of Mono county says: "In this connection we will remark that there is no intelligent taxpayer in this county in favor of a lower salary (District Attorney) than $1,500 a year. The salary of Auditor—$200—is disgracefully small for one of the most important officers of this county. The Auditor is the book-keeper of the county and should receive a respectable compensation. The Recorder's salary is also too small. It should not be less than $1,200. We do not believe in high salaries, but officers should receive a fair compensation for their services. The number of Supervisors should be reduced to three. Half of the counties in this State have no more use for five Supervisors than a dog has for two tails.

THERE is talk of calling an extra session of the Legislature. The constitutional term of the present session is nearly ended, and yet very little has been done, though much of the utmost importance requires to be done. The subject of irrigation is the most important that has ever come before a Legislature in this state; legislation is urgently needed, but the present body seems incapable of understanding either the importance or the needs of the subject. To call these men together in extra session, would show a want of wisdom in the Governor equal to their own. The Speaker of the Assembly, Mr. Parks, sought election to the Legislature, and to his present position, for one purpose only, to secure the passage of a bill for the payment of the brush dams claims. To the accomplishment of this end he gave all his energies, and having secured the appropriation of nearly a quarter of a million of dollars, he has but little interest in any other legislation. Since the adoption of the present constitution, few extra Sessions of the Legislature have been held; both were utterly unproductive of any good. There is not the slightest reason to hope that the present members would prove any wiser or better in extra session than their predecessors. But it is hardly necessary to multiply words on the subject, the one experience of Governor Stoneman with an extra session was surely enough to deter him from a repetition of the experiment.

EVERY county in the State is asking to have some change made in the County Governments bill, where it relates to the salaries of county officers. No more troublesome matter than fixing salaries of county officers comes before a Legislature, as all who have had anything to do with legislation will admit. This will continue so long as the present method of fixing salaries continues. In our federal system, Congress leaves all matters that concerns states only, to be regulated by state authority. This principal ought to be carried farther and the state ought to leave matters that concern counties only, to be settled by county authority. With very few exceptions only one man in a whole Legislature is sufficiently informed of the needs and resources of a county to be able to fix salaries in proportion to the amount of work to be done and the ability of the people to pay: yet each of the other members has equal power with this one in each case to determine what salary shall be paid. Confusion and dissatisfaction are all that need be looked for under such a system. The Board of Supervisors in each county ought to fix the salaries of county officers. What salary each county shall pay to its officers is not a matter that need concern the state at large, and the Supervisors have better means of knowing what amount of work is to be done in each office, and what the people can afford to pay for doing it, than a Legislature gathered up from all parts of the State.

SENATOR Reddy is endeavoring to push through the Legislature a bill abolishing property qualifications for Jurors. With the law as it now stands there is difficulty enough in getting Jurors from which Justice can be had, more especially in criminal cases. Should the proposed measure become law, it might be well nigh impossible to secure conviction for any crime, as attorneys for the defense could have a jury, every member of whom would be in full sympathy with the accused, or the subservant creature of the attorneys themselves. The proposed measure is a bad one.

IN an article on railroads in connection with Los Angeles, the *Express* says: "The projected extension of the Utah Southern via the A. & P. to this city, a bee line through Kern and Inyo counties to a connection with the Central Pacific at Reno, Nevada, and a coast road from Los Angeles through the Santa Clara valley to San Buenaventura, Santa Barbara, etc., are all practicable projects and of such weighty importance to the commercial welfare of Los Angeles, that vigorous and persistent efforts should be made to secure them." The "bee line through Kern and Inyo counties" means an extension of the C. & C. railroad.

Two Strange People.

Georgia is just now interested in two most peculiar personages. One is a living skeleton residing near Reno, Harbersham County. He is twenty-two years of age, is fully six feet in height, and only weighs thirty-six pounds in his clothes. The skin clings so closely to his bones that it has taken their shape and configuration in every part of his body. He is in perfect health and has never had a day of sickness. At the age of fifteen he only weighed thirty-two pounds. He eats with avidity, but his food is only half digested. He has a perfect horror of himself, and never leaves his home. He is the son of an excellent citizen, and his father and mother humor him in his every wish. The other erratic individual lives in one of the upper counties of the State, and always feels himself as if he was in the frigid instead of the temperate zone. Even in the hottest days of summer he wears all the clothing possible to protect him from the imagined cold. He was never wet by a rain in his life, and never goes out at night without sheltering himself with an umbrella from the dew. No part of his food is ever eaten cold, and he often remarks that it is all he can do to keep himself from freezing. He is always seen on the streets clad in a heavy overcoat.—*Atlanta Constitution.*

Edwin Forrest.

Mr. Forrest has ever been noted for forcible acting, and we are indebted to an admirer for this illustration of it. Mr. Forrest, being on a tour, complained in warm language to the supers that they had not the night before attacked him with the spirit and courage soldiers would have shown in classic times—he, Forrest, being a Roman warrior. Mr. Forrest stormed and threatened; the supers sulked and consulted. At length the captain of the supers inquired in his local slang: "Yer wants this ter be a bully fight, eh?" "I do," replied Mr. Forrest. "All right," rejoined the captain, and the rehearsal quietly proceeded. In the evening the little theatre was crowded, and Mr. Forrest was enthusiastically received. When the fighting scene occurred, the great tragedian took the center of the stage, and the six minions entered rapidly and deployed in skirmishing order. At the cue, "Seize him!" one minion assumed a pugilistic attitude, and struck a blow straight from the shoulder upon the prominent nose of the Roman hero; another raised him about six inches from the stage by a well-directed kick, and the others made ready to rush in for a decisive tussle. For a moment Mr. Forrest stood astounded, his broad chest heaving with rage, his great eyes flashing fire, his sturdy legs planted like columns upon the stage. Then came the few minutes of powerful acting, at the end of which one super was seen striking head foremost in the base drum of the orchestra, four were having their wounds dressed in the green room, and one, finding himself in the flies, rushed out upon the roof of the theatre, and shouted "Fire!" at the top of his voice; while Mr. Forrest, called before the curtain, bowed his thanks pantingly to the applauding audience, who looked upon the whole affair as a part of the piece, and "had never seen Forrest act so splendidly."

A New Use for the Telephone.

Some time ago William J. Brown was discharged from the employ of a lumber firm in Brooklyn. Brown did not seek other employment, but concluded to make a living by the use of the telephone. He called up his old employers and ordered 900 feet of lumber, to be sent to T. A. Remsen's carpenter shop, at the corner of Atlantic avenue and St. James Place. He met the truckman near Remsen's, saying that he was Mr Remsen's son, and ordered the man to unload the timber in a vacant lot. The truckman, having been given a receipt for the load, did as he was ordered. Mr. Brown had the lumber removed by another truckman in the afternoon. The fraud was not discovered until a bill for the lumber was sent to Mr. Remsen, and in the meantime Brown, by an industrious use of the telephone, had swindled a number of Brooklyn business men in the same way.

A young widow, in erecting a monument to the "dear departed," cleverly availed herself of the opportunity to inscribe on the tomb: "Sacred to the memory of Mathusin Benuchet, who departed this life aged 68 years, regretting the necessity of parting from the most charming and best of women."

The Thimble.

The thimble is a Dutch invention that was first brought to England in 1695 by one John Lofting, who began its manufacture at Islington, near London, gaining thereby both honor and profit. It name was derived from the words thum and bell, being for a long time called thumble, and only lately thimble. Old records say that thimbles were first worne upon the thumbs; but we can scarcely conceive how they could be of much use there. To merly they were made of brass and iron only, but of late years steel, silver, gold, horn, ivory and even pearl and glass have been used for making thimbles. I saw some very beautiful ones in China that were exquisitely carved, of pearl, and bound with gold, and the end also of gold. These pearl thimbles are quite as costly and far prettier than those made entirely of gold. Usually there is a pearl sheath for the scisors, and a dainty needlebook of pearl, edged with gold, to accompany the thimble, and the whole is inclosed in an exquisite little pocket case shaped like a book and bound in satin and pearl.

A thimble owned by the queen-consort of Siam is shaped like a lotus bud, this being the royal flower of that country, and almost everything about the court bearing, in a greater or less degree, some impress of the lotus. This thimble is of gold, thickly studded with diamonds that are so arranged as to form the lady's name and the date of her marriage. It was a bridal gift from the king, who, having seen the English and American ladies at his court using thimble, took the method of introducing them among his own people.

In Naples, very pretty thimbles composed of lava from Mount Vesuvius are occasionally sold, but rather as curiosities than for real utility, being, from the extreme bittleness of the lava, very easily broken. I have heard also of thimbles made of asphaltum from the Dead Sea, and of one composed of a fragment of the old elm tree at Cambridge, Mass., under which General Washington stood when taking command of the United States army in July, 1775; but I do not suppose that any of them were ever introduced to be used in sewing.

In the ordinary manufacture of gold and silver thimbles, thin plates of the metal are introduced into a die and then punched into shape. But in Paris the French have a way of their own, quite different from ours, for making gold thimbles that are said to be much more durable than those made in the usual way. Pieces of very thin sheet-iron are cut into disks of about two inches in diameter. These, after being heated to redness, are struck by means of a punch into a succession of holes of gradually increasing depth to give the proper shape. The thimble is then trimmed, polished and indented around its outer surface with tiny holes. It is next converted into steel by a process called cementation, then tempered, scoured and brought to a blue color. After this is complete a thin sheet of gold is introduced into the interior and fastened to the steel by a manuel, which gold leaf is attached firmly by pressure to the outside, the edge being seamed in a small groove made to receive them. This completes the operation, and turns out a very beautiful thimble that will last for years. The steel used in its construction will scarcely wear out in a long lifetime, and the gold, if worn away, is easily replaced.

Rousting the Rodents.

The miller who has made use of vermin powders, steel traps and bull terries, and has yet to rid his premises of rats, will be glad to know that a contributor to a recent number of Chambers' Journal drove away a large colony of these rodents from an ancient house by the following simple expedient: He trapped two rats alive, smeared them all over with tar, the head excepted, and then turned them loose into their favorite run. It is to be presumed that the victims were able to make their unpleasant experiance known to their companions, for we are assured that from that day in 1875 to the day of writing in 1883 not a single rat has been seen or heard in the house. It should be added that before trying a personal application, the writer has poured tar into the rat holes and put broken glass in the same places without any good results.

An Illinois correspondent of an exchange has been successful in catching rats with a trap of his own contrivance. The trap consists of a sheet-iron pipe with a sort of rim on both ends and a strong two-bushel sack tied firmly around one end. Every hole is stopped in the corn-crib but one, which opens into a feed box on the other side of the partition. Then the pipe is placed in the feed box and fitted, the open end firmly over the hole, allowing the sack to hang over the edge of the box into the manger. The trap prepared, the door of the crib is left open and the rats permitted to have their own way for an hour or so. Then the door is shut and a noise made to frighten the rats. Having but one means of escape they rush into the pipe and down into the sack. This correspondent caught twenty-seven rats the first time he tried his trap.

Close Financiering.

"What is the wooden box for, sir?" asked the new stockholder of the President of the just organized bank.

"That? Oh, that's for the securities and money, you know. We must have some place to keep them," replied the practical President.

"Why, certainly: I know that," replied the stockholder, "but ain't you going to have a safe?"

"No, there's no use in going into foolish expenses," placidly replied the President.

"What, no safe?"

"Why, no. When the cashiers go to Canada they always take the combination with them, and you can't realize anything on a second-hand safe with a busted lock."

Gems of Thought.

Nothing so cements and holds together in union all the parts of a society as faith or credit; which can never be kept up, unless men are under some force or necessity of honesty paying what they owe to one another. —Cicero.

What a vast deal of time and ease that man gains who is not troubled with the spirit of impertinent curiosity about others; who lets his neighbor's thoughts and behavior alone; who confines his inspections to himself, and cares chiefly for his own duty and conscience.—Lavater.

The only way for a rich man to be healthy is by exercise and abstinence, to live as if he was poor; which are esteemed the worst parts of poverty. —Sir W. Temple.

We can be thankful to a friend for a few acres, or a little money, and yet for the freedom and command of the whole earth, and for the great benefits of our being, our life, health and reason, we look upon ourselves as under no obligations.—Seneca.

Nothing hinders the constant agreement of people who live together but vanity and selfishness. Let the spirit of humility and benevolence prevail and discord and disagreement would be banished from the household.—Colton.

Defect in manners is usually the defect of fine perceptions. Elegance comes of no breeding, but of birth.—Emerson.

There should be, methinks, as little merit in loving a woman for her beauty as in loving a man for his property; both being equally subject to chance.—Lyte.

The opinions of English manufacturers appear to vary considerably in regard to the qualities that steel castings should possess in order to fit them for safely replacing the main forgings now used in steamships. By some the opinion is held that a uniform cooling of the original casting is the only means of insuring molecular equilibrium. Other makers think that this cooling cannot be so uniformly performed as to leave the casting free from internal strains, which latter can only be got rid of by careful annealing, this annealing consisting in slowly raising the temperature of the casting to a bright red heat, keeping it at that temperature for a time, and slowly cooling it. Again, some attach great importance to tempering castings in oil, in addition to annealing, so as to give them greater ductility. The first operation transforms the large crystalline grain of the metal into a finer and more homogeneous grain, and each repetition adds to the homogeneity, tenacity, and ductility.

Some sixty years since a Bank of England £5 note was paid into a Liverpool merchant's office in the ordinary course of business. On holding it up to the light to test its genuineness, the cashier saw some faint red marks upon it. Examining it more closely, he traced some half-effaced words between the printed lines and upon the margin of the note, written, apparently, in blood. After a long and minute scrutiny, he made out the words: "If this note shall fall into the hands of John Dean, of Longhill, near Carlisle, he will learn hereby that his brother is languishing a prisoner in Algiers." The merchant immediately communicated with Mr. Dean, and he lost no time in bringing the matter before the Government. Inquiries were set on foot, and the unfortunate man was discovered and ransomed. He had been a slave to the Dey of Algiers for eleven years when the message he had traced with a splinter of wood dipped in his own blood reached the Liverpool counting house.—*Pearson's Herald.*

Prof. Selwyn, of the Canadian Geological Survey, is said to have recently stated that the story about the great lake in the Hudson Bay territory was a hoax, because Lake Mistassini had been surveyed in 1871 and was referred to in the geological reports of that year. But the commander of the supply party asserts that the great lake lies beyond the lake of which Prof. Selwyn speaks, and it seems probable that the professor has been misled by a belief that the supply party had rediscovered the small lake.

Miss Maud Banks, the daughter of Gen. N. P. Banks, has announced her intention of going on the stage because she saw her lithograph displayed in saloon windows in Boston. If the lithograph is a correct likeness we should think it would be the saloon keeper's place to kick.

Thirteen young ladies in Newark, N. J., have pledged themselves not to kiss young men who use tobacco. The remaining 1,215 girls will continue to kiss anybody they get a chance to.

MISCELLANEOUS.

REWARD!

I, THE UNDERSIGNED, WILL PAY, IN U. S. gold coin, the sum of $150 for the arrest and conviction of any persons stealing any of my stock in California or Nevada.

[apr19-1y] FRANK SHAW.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No 221, F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensuing Masonic year as follows:

Saturday.....January 24th
" .....February 28th
" .....March 28th
" .....April 25th
" .....May 23d
" .....June 27th
" .....July 25th
" .....August 22d
" .....September 19th
" .....October 17th
" .....November 21st
" .....December 19th

Members and visiting brethren are cordially invited to attend.

JOHN W. P. LAIRD, W. M.

J. E. PARKER, Secretary. dec29-1y

BREWERIES.

The Pioneer Brewery.

INDEPENDENCE, CAL.,

JOS. FERNBACH, Prop'r.

LARGEST, MOST COMPLETE AND FINEST Brewery on this side of the Sierras. Having thoroughly refitted the entire establishment, introduced new improvements and secured the services of one of the best practical brewers on the Coast, the undersigned is prepared to supply the public with the PUREST AND BEST QUALITY OF BEER, by the

KEG, BOTTLE OR QUART.

Prompt attention given to all orders.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, FEBRUARY 28,..... 1885.

—Peach and Apricot trees are now in blossom in various parts of Owens valley.

—It looks as if the Legislature of Illinois will not be able to elect a United States Senator; day after day there is no change in the vote.

—A new mining district has been formed near Bishop Creek, it includes the ground where the recent discoveries were made by Freeman and Coats.

—John, W. Satterwhite, an ex-State Senator died at his home in San Barnardino last week. Mr. Satterwhite was a member of the first Senate that was elected under the present Constitution.

—The editors of two papers published in Bodie are abusing each other most bitterly. The business of the town has so far declined that there is not good support for even one paper; hence the abuse. Disapointment, worry, the pinch of poverty, make men peevish and abusive.

BIG EXCITEMENT.—The is reported to be big excitement at Bishop Creek over recent mining discoveries. Every body is rushing to make locations, and already many prospective fortunes have been made.

INCORPORATED.—The Owens Lake Mill and mining Company has been incorporated. The Board of Directors of the Company consist of the following; J. M. Keeler, M. T Cole; William Thomas; W. F. Burbbank; W. W. Chiskery; George T. Hawley. The capital stock of the company is $100,000.

RANCH FOR SALE.—The ranch known as D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches, good grain land, a large area seeded to alfalfa. Apply to

HARRIS & RHINE,
Independence.

SUPERIOR COURT.—Last Thursday morning the case of Spencer, versus Drake and Adle, came up on appeal. The respondent sued the appellant for a reward of $200, off red for the capture of Jones and Shuck. Judgment for the amount claimed was given by the Justice at Bishop Creek. Spencer appealed to the Superior Court. Argument by counsel was continued up till last night. Gill and Forbes Attorney for Drake and Adle; Laird Attorney for Spencer.

A HOT REGION.—William Sparks, who had been employed at the borax works at Death Valley, came up from that hot region last Monday. The thermometer, for several days before he left, marked 120 in the shade at midday. He hired an Indian to pilot him through the mountains to Darwin, and made the trip in two days. The average daily yield of borax at the works is about eleven thousand pounds. Thirteen white men are employed, and twenty nine Chinamen. Mr. Sparks got sick, and was forced to leave for the benefit of his health.

A Card

Now, in the expectation of soon departing from Independence for a new home at Bishop Creek, we, as a most pleasant duty, hereby acknowledge our great obligation to the good people of this locality for the many proofs of their real friendship and kindly consideration, maintained unbroken for full half a generation agone. We are especially grateful to that goodly company of old friends as well as newer for the honor of their "grand surprise" last Tuesday evening. And, with feelings of highest appreciation for the beautiful and valuable tokens of remembrance bestowed on that occasion by lady friends upon Mrs. C., we, for all this, shall ever cherish naught but kindliest memories for each and all.

In deep regret at this severance of neighborly associations of such long standing, we remain, in true friendship,

MR. AND MRS. P. A. CHALFANT.

Property Transfers.

Ellen Matlack to J. Elkeles, lot in Bishop Creek; consideration $200.

Victoria Otero to Manuela Diaz, house and lot in Lone Pine; consideration, $200.

Patrick Downs to J. D. Mairs; mining claim in Fish Spring district, consideration, $50.

George Blazer to W. J. Dunn, two lots and improvements in Bishop Creek; consideration, $700.

W. J. Dunn to Joseph Shelley, lot in Bishop Creek; consideration $75.

W. H. Nesler, United States patent, ranch near Lone Pine.

Henry Fehrman, United States patent, ranch at Fort Independence.

J. L. C. Sherwin and Nannie E. Sherwin to William T. Sherwin, ranch in Round Valley, consideration $500.

Catherine McNally to B. F. Theban, interest in McNally ditch, consideration $250.

Warren Barlow to Chas. M. Green, ranch near Independence depot; consideration $900.

V. G. Thompson, administrator of G. C. Gracey, deceased, to Joseph McNally, interest in McNally ditch, consideration, $50.

Lyman Tuttle to Harris & Rhine, interest in Indiana mine; consideration $1.

H. M. Yerington to W. O. Moroney, lot in Bishop Creek, consideration $75.

David Garland and Elizabeth Garland to George Collins, interest in McKown Ditch, consideration, $140.

W. J. Lake to F. Lawrence, town in Independence, consideration, $400.

Thomas Furbee and Katie Furbee to C. B. Rawson, Furbee ranch, consideration $5.

THE DIAMOND.

The match game between the Haymakers and Jute Back baseball clubs was played at Bishop Creek February 20th. It was a fair day and everything favorable for an interesting game. The Jute Backs of Bishop Creek, challenged the Haymakers of Big Pine. The latter answered and met them on their own diamond. The game commenced and was witnessed by a large crowd. The name, position, and number of tallies made by each player were recorded by the scorers as follows:

HAYMAKERS.		JUTE BACKS.	
J. Schalten, RF,	6	E. Schober, RF	6
C. F. Fuller, LF	7	V. Smith, SB	3
C. McMurry, CF	6	J. StoutenbrhFB	2
H. Steward, P	6	J. McNally, CF	3
R. P. Hessian, C	4	H. Preston, TB	5
W. McMurry TB	4	Robt. Peeler, SS	4
L. L. Burt, SB,	6	L. Merrill, P	1
W. Schalten SS,	6	G. Huckaby, LF	4
H. Hamilton FR	5	Joe Lopez, C	4
Total	50	Total	29

Considerable applause frequently displayed the interest manifested by the spectators. Big Pine was well represented and Bishop Creek equally so. The Jute Backs took their defeat in that quiet and pleasant way which marked all the members of the nine as gentlemen. They were desirous of winning the game, and when defeated were equally zealous of making our boys feel at home. And all the Big Piners feel that Bishop Creek is a hospitable place to visit. Of course on such occasions there are always a few little curs that snap at their own tails, and the only result is that they form a little circle of their own, and cannot injure anyone else, and as a 'matter of course' are almost unworthy of notice. But everything passed off nicely. We were sorry that the Jute Backs were not uniformed, for then the game would have been a prettier sight. The contrast of bright uniforms add much to the interest of players as well as to the admiration of spectators. The Big Pine boys were clad in red, white and blue uniforms as follows: Shirts and neckerchiefs, white; knickerbockers, red; stockings, belts and caps, blue. In addition each player's cap bore the initial letters of his position. At the close of the game the Captain of the Haymakers proposed three cheers for the Jute Backs, which were given with a determined will and a tiger. Forming in procession they all returned to town to prepare for the evenings entertainment,

THE GRAND BALL,

Which was a very enjoyable event. The very best musical talent was secured and everything arranged in elite order. The supper apropos, and thanks to the management of Messrs. McDonald & Riddle, ball and supper were well worthy appreciation. Everyone wishing to dance did so until tired out. An effort was ever made by our hosts that guests should not want for partners nor for room on the floor. Our boys returned to Big Pine glad of success delighted with their visit. May like occasions return to the near future.

TO PLAY AGAIN.

The Jute Backs are to play the Haymakers at Big Pine on the 17th of March under the same conditions as the last game. We know it will be a matter of interest.

IN OUR CLUB.

A fact to be mentioned is the service rendered by two of our Nine to whom especial thanks are due; H. Hamilton and C. F. Fuller, both of whom inconvenienced themselves greatly in order to be with us; receiving no remuneration save that of sharing the fate of "Haymakers." And last but not least, to the young ladies who so so kindly assisted the boys making uniforms we tender our sincere thanks.

With hopes for the coming "gala day"—more anon; WADE.

Personal Mention.

Bob Carrasco made a Jay Eye-See trip to Independence yesterday.

P. W. Forbs, Attorney at Law, came down from Bishop Creek last Wednesday, and stand till Saturday.

Constable George Drake came down from Bishop Creek last Wednesday and stayed in Independence a few days.

Miss Sarah James ran a large brass pin into her thumb some days ago; great pain and inflamation have resulted.

Joseph Schalten came down from Big Pine last Saturday, and has been under treatment from Doctor Blair all the week for asthma. He is much better

WELL DESERVED.—Never was a compliment better deserved than that to Bertrand Rhine, in the farewell party given in his honor. Bert was always foremost in every thing to promote social pleasure during his whole stay in Independence, and when the time came that he must leave us, it was at once felt by all that a party should be given in his honor. Miss Emma Flowers and Mrs. Matlack took the matter in charge, and all the other ladies in Independence so heartily seconded their efforts that the affair was a grand success. Mair's hal was filled by the company; the stage curtain was festooned with evergreens, and in the middle of it was formed with flowers "Farewell Bert." Dancing began about nine o'clock; a little before midnight supper was served; at the table kind and feeling words were spoken; Bert attempted to reply, but broke down completely, and could utter nothing more than a few inarticulate sobs. After supper dancing was resumed, and continued till near daylight. Next morning Bert left for San Francisco, where, if kind wishes could secure it, happiness would surely await him.

FAIR PLAY

Interesting Conundrums Offered For Solution

Editor Inyo Independent;—Feeling a touch of the scribbling itch, I yield to the impulse and send you my first communication, in order to ask a few questions.

From time to time I see in the colums of the *Inyo* communications making a big fuss about some one selling whiskey to the Indians. Why should not the Indian buy whiskey and get drunk if he wants to, as well as the white man.? It is less shameful in a savage than in a civilized man to do so. Many Indians are citizens, they enter government land and pay taxes; they have a right to buy scythes, knives, razors, powder, shot and guns, and in fact do buy these articles and no fault is found. Then why should they not buy a little whiskey from a rum seller, as well as these articles from merchants or land from Uncle Sam.? Again, why should not the Indian who robs or murders a fellow Indian be punished by law, when the injured man may be a citizen of the United States and a taxpayer of the county? It is wrong to sell whiskey to an Indian, it can not be right to sell it to a white man, and if the seller may be punished for selling it to the one, he aught also to be punished for selling it to the other. All laws are made on general principles, and for the protection of all people alike, and if administred in the same spirit will teach the Indian the true meaning of law, and lead them to civilization. It may be argued that a drunken Indian is more dangerous than a drunken white man; but in my estimation one is as dangerous as the other; a white man drunk is "all same Piute" drunk to me. I learned from the last *Inyo* that the bill for the reduction of salaries of county officers was moving ahead in the Legislature. So far as the Salary to District Attorney is concerned, I would prefer to see it raised, rather than lowered. We ought to take example from all intelligent Governments the world over, and the rule with them is to secure for the public service the best talent by offering liberal salaries. This I consider wise economy. A poor attorney may be willing to accept poor pay, and this might also suit attorney's employed against the people; but in one case tried under such conditions such expense might be thrown upon the county as would pay a liberal salary for a whole year to a competent attorney.

Again I would inquire, has a Road Overseer lawful authority to consent to the opening of a new county road within his district, and to permit the fencing up of a road already existing, and this, too, before a petition has been presented to the Board of Supervisors, or any sanction given by that body for such action by the Overseer.? If officers do not observe the laws in the discharge of their duties, and if neglect to do so is suff red to pass without rebuke, need it be expected that private persons will be scrupulous in their observance of law.? Order is said to be the first law of heaven, but whether this be so or not, the observance of law ought to distinguish all officers under the law.

NO MATTER WHO.

AROUND KEELER

Thomas Boland has fifteen men employed at Cerro Gordo, they are getting out a great deal of ore, all of which will be shipped to Selby and Company, San Francisco.

Competent judges say that within easy reach of the Hawley mill there are tens of thousands of tons of ore containing twenty five dollars per ton in silver and gold: and claim that with proper management it can be worked in the mill at a fair profit.

From the Jim mine at Darwin J. S. Gorman is now getting out ore of good quality; teams are hauling the ore to the furnace, and a run will be made soon.

The Nevada Salt and Borax Company are making an interesting experiment at Keeler. The water of Owens Lake carries a very large per centage of soda in its various combinations, and the aim of the company is to get the soda from the water and use it in making borax. A number of vats are dug in the ground close to the edge of the lake; these vats are seventy five feet long and thirty feet wide; water is pumped into them from the lake and kept at a depth of about eighteen inches. The daily evaporation is nearly three inches, and the quanity pumped into the vats daily is equal. At the end of six months the vats will be allowed to dry out and the soda will be gathered. The prosess has not yet been in operation long enough to determine whether it will be a success or not. Mr. James Stansbury is in charge of the work.

A branch of the signal service has been established at Keeler, Mr. John Grover is the officer in charge, and arrived lately from Prescot Arizona, where he had been on similar duty for some time. Reports of atmospheric conditions will be made three times daily to San Francisco all the year round.

Washington's birth day party last Monday evening affordd all the pleasure that was expected by the visitors, indeed their highest expectations were exceeded. The new hotel is a model of neatness, and Mr. and Mrs. Burns did all that was possible for the entertainment of their guests. The train took down a large number of people from Independence and Lone Pine, and many more went from other places by other means of conveyance. Soon after the company assembled, Hon. J. M. Keeler was introduced and made a brief but pithy and eloquent speech in honor of him whose national day the company had meet to celebrate. At the conclusion of Mr. Keeler's address dancing was begun and continued till after day light next morning, the company only resting long enough to eat a first rate supper, and occasionaly to listen to a song by one of their number. The affair was a complete success, and has started off the Lake View House with a first rate reputation.

During a recent visit to Wild Rose district, Mr. Day made an extended examination of the mines there. There are twelve mines now known and partially opened, and all have ore that would be considered high grade, even in the most noted mining districts of the Pacific coast. The ledge now opened run all the way from three to fifty feet wide, much of the ore runs up into the thousands of dollars per ton; but there is good reason to believe that all now in sight would average at least sixty dollars per ton. This new district promises to be a valuable mining field.

NEW ADVERTISEMENTS.

NOTICE TO CREDITORS.

IN THE SUPERIOR COURT of the County of Inyo, State of California. In the matter of the estate of W. A. Baker, deceased. Order of Publication of Notice to Creditors.

IT IS ORDERED, That notice to the creditors of W. A. Baker, deceased, be given by publication in the INYO INDEPENDENT, a newspaper printed and published in the County of Inyo, at least once a week for four weeks. Dated February 24, 1885. JOHN C. HANNAH, Judge of Superior Court.

ESTATE OF W. A. BAKER, DECEASED. Notice is hereby given by the undersigned Executrix of the estate of William A. Baker deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Executrix, at her residence at Big Pine, in the county of Inyo.

Dated, February 24, 1885.

FANNIE F. BAKER,
Executrix of the Estate of W. A. Baker, deceased.

ALIAS SUMMONS.

IN THE SUPERIOR COURT OF THE COUNTY of Inyo, State of California.

I. A. CHARRIS and N. THAYRINE, Partners doing business under the firm name and style of CHARRIS & RHINE, Plaintiffs,

vs.

S. S. BARNE, E. SIMMONS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant.

Action brought in the Superior Court of the county of Inyo, state of California, and the Complaint filed in the office of the clerk of said County.

LEDDY & CONNIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barne, E. Simmons and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiffs, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service) after the service on you of this summons—if served within this county, or within thirty days if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty seven dollars being balance due on an account stated and for money advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs of the value and of the price and reasonable worth thereof, at special instance and request, between the 1st day of January, 1884, and the 20th day of September, 1884, the aggregate sum of which is $527.20, upon which there has been paid the sum of $200, leaving a balance of $327.20 due and owing, and for which sum with interest upon the same from the time of the demand hereof, to which time plaintiffs have accrued costs of suit.

And you are hereby notified that if you fail to appear and answer said complaint as above required, the said plaintiffs will take judgment against you for the said sum of $527.20 (five hundred and twenty seven dollars) and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California, this 24th day of February, in the year of our Lord one thousand eight hundred and eighty five.

J. HUNTER, Clerk.

INDEPENDENCE, CAL.:

SATURDAY, FEBRUARY 28,.....1885.

Nerve of an Elephant Hunter.

The coolest thing I ever saw done in elephant shooting was one day myself and a friend were sitting in the bungalow, when a coolie rushed in and informed us that there was an elephant in the office. The only "battery" we had in the bungalow, which was merely a wooden shanty run up for temporary shelter in a new clearing, was an old percussion shotgun, used chiefly for firing "sparrow hail" at the legs of natives caught for coffee stealing at night, and the only bullets we had, if I may be pardoned the "bull," were small shot with a few swan shot mixed. There was, however, a bullet mould which filled the gun, so we set to work and cast some rough bullets, as we were determined to have a shot at the elephant even if it was with a pistol. Our next proceeding was to toss up who should have the shot, and it fell to my friend J.

When we went out it was found that the elephant was not in the office, but on a strip of "patna," or grass, alongside of it. J according went down to the tournament, while I stood at a safe distance to cheer on the knight. When J. got on the "patna," he saw that the brute he was going against was evidently a "roque" of the worst description, as he began to trumpet very loud. This is the first thing a "roque" does. I suppose he thinks he will put the fear of death in the hunter. The next part of the show is for Jumbo to charge right down on you, still trumpeting and waving his trunk until he comes within about twenty yards, when down goes the trunk, and at the same time, he lowers his head. This is the time to fire, and the only place you have any chance of bringing him down by hitting is a small oval space just above the trunk. This is a vital spot, and if you hit this it is sure death to the elephant. J. was an old hunter, so he calmly awaited Mr. Jumbo's approach. Just at the right moment up went his gun to his shoulder, and I awaited breathlessly to see the flash and behold the roque fall. But no flash came, and presently I saw J. running backward facing the elephant, and evidently feeling in his pockets for something. The explanation was now easy, the internal precussion cap had missed fire! Luckily he had another, and in a moment, just as the elephant was upon him, I saw his gun again go up. There was a flash, then a report, and down tumbled the huge beast just at J's feet; in fact so close was he that he had to jump aside to prevent the body falling on him. There are few men I know of, and I have met as few men of nerve in my time, that would have the coolness to run backward in face of a charging elephant, remove the old cap and feel in his pockets for a new one, and then kill his quarry. I know of nothing more inclined to make one run the first time of trying than to wait on an elephant which is charging, but a better spirit comes over you and you shoot without a tremor.

It Don't Console.

Mr. Noodle was a great bore to all the girls of his acquaintance, and he knew he had the reputation of being a fool but thought one girl in particular held to a different opinion. One evening he was talking to her.

"Miss Susie," he said, "you know all the girls think I'm a fool."

"Yes, Mr. Noodles, I've heard them say so."

"And they think Harry Alderney is one too, don't they?"

"I've heard them say so, Mr. Noodle."

"Now, Miss Susie, I have every confidence in your judgment, and you don't think I'm as big a fool as he is, do you?"

"No, Mr. Noodle, I don't, for Mr. Alderney weighs at least two hundred and you are not nearly as large as that."

Noodle picked up his gloves and hat and went out without saying good night.

Heredity of Character.

The passive forces seem to be more generally transmitted than the active; nature than character. Indirectly, of course, the former is largely the result of the latter, and to say that nature is more capable of hereditary transmission than character may, after all, be reduced to the truism that character is more lasting in its effects when by being repeated by succeeding generations it becomes nature. There is, however, a general fashion of thought that assumes all things undesirable to be hereditary and all admirable traits of character to fade with the individual who has painfully achieved them. Such a belief has no better foundation than many another. The world is bad enough, but it is nothing to what it would be were not good as well and as easily transmitted from one generation to another as is evil.

The Trade in Wooden Shoes.

A factory has just been opened at Danbury, Conn., for the manufacture of wooden shoes. The proprietor is a German, and for some time has supplied the brewers in New York with wooden shoes for their employes, and the demand has now become so extensive as to require much greater facilities and the aid of steam power. The shoes have the approved curved round toe of the old Dutch style and are heelless. They are made wholly of the wood of the butternut tree, and, while impervious to water, are also very light. The have been introduced into all the hat shops for the protection of the feet of operatives from the wet floors, while at the same they are very easy and rest the feet.

Belgium has 641 newspapers and magazines; 70 of the former are daily.

"LOG CABIN" CAMPAIGN.

How Tom Corwin Met His Political Rival's Wife.

There are two stories told of Tom Corwin's meeting the wife of Gov. Shannon, both of which are very funny, but both of which cannot be true. One is that the meeting took place at St. Clairsville, where Shannon was to have a joint discussion with Corwin. In coming to the town Mr. Corwin occupied the same stage with Mrs. Shannon, who did not know him, and who, on account of his sitting in the corner of the stage in a very modest and reserved way, together with his very dark complexion, took him to be a mulatto. She asked him at one of the stations to go and get some milk for her baby which she had with her. Corwin politely did as she requested. She then had him feed the baby and hold it for her the remainder of the trip. As the stage reached the St. Clairsville hotel, she took her infant and handed Corwin a quarter, which he politely but with dignity declined. She suspected nothing, however, as she took her departure. All unconscious of her error, she went that afternoon to see the man who was opposing her husband, and to hear the joint discussion. After surprise can be imagined when she saw upon the platform her dark mulatto servant of the morning, and she was deeply mortified. Shortly after this incident a mass meeting of Thomas Corwin, the Whig candidate for Governor of Ohio.

The other story states that this meeting occurred in a grove near the Columbus, and during this conversation Corwin and a number of his white friends were going from one place to another, and were discussing the situation and having gone over the prospects of Shannon's defeat, when Mrs. Shannon, whom none of them knew, entered the stage at one of the minor stations. She listened to their talk for a few moments, and then gave them to understand that she did not think as they did, that she was the wife of Gov. Shannon, and that there was no doubt of his election. This abashed the several gentlemen for a moment, but Corwin at once recovered himself and soon began conversing with Mrs. Shannon. He was an accomplished conversationalist, and in a short time she thought the dark gentleman with whom she was talking was one of the most polite gentlemen she had ever met. He told her he knew her husband well, and talked at length about him, skillfully parrying all questions which might lead to his giving her any idea of his own identity. They finally got to laughing over the embarrassment, and Mrs. Shannon remarked that it was not possible that such a man as her husband could be beaten by a fellow like Tom Corwin, who, they say, was only a wagon boy when young.

"Yes," said Corwin, "and who goes round the country speaking from a log cabin."

"And," continued Mrs. Shannon, "who is as black as the ace of spades."

"Yes," returned Corwin, "as black as—as black as I am."

So the conversation went on while Tom Corwin complimented her in various ways, taking her baby, which she had with her, in his arms and dandling it and calling it "the young Governor." When they reached Columbus Mr. Corwin carried the baby into the hotel for her, and, as he laid it down, said, "Mrs. Shannon, I am indebted to you for a very pleasant ride. I will now lay down the 'young Governor,' and a few weeks later you will find me laying down your old Governor as well." I have the honor to introduce myself to you as Tom Corwin, the black-faced wagon boy of the present campaign."

History tells how well Corwin succeeded in verifying his prophecy—how he was elected Governor in 1840 and how, five years later, he was sent to the United States Senate, which he left to accept the portfolio of the Treasury.

A Ride on a Whale's Back.

We went out in a gang that day, some with rifles and some with harpoons, and I reckon there was ten boats (boats) all told, and right down by the mouth of the creek we struck a school of 'em so big that there was nothin' but heads a-poppin' up all around. When we got into the lot the boys began a-shootin' an' stickin' and got so mixed up that we didn't know where we was for a while. My boy had my harpoon, and the only thing I could get hold on was a lance, jest like this, and as I was standing in the bow a big wuale came up under me. I let drive and sunk the lance into him about two feet, and at the same moment one of the other boats struck me right amidships. I lost my balance, and afore I knew it I was a-settin' on that ol' whale's back, hangin' on to the pole, and goin' like greased lightnin'. The boys set up a yell and made way for me and off I went.

"Yo see," continued the speaker, "the water was only about four foot and the critter couldn't dive, so I jest clung to it. First she struck in shore, and then skirted along the beach, a-snoodin' and puffin' and beatin' the water with her tail so't you could hear her clear across the bay. But she couldn't shake me off. I jest clung to the handle and let her rip, and pretty soon, when we came to a shoal place, I beached her, or she beached me, I didn't know which. Any way, I reckon I'm the first one that ever rode a whale in these diggins."

"What are you doing, Mary?" asked a Somerville husband, addressing his wife.

"I am sewing on a crazy quilt," she replied:

"Are there any buttons on it?"

"No."

"I thought not," he said: "it wouldn't be like you to be sewing on anything that needed buttons," and drawing a deep sigh he proceeded to fasten his suspenders with a half-burned match.

SALOONS.

IRWIN'S SALOON,

BEAUTY ON EXHIBITION.

Novel Idea of Discovering the Depth of Their Beauty.

Upon a raised platform with a piece of crimson cloth sat seven ladies, contending for a gold medal in a beauty show. The platform was on the left hand side of an oblong hall in Chatham Square. Freaks of nature and representatives from the far-away lands of Africa and Asia, and also several very select specimens, of Sioux Indians, likewise a polar bear, an orang outang and 237 residents of the Bowery and its adjacent territory mixed with the ladies contending for beauty's golden medal.

The one upon whom the manager prided himself the most was a lady, seventeen years old, and she is evidently no younger, who sat on the left of the stage, her short crimson dress harmonizing beautifully with the rosy tint of her cheeks, and her bright silk stockings about her red ribboned boots joining in to give at once a beautiful and costly appearance.

"Dear me," said she, "I do wonder at the effrontery of those other six girls in thinking themselves pretty. Would you believe it, I saw gentlemen voting for them." Her questioner assured her that she must have been mistaken and passed on to No. 2, a demure damsel with blue eyes and black hair, who said: "Would you believe it, those other six girls really think they are going to win the medal. Why, the 'What is it? Only and Original,' has no more show than No. 1."

"Dear, dear, dear," gasped the girl with a placard, announcing to the world that she was No. 3, pinned across her breast, "don't you think No. 1 and 2 are awful. Look at No. 2's stockings. I do believe they are falling down for want of garters.

Miss Millie Armstrong sat near by. She is, according to her own story, and she assured the writer that she never told a lie, the prettiest girl in the show. "I am from San Francisco," she said, as she drew out a delicately scented handkerchief, and you know 'Frisco is noted for pretty girls, and — I am really not lying—I was the prettiest girl in our block." No comments were made upon the block, in fact time had been hardly allowed so to do before Mollie said: "Did you notice the other girls —poor things. I should think they would have better sense than to contend in a beauty show."

"Are you not a little prejudiced?"

"Hush," said the lady in her sweetest tone, "until the manager goes by. I cannot talk to gentlemen —now he's gone. I prejudiced? Why, my dear sir, do you think I am? Just look at the other girls—buy a vote for me, do!"

At this critical juncture, when San Francisco stood a reasonably good chance of being raised to the pinnacle of fame, a charming little damsel entered, threw off a fur-lined circular, chucked a bonnet in a corner, pinned No. 6 upon her breast, cast a defiant glance across her companions and said: "Well, girls, I guess I am going to have something to say about that there medal."

Chorus—Humph!

Girl No. 6.—"Yes, humph, as much as you please, but you can bet your sweet life I ain't getting left when gold medals is flying around. You can paste that on your bangs where you can see it."

No. 1, No. 2 and No. 3—"Well, I guess if you think that you are going to run this here beauty show."

Here the stentorian voice of the manager broke across the hall; "Ladies, remember where you are."

Chorus—Humph.

"Oh, my dear sir," the manager said, "you must stay in the museum and become acquainted with the ladies to understand their petty spites —a really interesting study. Even Queen Victoria has her peculiar ways —ladies, remember where you are!

"The gold medal," continued the manager, "is really a work of art, and I am sure the lady that wins it may be justly proud of her prize. And now, ah! the music starts: come and see the living curiosities—ladies, remember where you are!"

Do not think of knocking out another person's brains because he differs in opinion from you; it would be as rational to knock yourself on the head because you differ from yourself ten years ago.

A ROUGH PLACE.

Why a Young Man Does Not Care to Serve Uncle Sam.

"I don't care to see West Point again," said a young man who, having just returned from the great institution, was asked how he liked the place.

"Oh, yes, the discipline is good, and they take the stoop from a fellows shoulders, still they do not observe those little niceties of politeness which I like to see practiced among gentlemen. I went in with a young fellow named Adams, a youth of good manners, who, I thought, could not fail to make a good impression. We were shown into an office, where I was pleased to meet a lieutenant with whom I was acquainted. He shook hands with me cordially and asked about my relatives. I introduced him to Adams, and he seemed glad to meet him and profoundly acknowledged his gratitude. 'Ah, young gentlemen,' said he, 'so you contemplate joining us. Glad of it. You'll find everything pleasant here. Just sign this please,' shoving out something that looked like a cut throat mortgage. Just as we had signed the thing, the lieutenant, turning to a pug-nose thing who stood near with a gun said: 'Take these fellows down to the commissary department.' Adams and I looked at each other and smiled. 'Get out of here,' demanded the lieutenant. 'Corporal, take 'em away.' We did not like the change in his manner but thinking that such freaks might be among his personal peculiarities we said nothing, but accompanied the corporal down to the commissary department, where we were each furnished with fifteen pairs of shoes, fifteen pairs of boots and about four hundred pairs of socks. Then loaded down with our first spoils, we were conducted into an upper room. 'Fix these things,' said the corporal. 'How fix 'em?' I asked. He stormed at us and told us that if we had not stacked 'em up in shape by the time he got back he would report us.

"He went away, and we went to work to arrange our goods. I thought that my socks were especially well arranged, but when the corporal came back, he gave them a kick and said: 'Fix these things.' I felt like knocking him down, but thinking that I had not got the hang of the place, I restrained my feelings. 'Come on here, now,' said the corporal. We were then shown into a long hall. The corporal left us, and, having given no instructions, we knew not what to do. After awhile Adams remarked, 'I see a lot of tracks leading to that door. Believe I'll go in and ask for directions.' He went into the room but a moment afterwards, came out like a man falling down stairs. Pretty soon after this, we saw, posted on the wall, a couple of sheets of paper. They referred to us, giving us everything but fatherly advice. Well, I concluded to go in. When I entered, a bluff officer looked up and asked:

"'What's your name?'

"'Jackson.'

"'Get out of here!'

"I went back to my bill of instructions and learned that my name was 'Jackson, L. D., sir.' Thought I'd try it again, and went back.

"'What's your name?'

"'Jackson, L. D.'

"'Get out of here.'

"Went back to my bill again and found that I had left off the sir."

"The next time I succeeded, but Adams, I think must have been fired out four times, at least. We soon learned that for the first three months, we were to be known as 'beasts,' and that no cadet would speak to us, and that we were not even allowed to look at one of them. One day I happened to look up at a fellow. Swelling like a toad, he exclaimed: 'Take your slimy eyes off me!'

"I wanted to knock him down, but by this time I had learned to endure insults. There may be places more uncomfortable for beginners, but I wouldn't know where to look for them. They say that the penitentiary is rough, and I suppose it is, but I warrant you that if a West Point 'beast' were to awake some morning and find himself in State's Prison, he would wonder how he came to be thrown into such polite society."

Bishop William Taylor, the Methodist traveling missionary, will probably accept the steam yacht that has been offered him for his enterprises in Africa, India and South America.

From Portsmouth, on August 21st Lieutenant Greely wrote the following letter: "The Army Register is right and I spell my name Greely, although some of my family use the e."

A gang of burglars on Staten Island appointed two of the number to serenade the inmates of a well-furnished house, while the others broke in at the back and robbed the premises.

The Bartholdi statue people appeal to the people of the United States for $125,000 with which to complete the pedestal. If money is not forthcoming in thirty days work will cease.

Since the publication of the fact that Queene Victoria has a fondness for fried hominy, the London hotels have began to print on their bills of fare: "Fried hominy, her majesty's style."

We should endeavor to purchase the good will of all men, and quarrel with no man needlessly; since any man's love may be useful, and every man's hatred is dangerous.

LEPROSY MICROBES.

Recent Investigation by Physicians of the Hawaiian Islands.

A gentleman recently arrived in San Francisco from the Hawaiian Islands states that for the first time in the history of the islands the whites have become thoroughly excited over the subject of leprosy. The disease is increasing rapidly, lepers being frequently seen on the streets of Honolulu, and in all the early stages of the disease. The general opinion has been that the disease is not contagious, but of late those who have closely studied the matter are coming to another conclusion. One of the beliefs is that no American or European of the brunette type can contract the disease, for no case has been known among them. Among the fair-haired Scandinavians, however, the leprosy is prevalent, not only at the islands, but in their native country. This fact has led to the belief that the disease is first engendered by climatic conditions the sanitary condition of the surroundings, and the character of the food eaten. It is a curious fact that the children of lepers often do not develop the disease, while their children do; and in families where there has never been leprosy some of the children become lepers. It will be remembered that a white child suffering from leprosy was brought to San Francisco from the Islands some time ago, and recently died. She was one of three children, all of whom had the disease, contracted, it is believed through vaccinnation.

The physicians on the islands have been giving careful study to the subject, and it is believed that they have discovered the microbe. At any rate, experiments are being made with something that has been discovered, and an effort has been made to cultivate the microbe, that vaccination for leprosy may be practiced. An experiment is now being tried in the case of a condemned criminal, who has been innoculated, and whose case will be carefully studied, in the hope that something definite may be learned concerning the dread disease. So much attention has been given to the subject in Honolulu, and the disease is spreading so fast that the white population, as above stated, has become aroused to the necessity for doing something to protect themselves.

Extreme Economy.

"I don't mind a man being economical," said Colonel Bonely, "but I do despise to see stinginess. You all know John Nutwing—feller that used to sell soda water and grumbled when a customer insisted in taking it with syrup. Well, he was the stingiest man I ever saw. Why, sir, he was so stingy that he used to let his meat spoil. Said he couldn't afford to eat it while it was so valuable. One day a cart came along with a barrel of water. Just as it was passing John's gate, the thing broke down. Well, sir, John went out, caught half the water and poured it in his well. Said that he couldn't afford to see anything wasted. Oh, yes, he was close. I was with him when he died. He was perfectly willing, though he dreaded the expense of having a grave dug. 'Colonel,' said he, addressing me in that anxious way that had become one of his characteristics, 'can't you git some of the boys and induce 'em to dig the grave as a matter of accommodation? I did intend to be buried under the great pear tree, but the land is so valuable I can't afford it.' 'You don't seem to be very sick,' said I. 'Perhaps you may recover.' 'Oh, no, I'm gone,' he replied. 'I took poison just before sending for you. I decided that I could not afford to live. It's too expensive. After a fellow dies, you know, and gets settled down, the expense ceases. That confounded druggist cheated me. I had to pay five cents for the poison. He should have given me two doses for that sum.' He was so stingy that he died without a struggle. Taking it all into consideration, John was the closest man I ever saw."

Gems of Thought.

It is not genius so much as ability that carries one through the battles of life.

Be charitable and indulgent to every one but yourself.

If you are determined to live and die a slave to custom, see that it is at least a good one.

The best education in the world is that got by struggling to get a living.

If thou art wise thou knowest thine own ignorance; and thou art ignorant if thou knowest not thyself.

I have often wondered how every man loves himself more than all the rest of men, yet sets less value on his own opinion of himself than on the opinion of others.

Nurture your mind with great thoughts; to believe in the heroic makes heroes.

Childhood does sometimes pay a second visit to man—to youth never; how responsible are we for the use of a period so precious in itself, which will soon pass away, and never return.

To make others' wit appear more than one's own, is a good rule in conversation; a necessary one, to let others take notice of your wit, and never do it yourself.

The chief ingredients in the composition of those qualities that gain esteem and praise, are good nature, truth, good sense and good breeding.

Brave Brady.

Human nature, high and low, rich and poor, shows certain points of resemblance wherever we may roam. A party of us drove in from the headwater of the Cachee la Pondree a few years ago, and the coach driver we had hired for the trip was a little wiry Irishman whose trans-Missouri name was Finecut Brady. He was quite a little fellow, weighing about 113 pounds without his revolvers. He was about the only meek appearing Irishman that I had ever seen. While we were in camp, or on the road, we could make Finecut do anything for us, and some of the boys got to imposing on him, I thought. Coming up the steep and dizzy road that leads out of the valley of Pondre across the hills toward Diamond peak, we saw half a mile up the hill, a buckskin mule. Finecut saw him and recognized him, apparently; for, very much to my surprise, he handed the lines to me and said:

"Here, William, steer these Cayuse brutes up the hill, while I assassinate that man, will you?"

"Certainly," said I: "any time you see anything on the road that you want to kill, just hand the ribbons to me and I'll do the heavy driving."

Finecut took out his revolver, looked it over to see that it was in shape, and then put it back in his pannier. By the time we were within fifty yards of the solitary horseman, and I was a little nervous when I saw that he was a big, fierce-looking kind of Captain Kidd, who could take two such weasels as Brady and thump their heads together.

We tried to pacify Finecut, but he was wild with passion. He was a perfect cyclone of wrath. He got down from his seat and hailed the stranger with a perfect deluge of profanity. It made my blood run cold, and a friend of mine in the party, who had been a policeman for some years, and was therefore unaccustomed to danger in any form, crawled under the seat. I said:

"Brady, you little mosquito-brained Irish annex, for heaven's sake take one of your size."

We all tried to call him off, but it was of no use. He was determined to kill the stranger, and told him to draw his gun.

"Pull your weepon, you blankety blanked liar from the goolch," said Brady; "a-r-r-r-m yourself and shoot your dye-stooff, you cowardly freak of nature, while I ventilate your immortal soul. Come down off that yaller mool and get yourself mizzured for a funeral sermon, you automattick horse-thief of the w-o-r-rld. I've been lookin' for you, lo, these many days. Why don't you lave yourself down aff that buff mool, you intillictooal phenomenon, till I lave the daylight in your diafram!"

The man seemed thunderstruck. He muttered something or other, but we couldn't hear what it was. Brady saw that he wasn't armed, and with a final threat to shoot him on sight if he didn't take back what he had said about him, Finecut came back and climbed into the wagon. We drove on at a trot, and everybody hove a sigh of relief. As I looked back the black-whiskered stranger still sat on his mule, in the road, without a sign of moving on. He seemed to have been paralyzed with fear.

I knew Finecut for years after that, but I always called him Mr. Brady. He drove us out to the mountains after that many times, but we never allowed ourselves to impose upon him. We used to vie with each other trying to win Mr. Brady's esteem. If he had asked me for ten dollars I would have loaned it to him just as soon as I could find a friend who would let me have it. He could have got any favor out of me after that little incident in the canyon.

Last summer I was again riding in the same locality with the sheriff, not through any fault of my own, however, when all at once we met the solitary horseman that Brady had cowed and bullied years ago on that identical road. He was mounted on the same ecru mule. I was afraid he would recognize me as an accomplice of Brady's, and load me down with reproaches and lead; but he did not. He rode silently by, not even returning the sheriff's salutation.

When he got past and out of sight I asked the sheriff who that was.

"That man on the yaller mule? Don't you know him? Why, that's Minkins, poor cuss! When the resurrection comes off Gabriel will have to raise Minkins by hand."

"Why?"

"Oh, he got mixed up with a premature blast on the Comstock in an early day, and that's the last noise he ever heard distinctly. Paralyzed his hearing and talking outfit. I shouldn't be surprised if Minkins missed the ressurrection altogether."

A Doctor's Diary.

A pocket diary picked up in the street of a neighboring city would seem to indicate, from the following choice extract, that the owner was a medical man:

"Kase 232. Old Misses Boggs. Aint got no bisms, but has plenty of money. Sickness all a humbug. Gav her sum of my celebrated 'Dipsefloriken,' which she sed she drank like cold tee—which it was too. Must put sumthing in it to make her feel sick and bad. The Old Woman has got the roks."

"I'll take it out of his hide," remarked Jim to Mildred, referring in a towering passion to some injustice done him by a schoolmate. "Don't take it out of his hide, Jim," replied the high school girl, "extract it from his epidermis."

A Chance for Reform.

For some years I have advocated orally, the abolition of the present system of ladling out political spoils by which a member of Congress becomes either an office broker, or the unhappy instrument of his constituency with which to pull out hot chestnuts. Now that another prominent statesman besides myself has attacked the question, I feel free to say a few words on the subject, not as a partisan, but as a man whose voice has always been loud and resonent on behalf of progress and improvement—in other people.

In the matter of State patronage, should not the whole of each State's quota of appointments be disposed of in the State itself, subject to the approval of the President and Congress and in conformity to the existing civil service laws?

In other words, let the applicant's personal qualifications and political significance be passed upon where he is best known and then let the proper committee and appointive power look into his official fitness for the place as provided in such cases. Neither the President nor the heads of departments, as a rule, can personally investigate the home status of an aspirant for appointment. The duty, therefore, of prying into this matter and indorsing or repudiating the claims of the petitioner rests upon the already overburdened Congressman. So irksome has this at last become, that it is about all we can do now to get anybody to go to Congress. Every man who has gone to Congress for twenty years has done so reluctantly. I know this, because I have talked with several of them, and on the promise that it should go no further they have admitted it to me.

Every year now swells its innumerable army of martyrs who yearn to be of service to their distracted country. This would have been so even if there had been no change in the political complexion of the administration. My idea is, therefore, to bring the producer nearer to the consumer as it were. This would leave the Senator or member time to attend to his legislative duties and also an opportunity to form the acquaintance of his family. At present the only time that Congress can really get to legislate is when it sits with closed doors defended by seventy-five men on the front stoop of the Capital armed with shot guns and orders to shoot the first man who tries to climb the front yard fence with a petition.

I say freely that for years my sympathies have been with Congress, and yet Congress never did anything for me. I presume that if I were to go up into the Senate to-morrow and take off my overcoat and undertake to address that august body, the President would not recognize me, and yet there's nothing in my power that I would not do for either branch of our National Congress if it happened to be in trouble or needed help.

I say, then, that this never-dying nuisance of alternating between the various appointment clerks at Washington and a morbidly restless and hungry constituency ought to be abolished, or else the pay of Senators and members should be increased to $100 a minute so that when they go to the asylum there will be something left for their distressed families to live upon.

I say to you, fellow-citizens, in clarion tones, that we ought to look into this matter at once. We do not know how soon any one of us may be Congressmen ourselves. We are happy and contented now, it is true, but others, too, have been lulled to rest in fancied security, only to awake and find themselves selected by cruel fate to wrestle in the pandemonium of Congress days, and at night to wear out the knees of their best pantaloons petitioning a reluctant administration to do the square thing by a venerable constituent who helped to carry Rock Elm Center in the late election.

If our fair ship of State is to go down in the second century of her proud history, if along the shores of remorseless time her bleached and battered hulk is to slowly rot under the eye of succeeding empires, if her brave and brawny crew must be swallowed up in the green, foam-crested billows that hold the history alike of kingdom and of men, let it be the result of foreign power and not of cruel and criminal folly at home. Let not the future historian write with red chalk, in letters sixteen feet high, that America went down into oblivion's remorseless appetite, the prey to a prolonged political scuffle on the part of 40,000,000 men who yearned to fill 4,000,000 offices, who filled the lunatic asylum with members of Congress instead and sighed for other lunatic asylums which they might fill with yet other Congressmen.

Those of us who have never been sent to Congress ought not to forget others less fortunate who may have been sent there, perhaps through no fault of their own. We should do as we would be done by in this respect, and while we are enjoying ourselves through the glad yuletide and holiday season we should not forget the man who has innocently become the creature of a yearnful and "ornery" constituency.

Carl Pretzel says he don't want to marry a red-headed girl. If Carl isn't careful he won't have any auburn-haired girls left among his lady readers. They are not of the kind to hear any insulting insinuations in silence. —[Saratoga Eagle. The Pretzel says nothing of the kind. To us "brick-tops" are angels.—[Pretzel's Weekly.

SATURDAY, MARCH 7, ...1885

C. Mulholland,
EDITOR & PRORPIETOR.

THE death of Matt Welch, a former resident of Candelaria, is reported from Calico. He died suddenly of heart disease.

IN the Legislature, a bill has been passed providing for a constitutional amendment to tax the gross earnings of railroads two and a half per cent.

THE New Orleans exposition is reported to be on the eve of total collapse Great dissatisfaction with the management has existed from the opening.

IT has been estimated that adverse legislation on the silver question, would injure the territory west of the Missouri river to the extent of one hundred millions of dollars in one year. This includes depreciation of values of property.

THE letter of Mr. Cleveland to Mr, Warner, in which the former took strong ground against the further coinage of silver, was immediately followed by a large majority vote in the House of Representatives in direct opposition to the views of Mr. Cleveland. As there is a large Democratic majority in the House of Representatives, this vote proves that the silver question will be discussed purely on its merits, and without any regard to partizan politics. The friends of silver ask nothing more.

GRAVE fears are felt that General Grant cannot live much longer. It is reported that cancer of the tongue is developing in spite of all remedies, and that his general health is bad. The merit of no man will be fully admitted till after he is dead, and the greater the merit, the more bitter and malignant will be the opposition and abuse while he lives. The death of General Grant is necessary that all his countrymen should do justice to the ability and purity with which he served his country.

FOR a distance of seventy miles Owens river flows through a valley that its waters would irrigate, and enable the land to support in comfort and even luxury, a population of fifty thousand persons. The fine farms, orchards, and handsome houses around Bishop Creek, where only a beginning has been made in the work of irrigation, shows what could be done over the whole valley in a few years. Yet under the doctrine of riparian rights, and the recent decision of our Supreme Court, one man could, by locating a piece of land near Owens lake, keep this magnificent valley in a state of nature for all time to come. Under such law, what becomes of the doctrine of the greatest good of the greatest number?

IN a letter written by Mr. Cleveland in response to a communication from members of Congress, asking him to express his views on the question of silver coinage, he says; "I hope you concur with me and with the great majority of our fellow-citizens in deeming most desirable at the present juncture to maintain and continue in use the mass of gold coin as well as the mass of silver already coined. This is possible by the present suspension of purchase and coinage of silver. I am not aware that by any other method it is possible. It is of momentous importance to prevent the two metals parting company; to prevent increasing the displacement of gold by increasing the coinage of silver; to prevent the disuse of gold by and in the Custom-houses of the United States and in the daily business of the people, and to prevent the ultimate expulsion of gold by silver."

This letter removes all doubt as to the attitude of our new President in relation to the further coinage of silves; he will be unalterably opposed to it.

ANOTHER rich gift is promised the State. A Mr. Gird of San Barnardino county is credited with the intention of donating the Chino ranch in that county for educational purposes; proposes to erect thereon, at his own expense, a State Industrial school, with all the necessary out buildings, and also to furnish it with all the machinery, etc., necessary to make it a success. The magnitude of the proposed gift will be seen when it is stated that the Chino ranch comprises 37,000 acres and must be worth at least $500,000. Then there are more than 10,000 head of cattle on the ranch, and these with 500 horses and mules, must be worth in the neighborhood of $400,000. The reason given by Mr. Gird for this munificent gift are that he has no children to leave his wealth to, and all his relatives are well fixed in the matter of worldly stores, and, therefore, need no aid from him Consequently he has determined to benefit mankind in general as far as he can, and take the means of doing it during his own life time, so as to be assured that it will be well done.

Peach, plum and apricot trees are now in full bloom around Independence and look very beautiful.

It is a pleasure to note that there are signs of reviving industry at Bodie. The *Miner* of last Saturday says; "Superintendent John Kelley informs us that the Bodie mill will start up tomorrow morning. Twenty men will be required to run the mill and do the extra work at the mine.

ON next Monday a week, March 16th, there will be an annular eclipse of the sun, visible throughout North America and the adjacent Pacific and Atlantic oceans and the west of Ireland. The central line will strike Cape Mendocino, California, about sunrise, and pass over Oregon, Idaho and Montana. The best places to see the eclipse will be Eureka, California, and Bozeman, Montana. In New England more than one-half of the sun will be obscured; at St. Paul, five-sixths; at San Francisco, Sacramento, Winnipeg and Manitoba, about fifteen-sixteenths.

THE constitutional term of the Legislature expired last Thursday. No report has yet reached here of the fate of the bill for the amendment of the County Government bill. When last heard from, the bill was in the Senate, but it is very doubtful if it has passed that body No other county beside Inyo has any very deep interest in the bill, and as there were other bills pending in which many other counties were deeply enterested, it is very doubtful if Mr Reddy would be able, with all the exertion he could possibly make, to get this bill so far advanced as to secure its passage before adjournment.

GOVERNOR Stoneman, accompanied by his staff officers, all in full uniform, called on that disreputable person, Patti, a few days ago. Our Governor has a most unfortunate knack of getting into positions entirely unbecoming the chief Magistrate of a great state. Even if this woman Patti had not for years been living in open defiance of all common decency, it is beneath the dignity of the Governor of California to call in state upon a strolling singing woman. The wily Briton who is manager for Patti, no doubt entrapped the Gevernor into this visit as an advertisement; not much shrewdness is required to get Governor Stoneman to forget the dignity that ought to distinguish the position he holds.

Injurious Talking.

A Frenchman, speaking of a person known to his comrades, said: "His money costs him nothing, for he always opens it at the expense of others." There are multitudes of persons to whom that remark will apply. Exaggeration and defamation are two fertile sources of social mischief. We meet with persons who sensitively shrink from the deliberate violation of truth, who will habitually over-color their statements to such an extent that a false impression is conveyed to the mind of the listner. They thus lower the tone of their own mind, destroy the power of accurate perception, diminish the confidence of their friends and sow the seeds of much error in the world. They soon discover that they are not credited even when they speak soberly. Their moral drafts upon social confidence are dishonored.

But perhaps the most injurious talk is that which detracts from the character of another—that which openly or in disguise strikes at the reputation of a brother pilgrim—that which "cuts men's throats with whisperings"—that which is adopted by the envious rival who seeks to build "his name on the ruins of another's fame." Little does the slanderer think what a bitter harvest he will himself reap from the calumnious words he has uttered. A lady visited Philip Neri on one occasion, accusing herself of being a slanderer. "Do you frequently fall into the fault?" he inquired. "Yes, very often," replied the penitent. "My dear child," said Philip, "your fault is great, but the mercy of God is greater. I now bid thee do as follows: Go to the nearest market and purchase a chicken just killed and still covered with feathers; then walk to a certain distance, plucking the bird as you go. Your walk finished, return to me." The woman did as directed, and returned, anxious to know the meaning of so singular an injunction. "You have been very faithful to the first part of my orders," said Philip; "now do the second part and you will be cured. Retrace your steps, pass through all the places you have traveled, and gather up one by one all the feathers you have scattered." "But," said the woman, "I cast the feathers carelessly away, and the wind carried them in all directions." "Well, my child," replied Philip, "so it is with your words of slander; like the feathers which the wind has scattered, they have been wafted in many directions. Call them back now if you can. Go and sin no more."

One of the professors of the University of Texas was engaged in explaining the Darwinian theory to his class, when he observed that they were not paping vroper attention. "Gentlemen," said the professor, "when I am endeavored to explain to you the peculiarities of the monkey I wish you would look right at me."

The uninteligibility of a brakeman's call when announcing a station is proverbial. The other day, however, one called this station plain enough. There was a Sheriff on the train with some prisoners for the penitentiary and upon announcing the arrival here the brakeman said: "Yuma! Change clothes; ten years for refreshment?"

Ingenious Counterfeiting.

Spurious bullion has been detected at several points throughout the country for some months past. Some of it has been found in the United States Mint. It was a clever imitation, but it was immediately discovered. The counterfeit metal came to the mint from the agent of the Adams Express Company. The want of specific gravity first attracted attention. It looked genuine and withstood the acid test. An analysis showed that it was made out of steel fillings covered with fine gold, made to adhere by a composition of turpentine. The deposits weighed about ten ounces each, Troy measure. Col. Snowden says it is one of the boldest attempts in gold counterfeiting he has known in later years.

Another blow has been struck at the great institution of agriculture. The Duke of Edinburgh has given up fiddling and gone to farming.

It is said that when a monkey looks into a mirror he immediately goes and peeps behind it. He evidently wants to kick himself for being so ugly.

A Georgia man compels his daughter to eat onions every night for supper, and at 10 P. M. that household is sleeping peacefully.—*Chicago Tribune.*

The method of curing hay in Norway is peculiar. In driving along the highway, one notices out in the midst of a field ten or a dozen lengths of post and rail-fence in a straight line. What is the object of the fences? When the grass is cut it is laid over these rails, tier above tier, to dry. In the curing process, it has the benefit of the wind as well as sun: and, in case of rain, the water runs off readily. The color of the hay is nearly as bright a green as the standing grass.—*National Baptist.*

Mr. Edison, the inventor, is slighdly deaf, and is glad of it, and does not wish to be cured. There are many things which now he cannot hear, and does not want to hear. Among them he enumerates cars, carts, licensed venders, bores, persons at the telephone, lawyers speaking to juries, political speeches, cats at night, and men who want to borrow money. He proposes to invent a machine that will make people just as deaf as they want to be.

There is a wood-pulp factory at Augusta, Ga., at which the expedition with which paper could be manufactured was recently demonstrated. A tree was cut in the forest at six o'clock in the morning, was made into pulp and then into paper at six o'clock in the evening, and distributed among the people as a newspaper by six o'clock the next morning. From a tree in the forest to a printed newspaper being read by thousands in the brief round of twenty-four hours.—*Industrial South.*

There is a negro graduate at Harvard this year—Robert Hebberton Terrell, a Virginian, and the son of slave parents. He went to college as a waiter, and at that time was illiterate; but some of the white students took a fancy to him, and helped him through a preparatory course, after which he supported himself by teaching a Boston class of negro boys.

The Origin of Oaths.

Mr. Sharman, in his book with the punning title, "A Cursory History of Swearing," finds the origin of swearing in the early dread of falsehood, against which the laws were as yet powerless to guard. Hesiod fables that the god of oaths was the son of Discord. We have profitted by centuries of untruthfulness, and "learnt the preponderating advantages of an intelligible code of truth." Thus the oath, which once meant the seal of truth, has dwindled down till "it has come to be a common catch word, or the fustian ornament of somewhat spirited talk." Many will now perjure themselves on the Bible, a form of oath which is a relic of barbarism, when a solemn affirmation would seem to them all powerful in its restraint. It was charged against Thomas a' Becket that he swore on a book of old songs, and the chroniclers mention, among objects chosen, swords and javelins, love tokens and heathen gods, sepulchers of debtors, abbey churches, and even the price of Potter's field. A recent traveler in the East relates how on emerging from the Arabian desert she was met by an elderly sheikh, a man with a beard worthy of Abraham, who gravely bowed to the ground, and, with a solemn pride in his linguistic accomplishments, proceeded to mingle sonorous British oaths in his courteous salutation.

Brother Gardner's Legends.

Brother Gardner announced the following legends to be hung on the walls during the fall and winter term:

"A bigot am mo' to pe feered dan a fule."

"You kin silence a man by knockin' him down, but it takes argyment to convince him."

"Human natur' kin sometimes be depended on ober night, but it's de safest way to take a note of hand far it."

"A man's rating am not how much he kin run in debt, but how nigh he kin squar' up ebery Saturday night.

"Industry am sartin to bring plenty an' economy neber goes b'arfut in winter."

"Between sayin' nuffin' an' talkin' too much, de world leans to de man who holds his tongue."

"Our opinions of ourselves makes us all great men."

Predominant opinions are generally the opinions of the generations that is vanishing.

St. Louis has fifty persons who claim to be descended from English, Scotch, Irish and Welsh Kings, and who make a patent to the nobility by giving a list of their names to the newspapers.

A shrewd old lady cautioned her married daughter against worrying her husband too much, and concluded by saying: "My child, a man is like an egg. Kept in hot water a little while he may boil soft, but keep him there too long and he hardens."

Lotta was lately presented by Wilson Barrett, in London, with a pyramid of red, white and blue flowers, surrounded with stars of sterling silver, representing the United States.

Items of Interest.

A hand (horse measure) is four inches high.

Quill pens are again becoming fashionable.

A Boston lady has patented a bathing garment.

The first horse railroad was built in 1826-27.

Mexican chamber "maids" are always Indian boys.

New York city derives $300,000 a year from ferry rents.

The average cost of feeding paupers in New York City is thirteen cents a day.

There is to be a revival of smooth faces among society men. The mutton-chop must go.

Four hundred dollars was paid recently by a citizen of Pittsfield, Mass., for an African gray parrot.

When a fire alarm is struck in Albany, Ga., the engine which first gets under way gets a prize of $5.

During the last five years 10,991 soldiers have deserted from the Regular Army, or nearly every other man.

There are over ten and one-fifth miles of paved streets in Atlanta, Ga., one-half of which is the work of 1884.

The city physicians of Atlanta, Ga., receive a salary of eighty-five cents a day and furnish their own medicine.

Idaho has now in force a law prescribing an anti-polygamy test oath for county and precinct officers in that Territory.

Boston street flower-sellers dodge the city license by standing upon a small corner that is owned by the United States Government.

A Bridgeport, Conn., church has a silver communion tankard 146 and a cup 175 years old; six generations have drunk from the latter.

Taxation, some one who has figured on it says, amounts to $25 per family in the United States, $10 per family less than in Canada.

There are four thousand public libraries in the United States, containing 15,000,000 volumes, toward the support of which $3,000,000 are annually paid.

Two lads, aged respectively five and seven years, arrived by the Oregon at Castle Garden the other day, duly labeled and consigned to their father in Connecticut.

In several Hudson river counties, recently, surveyors while running farm-line boundaries, have been unable to use their needles on account of the large deposits of iron ore.

The city limits of New Orleans so greatly exceed the bounds of the city proper, that some persons who live within the corporation limits have not a neighbor within twenty miles.

According to the official returns of the Health Department of New York there were reported in the ten years ended with 1883 34,697 cases of diphtheria, of which 15,697 proved fatal.

Lilac postal notes, which have been turned out at the rate of about 2,000,000 a month, and will be increased hereafter 40 per cent, are handled by thirty five persons and are counted forty times.

A rifle ball shot up in the air, vertically, will have the same velocity when it strikes the earth on its return as when it left the rifle, minus the resistance of the air, which is very great and continuous both ways.

Italians are perhaps the greatest national wanderers. There are 274,825 in France and the French colonies, 254,388, in the Argentine Republic, 170,825 in the United States, 82,196 in Brazil, and only 14,302 in Great Britain and colonies.

The returns of twenty-one murders on Christmas eve and Christmas day in Kentucky have come in. It is a notable fact that every one of these murders save one was committed by an intoxicated person.

In the New York pilot service there are nineteen boats, with 133 licensed pilots, all but two of whom are in active service. During 1884, 6,045 vessels were piloted in and out of the harbor at a total cost to the vessel owners of $415,513 45.

Of mines, the highest in the world is the silver mine of Potosi, in the Andes of Peru, which is stated as being, 11,367 feet above the level of the sea, and the lowest mine is the salt mine of Neusalzwerk. Westphalia, which is said to be 2,050 feet below the sea.

Eating an Orange Artistically.

In Brazil the orange-eater begins by transfixing with a fork the vegetable globe in the neighborhood of the south pole. Then, with a sharp case-knife he makes through the rind a circular cut, which may be likened to the Antarctic circle. Next he slices oft the whole of the Artic zone. Then, cutting from north to south, he slices off the rind from one polar circle to another. The rind thus having been removed, and the luscious sphere being still transfixed and held in his left hand before him, the eater, with the knife in his right, slices off the tropical region and puts the pieces in his mouth on the flat side, or pierced with the point of the cutting instrument. In this operation one-sixth of the substance of the fruit is wasted in removing the rind, and another sixth in cutting away the core; but with the best of oranges by retail at less than a cent apiece, no matter.

He Asked a Blessing.

Lew Campbell, the "One Spoon Baking Powder" man, who travels South, was invited by a lady to dinner. The guests were all seated, and the lady, turning to Lew said:

"Mr. Campbell, will you ask a blessing?"

"Wha—wha—beg pardon, madam," he stammered, dropping his napkin.

"Will you please ask a blessing?" she repeated.

Then she bowed her head and so did every body else, and poor Lew looked down at his plate and stuttered:

"Lor—Lord have mercy on these poor little. Amen."

Coffee Lore.

Coffee comes to us laden with the fragrance of Oriental bazaars and the romance of the "Arabian Nights." Its early history as an economic product is involved in considerable obscurity, the absence of historical fact being compensated for by an unusual profusion of conjectural statements, and by purely mythical stories. Throwing legend aside, the use of coffee seems to have been introduced from Ethiopia into Persia about the year 875 A. D., and into Arabia from the latter country at the beginning of the fourteenth century. Notwithstanding that its use as a beverage was prohibited by the Koran, it spread rapidly through the Mohammedan nation, and it was publicly sold in Constantinople in 1554. It easily found its way from the Levant to Venice, where coffee houses were established as early as 1615. A Jew named Jacob opened the first coffee-house in England, selling it as a common beverage at Balio College, Oxford, in the year when the Long Parliament met.

Nearly 3,000 new buildings were erected in New York during 1884 which is more than the number registered in any previous year. The sum expended on them, $41,461,000, is nearly $3,000,000 less, however, than was laid out in the same way in 1883.

Mrs. Ingalls says "women is a silent power in the land." All that is necessary to become convinced of the truth of this assertion is to attend a woman's right convention or a charitable fair.

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge No 221 F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensuing Masonic year as follows:

Saturday.....January 24th
" .....February 28th
" .....March 28th
" .....April 25th
" .....May 23
" .....June 27th
" .....July 25th
" .....August 22
" .....September 19th
" .....October 17th
" .....November 21st
" .....December 19th

Members and visiting brethren are cordially invited to attend.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, MARCH 7,.....1885.

NEW TRIAL.—In the case of Drake and Adle against Spencer, carried up by the latter on appeal from the judgment of the Justice at Bishop Creek, the Superior Court set aside the judgment of the Court below and ordered a new trial.

WANT TO BE CIVILIZED.—Last Wednesday the following persons declared their intention to become American citizens: Thomas Henry Smith; William Charles Bulpit: John Prince Smith John William Bently. They were all from Bishop Creek, and natives of Prince Edward's Island.

DEARTH OF SEED.—There is quite a scarcity of alfalfa seed in Owens valley, many inquiries are made for the article and a good deal of ground will have to be unseeded this season. Parties who may have alfalfa seed to sell, would do well to communicate with the merchams in any of the towns in Inyo county.

SETTLED.—An old account was settled at Candelaria last week. There had been a bad feeling existing between Antoine Marshall and Dave Abilaz; the two men had been at a dance all night, and next morning met on the street, Marshall armed with a pistol and Abilaz with a knife. Abilaz was killed and Marshall wounded. The latter is in custody.

WHITE HILL MINE.—At the White Hill mine a new tunnel was started about ten days ago, the ledge was struck within a few feet of the surface, and the tunnel has since been run in ore all the way. Already a good quanity is ready for shipment, and is of as good quality as that lately shipped from other parts of the same mine. The White Hill is developping into a good property.

SUPERINTEDENT'S REPORT.—Superintendent's office, Modoc Con. Mining Co. Lookout, Cal., March 1st, 1885.

J. W. Pew, Sec. *Dear Sir*:—I am still sinking winze from the 110 foot level (South Lookout) present depth 75 feet. Ledge in bottom strong with from one to two and one half foot of seventy two ounce ore. Will start level as soon as I am down seventy-five feet. It is only a question of getting in coal, iron and wood when I will start up the furnace again.

Signed, F. FITZGERALD.
Lessee.

INDIAN MISCHIEF.—Last Thursday evening an alarm of fire attracted a crowd of men to the ranch of E. Robinson. Some Indian had started a fire in the sage brush just north of the place; the flames spread rapidly among the dry brush, and a fresh breeze swept the fire toward the hay stacks and buildings belonging to Mr. Robinson. Fortunately help arrived in time to check the fire, and no damage was done. The alarm was given about nine oclock in the evening, and plenty of men were about at that hour to lend assistance; had the fire been started a few hours later, there can be little doubt that stacks, barns and even the dwelling house, would all have been destroyed. The miserable lazy Indians are a worse nuisance than skunks or coyotes.

LUCKY MINERS.—Two miners are reported to have made a lucky strike near Sonora. The Tuolumne *Independent* says; "This week Messrs. Michael Shine and David Oliver, of Sonora, struck a rich pocket on a claim they have leased from Mr. Garrett, at Bald Mountain, Brown's Flat. Up to Thursday they had taken out, within three or four days, a large amount,—and the bottom is not yet. They were pounding it out in mortars, yesterday. Mr Shine tells me they have from $10,000 to $20,000. Good judges say, from indications, they may take out $25,000 before they get it all, and, perhaps, $50,000. Mr. Garrett gets 30 per cent of all taken out. One chunk is 12 to 15 inches long, and ten inches wide, and is a mass of gold and quartz; another piece of about 25 pounds is nearly all gold.

A GOOD PROPERTY.—S. G. Gregg has lately completed a ditch that will convey water onto a section of desert land on the east side of Owens river, opposite Big Pine. The ditch is seven miles long and twenty feet wide, and will carry a stream four feet deep. The land was located under the desert land act, and every foot of it can be irrigated from the ditch. The soil is good, and will produce all grains, fruits and vegatables raised in other parts of the valley. The C & C. railroad runs through the land. The ditch was made from time to time as Mr. Gregg found convenient. The total cost of the work from beginning to end, estimating labor at the usual price, was three thousand dollars. A part of the land has already been rented, and is planted with wheat and other grain; alfalfa is planted as seed can be got, but that article is scarce at present. Mr. Gregg will plant orchards and make other improvements as rapidly as possible. In a very few years this will be a handsome and valuable estate. On the same side of Owens river, for a distance of seventy miles, similar locations might be made, any one of which would be just as good as that chosen by Mr. Gregg, and the river would supply an abundance of water for all. On the west side of the river there is a very much wider field for improvement; the land is not any better, but there is vastly more of it. If half the effort was made to advertise the advantages offered to settlers in Inyo county, that is put forth by other and less highly favored parts of the state, a tide of prosperity would set in that would very much astonish our easy going people.

Personal Mention.

Joe Harris has gone to San Francisco on a two weeks' visit.

Charley Hillman is so sick that he is not expected to recover.

Miss Julia Cook returned home last Sunday, from a visit to Big Pine.

Frank Fitzgerald was up from Darwin at the beginning of the week.

Paul Howard returned to Lone Pine a few days ago, after an absense of some months.

Mr. and Mrs. Chalfant and family went to Bishop Creek last Thursday morning.

John Schober passed through Independence yesterday, with a big team, on his way to Darwin.

PAUL Bennet has opened a law office in Stockton, and will make his home there. He is in partnership with Hon. P. Reddy.

John H. Gay and T. J. Mayfield of White River, Kern county, arrived at Independence last Monday and have stayed here since.

N. G. Fairman returned to Independence from New York last Wednesday. Mr. Fairman is the representative of parties in New York who are interested in mines at Pannamint.

Charles Levy returned to Lone Pine a few days ago; the climate of Mojave proved so injurious to him that he would have died in a short time had he remained. He is already much better in health since his return to Lone Pine.

ODD FELLOWS, ATTENTION!—As business of importance will be brought before the Lodge at Independence, at the next regular meeting on Thursday evening, the members are earnestly requested to attend.

SHOOTING.—A shooting scrape is reported to have taken place at Bishop Creek last week. The names of the principals are given as Daniels and Reed. The latter received a pistol bullet behind and where the flesh is thickest.

Subscribers to the Inyo Independend who may not receive their paper regularly, will confer a favor by communicating with the office. The publisher will do all he can to secure prompt delivery of the paper to every subscriber.

ANOTHER SHOOTING SCRAPE.—Last Sunday night a shooting scrape occured at Eureka, Nevada. William Allen and Charles Wagoner, two furnace men at the Richmond Con. works, entered a saloon somewhat intoxicated, where a quarrel arose between them. Allen called Wagoner some vile names whereupon the latter drew a 36 calibre Colt's revolver and shot Allen, the bullet passing through the right lung. It was afterwards extracted from above the center of the shoulder blade. Allen may possibly recover.

SUICIDE.—Last Thursday morning Oscar B. Bacon was found dead in his dwelling at Fort Independence. The Coroner was notified, and summoned a jury to hold an inquest. The deceased was found lying on the floor, with a double barrelled gun resting upon the body, one barrel had been discharged into the mouth. The bullet had entered the brain. The deceased was possessed of great mechanical ingenuity, and made a number of inventions, any one of which would have made him rich if well managed; but he rather shunned than sought publicity for his inventions, and never attempted to make any money out of them. Evidently Bacon was of unsound mind for several years past; he had already made two attempts upon his own life, once by poison, and again by hanging. He was unmarried, a native of Connecticut, and aged forty-nine years. He had been a resident of Inyo county for about twenty years.

A VALUABLE DOCUMENT.—The Executive Committee of the State Irrigation Convention, who have been in session in Sacramento since January 1st as a Legislation Committee framing bills to protect and promote irrigation and urging their passage, have issued a pamphlet entitled an "Address to the Legislature of the State of California." It contains eighty-six pages of closely printed matter. It opens with an address to the Legislature signed by the members of the committee, covering seventeen pages, in which an able legal argument is made against the destructive doctrine of riparianism which the committee believe the Supreme Court to have been inclined to apply to this State through a mistaken construction of the common law. This is followed by the celebrated decision of the Supreme Court of Colorado, when the Court considered the climate, needs and necessities of the people and decided that it had no application. These portions of the pamphlet comprise twenty-six pages. The remaining six pages under the heading "The Spirit of the Press on the subject of Irrigation" is made up of extracts, in small type, from all the leading newspapers in the State so selected as to afford a clear, compendious view of the great overshadowing question. This pamphlet should be extensively circulated throughout the State, as the people generally need information on this momentous subject, as well as the Legislature.

New Zealand Songstress.

Madam Marie Carandini, Musical Artist, Wellington, N. Z., writes to the Christchurch, New Zealand *Telegraph*: "I have used St. Jacobs Oil, and find much relief in case of rheumatism, and for all neuralgic pains.

FROM THE STATE IRRIGATION COMMITTEE.

SACRAMENTO,
Feb. 25, 1885.

To the Editor of INDEPENDENT, *Independence*:—The Legislative Committee of the State Irrigation Convention, desire to convey to you their thanks, and the gratitude of every irrigator in California, for the kindly appreciation you have shown of the justice of their cause, and the substantial aid you have rendered them, through the columns of your paper. The subject of irrigation is the leading question of the day in this State, and is destined to overshadow all other political issues before the people. All fair minded men are satisfied that the bills now before the Legislature, prepared by this Committee, are the best yet proposed and should pass. Their imperfections will become known by experience, and changes and amendments will become necessary in the future. The gigantic proportions which the irrigation interests have already assumed, together with the certainty of increase of the hundreds of thousands now interested, to millions in the not distant future, warrant the belief that henceforth the irrigation question will always be second to none.

The enemies of irrigation are leaving no stone unturned to defeat the popular will in the Legislature. Nothing will finally crush riparianism but unceasing efforts by those arrayed on the side of irrigation. Your record upon this subject assures us and the people of your continued and active support.

We herewith enclose a copy of the Address of this committee, containing an appendix of expressions of the press upon irrigation. The lack of time has necessarily made it impossible to obtain extracts from all papers which are on the people's side of the question. We hope in another pamphlet to present to the people the views of all papers in the State.

Very respectfully,
J. DE BARTH SHORB,
J. F. WHARTON,
W. S. GREEN,
R. HUDNUT,
H. S. DIXON,
L. B. RUGGLES,
E. H. TUCKER,
D. ZUMWALT.
Legislative Committee
of the State Irrigation Convention.

—Last Wednesday there was some display of bunting around town, in honor of the inauguration of President Cleveland. The national flag was displayed all day from the top of the Court house. There were no other observances of the occasion at Independence.

—Two citizens of Independence went down to the Owens river bridge last Thursday, and in a little while caught eighty cat fish. Evidently the river is abundantly stocked with cat fish.

BORN.

FOWERS—at Burns, Grant county, Oregon, February 6th, 1885, to Mr. and Mrs. Stanton Fowers, a son.

DIED

NOTICE TO CREDITORS.

IN THE SUPERIOR COURT of the County of Inyo, State of California. In the matter of the estate of W. A. Baker, deceased. Order of Publication of Notice to Creditors.

IT IS ORDERED, That notice to the creditors of W. A. Baker, deceased, be given by publication in the INYO INDEPENDENT, a newspaper printed and published in the County of Inyo, at least once a week for four weeks. Dated February 24, 1885.

JOHN A. HANNAH,
Judge of Superior Court.

ESTATE OF W. A. BAKER, DECEASED. Notice is hereby given by the undersigned Executrix of the estate of William A. Baker deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Executrix, at her residence at Big Pine, in the county of Inyo.

Dated, February 24, 1885.

FANNIE F. BAKER,
Executrix of the Estate of W. A. Baker, deceased.

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNTY of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. PARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant.

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents being balance due on an account started and for money advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said sum so expended and advanced by plaintiffs to defendant, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $5 820.09, upon which there has been paid the sum of $529, leaving a balance of $527.09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527.09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five.

W. L. HUNTER, Clerk.

(SEAL.)
REDDY & CONKLIN, Attorneys for Plaintiff.

SATURDAY, MARCH 7, ... 1885.

A REDUCED SWELL

Down on His Luck But With Plenty of Friends.

The World doesn't alway go back on a man when he is down. If he is one of the right sort his friends are apt to stick to him, regardless of the condition of his finances. I was impressed with this last night.

There were two men dining at one of the small tables at the Cafe Delmonico. One of them was in evening dress and is tolerably well known as the son of a man who has owned many famous race horses, and is an enthusiastic turf man. Opposite him, conversing quietly, was a man in an ordinary business suit, who ate his dinner with a great deal of satisfaction. He was rather small of stature, his hair was thin on top and his face heavily lined. He had a drooping mustache and a rather blaze manner. His sack coat was well worn and he wore simple bone sleeve-buttons. He was as plainly dressed, without being ragged or careless in his attire, as anyone you would meet in a day's walk, and he was thoroughly at his ease. The head waiter hovered around him and another waiter who had attended to the wants of the pair was so obsequious as to cause some amusement among the other men of the place. It is not often that so much attention is paid a man as he received during his dinner. There was a constant succession of men standing over him, talking to him or dropping into a vacant chair by his side. Every habitue of the place, from the banker, George Work, to the now renowned Berry Wall, made it a point as soon as they entered the restaurant to go over and shake hands with the round-shouldered little man in the business suit. They all called him by his first name and treated him with the utmost cordiality. He did not rise from his seat, but shook hands calmly with one after another as they came up and continued to eat his dinner. He conversed quietly with them. At one time there were half a dozen well-known men around the table, all of them treating the man with a degree of kindness that was almost effusive. It looked as though he were holding a reception.

It was the first time that he had dined at Delmonico's since the death of the late head of the house. Less than ten years ago he was probably the most popular man in upper New York. He had an income of $40,000 a year, a life membership in several of the best clubs, was a yachtsman, an owner of fast horses, and one of the most hospitable of the howling swells about town. He, by the way, was a swell of the proper type, a man of intelligence and culture, who invariably did the correct thing, knew how to order a dinner, and was generous to a fault. He spent vast sums of his principal and interest every year without appearing vulgar. When he was a very young man he belonged to the coterie of men who made their headquarters at Delmonico's Fourteenth street restaurant.

A few years ago he discovered that he had been spending his principal so lavishly that his fortune had dwindled to a quarter of its former proportions and he went into Wall street for the purpose of building it up again. In about three months he was landed flat upon his back without a penny. He sold his horses, got a little ready cash, ran over to the other side of the water, staid there for six months, returned to New York and accepted a position in a life insurance company at a salary of $3,500 a year. He has rooms uptown and spends his nights at one or the other of the clubs in which he was so fortunate as to have a life membership when he was a millionaire. He is said to have been offered numberless opportunities by friends down town, but he sticks to his position and refuses all outside offers. He says he is quite as happy on $3,500 a year as he was on $100,000, and in very much better health. He certainly has as many friends now as when he was at the height of his fortune. So that money does not make the man in every instance after all.

British Wit.

One was a superstitious Englishman, the other was a hard-headed American, and they were helped simultaneously to Chateaubriand. The American glanced at the two plates, and with the courtesy of the nation, helped his friend to salt.

"My heavens!" cried Blobbs, "what have you done? Helping me to salt—why, we shall quarrel before the night is out."

"Say," answered the side pardner, "I never knew that. In my country one is only too glad to get what one wants whoever helps. That is a real, elegant, superstition, but I guess we can fix this up. See here," and before the man, whom Blobbs had half blinded by hurling salt over his left shoulder, had time to expostulate, the side pardner had changed the plates, remarking:

"Say, I have only helped myself to salt, and now I think we shan't quarrel."

And Blobbs thought so too, and continued to think so till he looked at the plates and observed that, with the aid of politeness and superstition, the American had changed his plate of tough brown outside for one of nice, red, juicy undone steak. There is one man in London now who mistrusts American politeness, and thinks of giving up English superstition.

The largest bridge in the world crosses Lake Ponchartrain, at New Orleans, and is twenty-two miles in length. It is trestle-work, on piles, and is made of cypress wood which was first saturated with creosote oil, which renders it impervious to moisture and proof against the attack of barnacles.

A Vice-President Drunk.

Perhaps the most disgraceful scene in our history as a republic was the day of Lincoln's second inauguration, when Andrew Johnson, the vice-president elect, made a maudlin drunken speech before the leading men of this nation and the representatives of nearly every foreign nation of prominence. An old senator told me to-night how this came to be. Said he: "Andrew Johnson was accustomed to drinking, but he seldom took more than he could conveniently and sensibly carry. While governor of Tennessee he used to keep a bottle of whisky in a covered wash-standin his office, and I have taken several drinks with him there. He would raise the cover, take a drink and offer one to me. Still, this was a common custom in the south, and Johnson was not looked upon as a drinking man in Tennessee. I do not think he often took more than enough for himself at Washington.

As to his drunkenness at his inauguration, to which Sumner so sarcastically alluded on the senate floor, John W. Forney told me how it occurred. Forney was clerk of the senate at the time. He said that Johnson had been drinking the night before the inauguration with a lot of friends at the Metropolitan hotel, and as is usual in such cases, he arose the next morning with a bad taste in his mouth and no appetite. The result was that he started up to the Capitol without breakfast, and when he got there he was very weak, and he looked wan and haggard. He came into the senate and asked Mr. Forney if he could get him a drink of whisky. Forney replied yes, and went out and brought in a bottle of old Kentucky Bourbon. Johnson took this and poured a goblet half full, while Forney's eyes grew large as he gulped it down.

This amount would have been enough to have made an ordinary man drunk, but it was not enough for Vice-President Johnson. He filled the glass half full again, and threw it in upon his empty stomach. He then walked off across the room, and he only staggered a little as he took his place beside President Lincoln in front of the assemblage of cabinet secretaries, foreign ministers and others. When it came time to take his oath and the book was handed him to kiss, he waived it aside with his hand, and began to make a speech.

What he said was never reported in the papers, but it must have been very funny. He took each of the secretaries to task and gave them instructions. He addressed the foreign ministers, and though Forney tried to pull him down by holding to his coat tails behind, he would not stop but went on. President Lincoln was, as were all the Americans present, grieved by the occurrence, and Abe Lincoln said: "I hope this will prove a lesson to Andy."

Female Beauty.

I was reading the other day, says a writer in London Truth, a description of female beauty in a book published in the Seventeenth century. Here it is: "To the absolute form of a woman's face there goes a fair white forehead, marked with no wrinkles or lines, longer than that of man's is, and drawing to a roundness about the temples, that it seems to represent a Turkish bowe inverted, where there appears any tumor or gibbosity, or any cloud, no severity or sadness, but a pleasant and modest cheerfulness, a face round, pleasant and elegant to behold. A little mouth, somewhat or scarce opening, small, white teeth, somewhat short, even and in number just twenty-eight, not thin, nor too hard closed together; somewhat full lips—coral, imitating vermillion, a little disjoyned, yet so as the teeth are just discovered; while she holds her peace or laugheth not, unmoved; that is, such a woman as doth not rest, nor bite, nor suck her lips. These lips thus described add a wonderful grace and dignity to a woman's visage. Neither is the nose to be omitted, the honor and ornament of the visage, which represents the outward part of a rose, of a meane size, straight, cleane, with certain obtuseness acute, but the holes of the nostrils small. A round, smooth, pill'd or smooth chin, the candor whereof seems to introduce into the beholder's mind a certain suspicion of a Rose colur, but no traict at all, nor any perception of haire is to be seen neither on the lips or chin. A small, short, purple tongue most certainly doth become a woman, which is yet scarce or never seen, the tip scarce appearing while shee speaks; the Eyebrows ought to be black subtile disjoyned, soft and sweetly arched. Somewhat black eyes, decling to smallness, concave, rolling, laughing, pleasant and shining. The Balls of the Cheeks round, altogether void of haires, fleshie, rosie, and resembling the red Sunshine Apples of Autumne. Above these remains the Temples, which ought to be no less white than the Forehead, and without suspicion of any bones, yet not swoln or depressed but in a manner a little scarce; Ears graven, somewhat short, soft and delicate, aspersed with the delucid colors of Roses. The whole head rather little than great, more round than a man's, comely, erect and elevated."

At a Newport dinner given the other day a lady of eighty-five wore a dress of electric blue, crimson stockings, blue shoes, crimson fan and ribbons, with a bow of combined blue and ribbons in a point lace cap, which was fastened with diamond pins in her snow white hair.

Two men recently hired a large store in Kansas City and succeeded in getting about $15,000 worth of dry goods consigned to them. Then the doors were closed and poeple's curiosity was satisfied by seeing a bit of crape on the outside, supposed to be on account of the death of a daughter of one of the proprietors. Finally, however, a creditor became impatient, and the store was broken into and found empty. All the goods had gone and so had the two partners.

HELP for working people. Send 16 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making more money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, of all ages, grandly successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed from first hour. The broad road to fortune opens before the workers absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY!

It is a never-failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhea, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self-Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.
DR. MINTIE will agree to forfeit Five Hundred Dollars for a case of this kind the VITAL RESTORATIVE (under his special advice and treatment) will not cure, for any thing impure or injurious found in it. Dr. Mintie treats all private diseases successfully without mercury. Consultation Free. Thorough Examination and Advice, including analysis of urine, $5.00. Price of Vital Restorative $1.50 a bottle, or four times the quantity, $5.00, sent to any address upon receipt of price, or C. O. D., secure from observation, and in private name if desired, by
A. E. MINTIE, M. D.
11 Kearney Street, San Francisco.
SAMPLE BOTTLE FREE
Will be sent to any one applying by letter, stating symptoms, sex and age. Strict secrecy in regard to all business transactions.
DR. MINTIE'S KIDNEY REMEDY, NEPHRETICUM, Cures all kinds of Kidney and Bladder Complaints, Gonorrhea, Gleet, Leucorrhea. For sale by all druggists; $1.00 a bottle, six bottles for $5.00.
DR. MINTIE'S DANDELION PILLS are the best and cheapest Dyspepsia and Bilious cure in the market; for sale by all druggists. oct25 1

MINING SHARPS.

Western Story-Tellers That Assayers Have to Deal With.

"Some big liars come into an assayer's office once in a while," a down-town assayer said incidentally in a talk about mining property, "but I think the two biggest liars I have ever seen came into my office last summer, not together, thank goodness, for if they had I would have kicked them out for supposing that I might be an eternal fool. Instead I listened to each, and then gave him a piece of my mind. The first was about forty-five years of age, sharp-featured, long-haired, and with the appearance of a western miner. He carelessly unwrapped a newspaper from a lump of silver ore, and asked in a business-like way to have it assayed. I picked up the lump and said off-hand: 'There's no need of having that assayed. It's 75 per cent silver at first glance.' And it was. It was about as rich a specimen as I had seen in some time. It was worth at least $18,000 a ton.

"'But I want it assayed,' he said. 'I've got a ledge of ore like that six feet wide, and I want to sell it. I don't want to lie about it, and I want to know just what it is worth.'

"That's my business, and of course I knocked off a piece of the lump, I charged him more than I would anybody else, because I knew he intended to swindle somebody. I ground the piece of ore into dust, and put in a bottle. Then I took a little and assayed it. It turned out just what I thought it would. As usual I made a record of the assay, and waited for the man to return.

About four days after the assay four or five respectable old gentlemen came into the office together, and one of them unwrapped a piece of ore and said: 'Will you please assay this for us? We are thinking of buying a silver mine, and this is some of the ore. What do you think it is worth?'

"I looked at it closely and discovered that it was from the lump my western man had brought in.

"'Excuse me, but I have assayed this ore within five days, I said.

"'Y-e-s,' the spokesman of the party said hesitatingly. 'We understand that it has been assayed, but we thought it would be safer to have it assayed for us particularly. How much did you make it out to be worth?'

"'Twelve or fifteen thousand dollars a ton,' I said, not wishing to be too particular at first. 'Tell me.'

"While I was looking over my record book I noticed the gentlemen looking knowingly at one another.

"'It was $18,000,' I remarked turning toward them. It didn't startle them a bit.

"'That's pretty rich, isn't it?'

"'Decidedly so. Where's the mines' I asked.

"'In Colorado. We have a drift there six feet wide.'

"'Colorado!' I exclaimed. That ore never has seen Colorado. That's from some Mexican mine.'

"I knew what I was talking about when I said that because I can pick out Colorado ore from 2,000 specimens. I can pick out ore from the Comstock lode anywhere you put it. After getting a few more particulars about the man who wanted to sell the mine, I said: 'Gentlemen, I don't want to have you taken in by anybody, and especially by anyone of those western mining sharps. Instead of taking my word for this assay, go to somebody else, and I've no doubt you'll find many who will be as honest with you as I intend to be, and have your ore assayed. Take some of this dust with you and see if it will be like your ore.'

"'But we can buy this mine for only $50,000, the first speaker said.

"'If you can find a mine where the ore is all like that, I said, I'll find men who will give you $50,000,000 for it. That isn't a true specimen, and besides, it isn't from Colorado. It's a rich find from some old mine in Mexico.'

"They looked rather glum and went out. I really pitied them. The next day the Western man came in to see me. I gave it to him hot.

"'Look here,' I said. 'We've had just about enough of such fellows as you are around here. When you come on here to sell a mine don't try to palm off Mexican ore for Colorado ore. Take my advice, and don't show that lump to any miner, because he'll know it in a minute. Now skip.'

"I have never seen the old gentlemen since. I guess they found somebody who told them the truth as I did.

"The other chap was a short, dumpy fellow. He wanted me to have everything very secret. He had a piece of ore that I knew was Mexican, and it was a long time before I could get anything out of him. At length he said, 'I'm a commercial traveler, and while I was in Mexico this summer I struck an old trail over the mountains that, I thought, would take me by a short cut to where I wanted to go. I took it, but it was the roughest ground I ever struck. About noon, I was almost overcome, and I dropped off my mule near a shady place to catch a nap, and rest. My mule, that was wandering about, awoke me after a while by nearly stepping on me. In pulling my blanket off the lump that had served as a pillow I noticed that the rock sparkled. It struck me all at once that it was silver, and I looked around to see if there was any other rocks like that. I don't know whether you'll believe it, but within a distance of the full length of a man's body the ground was covered with them. I picked up about twenty pounds and packed them on my mule and started for the nearest settlement. I didn't say anything to anybody in that neighborhood, and I didn't dare to have the ore assayed until I got to El Paso. But I inquired about the price of land and found I could buy that piece of ground for about $10,000. I've come on here to raise that and then start a mine. What do you think the ore is worth?'

"'I took the fellow off in and said, 'If I venture a guess it's off the ground?'

"'Quite likely,' he replied.

"'Was it in this condition?'

"'Of course,' he answered, although he was beginning to be frightened.

"'Then you are the biggest liar I have ever seen,' I said very decidedly.

"The fellow winced and I continued, 'You don't know anything about ore, and you don't know anything about Mexican land. This ore came from some mine, more than twenty feet underground, and it isn't necessary to buy Mexican land before starting a mine. You tell your story well, but you'll have hard work to find anybody who will give you $15,000 to pay for Mexican land. Get out.'

"There's a great difference, you know, in the appearance of ore that has lain on the surface any length of time and that of ore just dug from underground. The latter is more crystallized ore one particular. The surface specimens are what we call the results of a blow-out. Two atoms coming together peak-shaped, are gradually projected out by the washing away of the earth. Water gets in the crevices, and, after awhile, the peak breaks into pieces, which are scattered over the surface. If that chap had had surface ore he might have been believed, except that part about the land, which was way off."

Rays of Sunshine.

To know, and not have the ability to use to, is doubly unfortunate.

The most natural beauty in the world is honesty and moral truth; for all beauty is truth; true features make the beauty of a face, and true proportions the beauty of a chitecture, as true measures that of harmony and music.

"In the sweat of thy brow shalt thou eat thy bread!" this is a curse which has proved a blessing in disguise.

Instruction ends in the school-room, but education ends only in life. A child is given to the universe to educate.

The shade of faith and the cloak of true godliness are the best equipage for the storm of adversity and the keen armor-piece of selfishness.

Every man should examine his own genius, and adjust with himself what is proper to apply himself to.

It is not the lot of man to be perfectly happy in this world; the only thing which remains to us is to make the best of what we receive and obtain, being as comfortable and happy as our circumstances allow.

Russian Justice.

The question has often been asked whether in Russia men receive impartial justice or not. I shall mention two cases which came under my own observation. The landlord of my house entered an action to recover the sum of $2,000 owed for goods to that amount delivered. Both parties bribed the judge, but the landlord was the most lavish, and he affirmed that he paid $750, after the decision in his favor, on condition that he received the other $1,250; his offer was accepted and he paid the amount after waiting two years for his money. An American gentleman was robbed at a hotel where he was stopping of property to a considerable amount. The servants were all examined by the police and one was selected as the probable thief. The hotel proprietor well knew the honesty of this man and gave him a character which would have exonerate him from the charge. But no, the police determined that he was the thief, and actually flogged him to the comfortable number of 300 lashes. Scarcely was this received before the true thief was discovered to be quite another person; the poor servant, instead of being consoled for the severe flagellation he had received was sent out of the city in order that the business might be forgotten.

The Small Boy.

"Father, did the boy really stand on the deck?" asked Green's hopeful promptly the other day.

"No, Georgie; he stood on three chairs and he put the deck up his sleeve to use as occasion demanded.

"Mamma, is it wrong to say 'it is going to thunder?'"

"Why, of course not, Eddie. Why do you ask such a question?"

"Cause yesterday pa said if you were going to thunder he wouldn't care."

The Sabbath-school superintendent was talking about children playing at the mother's knee. He had grown quite eloquent and affecting and not a few were weeping. "Now Johnny," said he, "does your mother tell you to come and kneel down before her at her knee?"

"Yes, sir, she does," said Johnnie.

"How do you feel then, happy boy with a christian mother?"

"Well, when she holds my head down between her knees and pulls my coat up over my head and wales out her slipper on my basement, I feel"—

The Superintendent had fainted.

"Pray does God tell you what to write in your sermons?"

"Yes, dears of course."

"Then why do you scratch it out so often?"

"Children," said a Sunday-school teacher, looking over the top of her glasses, "we should always be glad and happy for our many and manifold blessings. Even the birds that fill the air with song—hear the one across the street, pouring out his musical praises."

"Yes, ma'am," interrupted a little fellow who was playing fingers on the back of a hymnal. "Them canary seeds."

That's what canaries always do."

Blood quality never appears more visible than when their dress is above their birth, rank, title and its appendages are at best invidious. Thus they do not need the assistance of dress, so be their disciplining and advantages of it, they make their way to fly and more easy.—Sheridan.

How Glass Eyes Wear Out.

The most perfect eyes are made in Thuringia, Germany, and have a more natural appearance than any others. The iris is covered with silver and the blood vessels with gold, and when properly inserted, they will move almost as readily as their natural companions. Of course much depends upon the condition of socket and the state of the muscles as left by the surgeon. Our greatest trouble is the matching of the eyes. You see, eyes wear out, that is the lining about a year or a little over, though occasionally I see one that has served a much longer time. The soft and alkaline solutions of the tear ducts however, have an effect on the surface of the glass, and eventually roughen it, so that a new eye is necessary. He who one, you can see how rough its surface is and how its colors are dimmed.

Rejuvenated Toothbrushes.

An industrious hotel chambermaid who has charge of a large number of rooms can collect from two to six toothbrushes a day, for no article of common use, not even a hat, is so forgotten with such ease as a tooth brush. Of course, the larger the hotel the greater the collection of toothbrushes, and many economical chambermaids add from fifty cents to $1 per week to their salary by the sale of "seconds." When the dealer in "seconds" secures a large bundle of brushes he returns to his little "repairing" room and begins operations. Each brush is plunged into a strong solution of chloride of lime, which in an hour or two makes it as white as snow. Every blotch and dark line on the bone handle has disappeared, the bristles become as bright and glistening as when they were new, and the brush is in fact completely rejuvenated. Then the brush is thoroughly washed in clean, cold water and carefully dried. Within a week afterward it has probably been resold, and is again in use, perhaps in New York City, perhaps in Chicago.

The Obsolete Caster.

The castor of our grandfathers is altogether disused by fashion, relegated to boarding-houses and restaurants. The only shape in which it survives is that of the tiny breakfast caster, with three or maybe four, bottles, and even this is no longer accorded the place in the centre of the table. If, however, you possess a really handsome caster, a relic of wealthy ancestors, you may appropriately display it upon the sideboard with the rest of your plate. For a dinner party, its former place in the centre of the table, is occupied by a fruit and flower piece, or by an elaborate flower-piece, low enough to form no obstruction to the view across the table.

The reason farm hands are so scarce can be accounted for in the fact that a man can't get a moment's rest on the barb wire fence now in use. The old rail fence offered some inducement to a man to engage on a farm, but this barbed wire business don't give a man any show at all.

It is proposed to establish a dairy school in England that shall be superior to anything of the kind in the world. Subscriptions are asked for $500,000, and a farm of 830 acres has been secured.

A Domestic Romance of the Orient.

Ten years ago Yip Ja Shan was a millionaire in Canton, his wealth being estimated at 4,250,000 taels ($5,950,000). He lived in elegant style, and for each of his ten wives he provided a mansion and a retinue of servants. His habits were the same as those of our jeunesse dorée; he frequently paying $50 for a perfumed bath and $400 for a dinner or an evening supper. Beyond this extravagant living he indulged in cards and speculation on the Bourse. His wives, especially wife No. 9, became alarmed and repeatedly besought him to change his ways and give up his speculative practices. He promised to reform, but was unable to carry it into effect. His wives held a council of war, and after a long and thorough discussion among themselves and their friends and their council, left Yip with what property they could lawfully take. Wife No. 6 was the two he and succeeded in absconding with 350,000 taels. Instead of fleeing the realm she went to another part of the city, and there, under the assumed name of Mrs. Woo, bought a hand some residence and settled down to live.

Yip persevered in his evil habits and in another year had lost his entire fortune and become a street peddler. He possessed considerable poetic and literary ability, and made a miserable income by printing and selling his poems and other literary productions at about one cent a copy. Thus for nine years he managed to keep body and soul together, making sometimes ten sales in one week, and sometimes, when he met the friends of his past, two or three thousand. He was not altogether friendless, as wife No. 6 kept her eye on him, and time and time again, when business was very bad and he was penniless, she would buy up his stock of songs and essays at full value.

On the 17th of last month, when his wife and son were celebrating the latter's birthday, he entered the house to sell his latest poems. By accident the servant, an ignorant woman from Yun Nan, showed him into the sitting-room of the house. His son, whom he did not know, bought several copies, and had just paid him, when the door opened and wife No. 6 appeared. The recognition was mutual, and after ten minutes of explanation and promises to never return to his former practices, a reconciliation was effected. Yesterday a written agreement was filed in the Yamen's office (or Mayor's office), whereby Yip was assured an annual income of 10,000 taels, subject to revocation by his wife and son in six months' notice in writing to Hang Qua, the banker, who has assumed the trust. He has given up, however, poetry as a retail business, and, when seen by our editor, was attired in silk worthy of a Viceroy of Sankeen.

What a Cent Grows To.

A cent seems of little value, but it is only doubled a few times it grows to a marvelous sum. A young lady in Portland caught her father in a rash promise, by a knowledge of this fact on her part. She modestly proposed that if her father would give her only one cent on one day and double the amount on each successive day for just one month she would pledge herself never to ask of him another cent of money as long as she lived. Not stopping to run over the figures in his head, and not supposing it would amount to a bargain, he was glad to accept the offer at once, thinking it also a favorable opportunity to include a possible marriage dowry in the future. On the twenty fifth day he became greatly alarmed, lest if he complied with his own acceptance he might be obliged to be "declared a bankrupt on his own petition." But on the thirtieth day the young girl demanded only the pretty little sum of $5,373,736.12! The astonished merchant was only too happy to cancel the claim by advancing a handsome cash payment for his folly in allowing himself to give a bond—for his word he considered as good as his bond—without noticing the consideration therein expressed, and by promising to return to the old custom of advancing another sums daily until otherwise ordered. If the old gentleman had fulfilled his promise, his daughter would have had, upon the receipt of the thirtieth payment, the snug little sum of $10,736,517.43.

Kaiser's Dog and a Great Man's Ears.

Representative Hewitt is much annoyed by the barking dog of Mr. Kaiser, a baker, and has once before made complaint upon the subject to the District Commissioners. As under the law of the District, laid down in the case of R. J. Sedgs, "a butting goat and a barking dog stand on the same platform," neither can be touched by the police unless in a public place. Commissioner Edmunds wrote Mr. Hewitt to day: "Sir: Your note of the 4th instant received. Your former note was sent to Major Dye, with request that all possible moral suasion be used to induce Kaiser to dispose of that dog. But as I had not much confidence in that I did not mention it in my note to you, lest you might indulge in a delusive hope. I sent your last note to Major Dye and renewed the request."

Travel by steamer is less than remaining at home. The records of the year past show that only one person out of 2,636,923 that travelled by steamer lost their lives thereby.

The tonnage of the Great Eastern has been computed to be greater than that of Noah's ark.

DEAD HORSES.

The Various Articles Made Out of Defunct Equines.

A crowd had gathered on a South-side street corner where a horse with a broken leg had been shot. As the owner stood ruefully surveying his loss a fat, dark complexioned man elbowed his way up and said as he smiled grimly:

"Say, mister, I'll cart that horse away if you will give it to me. Is it a bargain?"

The owner pondered a moment, looked around at the crowd, and remarked:

"The animal is no use to me, and I guess you can have it, but I'm obliged if I know what you want with it. You can have it if you will tell me."

"All right. You see a dead horse represents considerable money some, and when I get one I am going to drop onto it every time. I'd haul the animal out to my place, where I will skin it, and tan the hide, or else sell it raw to one of the tanneries. It will then go to some boot and shoe firm, who will proceed to make it up into shoes. The leather being soft and water-proof makes up nicely and commands a fancy price.

"Shoes made of cordovan, as the leather is called, are considered the proper thing by swells and sell well. The tail, when it is long and bushy, can be made into a nice horse brush or switch for ladies. To make a nice switch, I take out the bone from the tail and tack the skin onto a handle, and there we have it, all ready for use as soon as it gets dry."

"But what do you do with the remainder of the body—the bones and flesh?"

"Oh, they come in handy. I raise lots of hunting dogs. Of course, if I were to buy beef for them it would cost me a small fortune. When I get or buy a dead horse I save some of the meat, feeding the dogs on that. They thrive on it, and it don't cost me much.

"The hoofs I sell to some glue factory, where they are boiled down and made into glue. Do I make use of the bones? Of course I do. Sometimes I grind them up and sell them as fertilizers. Ground bone is the stuff to spread on your garden if you want to raise good crops. When I am busy and wants to dispose of them I sell them to some button factory. They make buttons, large and small, out of bones. I have seen some knife-handles made from bone, but it cracks easily and is not used much. Buttons are more generally made from horse-bones than anything else in that line.

"Now if you want any meat for your cats let me know, and I will supply you," but the former possessor of the horse did not seem to relish the idea of his cats being fed on horse-flesh, and declined the honor with thanks.

The Mysterious Bag.

Make two bags, each about a foot long and six inches wide of some dark material, and sew them together at the edge, so that one may be inside the other. Next make a number of pockets, each with a cover to it, which may be fastened down with a button and loop. Place these about two inches apart, between the two bags, sewing one side of the pocket to one bag and the other side to the other. Make slits through both bags about an inch long, just above the pockets, so that you can put your hand in the bags; and, by inserting your thumb and finger through these slits, you may obtain entrance to the pockets and bring out of them whatever they contain. It is, of course, necessary that a variety of articles should be put in the pockets. Before commencing the trick you may turn the bag inside out any number of times, so that your audience may conclude that it is quite empty. You can then cause to appear or disappear any number of articles of a light nature, much to the amusement of your audience.

Pearl Fisheries on the Pacific Coast.

The pearl fisheries of the Gulf of California are rising into importance and may become as rich as those of Ceylon on the Bahrein Gulf. About two years ago President Gonzales gave a concession to an American company, which has since taken out more than $1,000,000 in value of pearls and mother of pearl, among the former one of ninety-three carats, perfect in form and color, just sent to the London market, and doubtless destined to ray forth its tender opaline gleam from some royal or imperial necklace, and be henceforward quoted in jewelers' manuals as one of the rare and costly jewels of the world. These pearl fisheries of the Middle Pacific waters are likely to become a source of as much revenue as the great seal fisheries of the North, and to last a good deal longer. The Ceylonese pearl beds have been productive for many centuries, and so have those of the Persian Gulf, without the annual product being diminished, and there is no reason why those of the California waters should not be equally fertile and enduring.

A pie in 1770 was made of two bushels of flour, twenty pounds of butter, four geese, two turkeys, two rabbits, four wild ducks, two woodcocks, six snipes, four partridges, two neats' tongues, two curleys, seven blackbirds and six pigeons. A pie can now be had from one slice of dried apple and a little piece of soggy dough. Such is the march of improvement.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, MARCH 14, ... 1885

C. Mulholland,
EDITOR & PROPRIETOR.

THE COUNTY GOVERNMENT BILL.

Much against our expectations, and against the anticipations of many disgruntled and chronic grumblers, who are never satisfied with anything after it is fixed, or with any other person, except their own diminutive selves, the bill amending the County Government Act, known as Assembly Bill, No. 72, fixing the salaries of county officers throughout the State, has passed the Legislature, and no doubt by this time it has been approved by the Governor and has become the law of the land. At this our taxpayers should rejoice, as it certainly rescues us from financial ruin and saves the county from bankruptcy.

The salaries established by the County Government bill of 1883 which fixed the salaries of county officers of Class Forty-six, and which class included Inyo county, and under which our present officers hold, were as follows:

County Clerk, per annum,		$3 000
Recorder,	" "	2 000
Auditor,	" "	1,000
Sheriff,	" "	5,000
Tax Collector,	" "	2 000
Treasurer,	" "	1,500
Assessor,	" "	3,500
District Attorney,	"	1,500
Coroner,	" "	400
Administrator	" "	400
Supt. Schools,	" "	1,000
Five Supervisors, each $300		1,500
Making a total for officers of		$22 800

Under the law as now amended the county will pay to these officers the following salaries for their services:

County Clerk, per annum,	$1,600
Recorder, " "	800
Auditor, " "	200
Sheriff, " "	4 000
Tax Collector, " "	1 000
Treasurer, " "	1,000
Assessor, including deputy,	1,200
District Attorney, annum,	900
Supt. Schools, per annum,	400
Five Supervisors, $6 per day, not exceeding $300 each per annum,	1,500
And mileage at the rate of 30 cents per mile from their place of residence.	
Coroner and Public Administrator and Surveyor, such fees as are now allowed.	
Making a total for officers of	$12,600

per annum, under the law as amended, being a reduction of $10,200, and a saving to the county of that much money.

It was only by the most superhuman exertions and the exercise of a high degree of strategy upon his part, that Mr. Reddy was enabled to secure the passage of the bill, and he and Mr. Van Voorhies, and others, are certainly entitled to the gratitude of our people for relieving them of this great incubus

◆◆◆

ENGLAND is the richest country in the world. She became such by fostering all kinds of manufactures. Liberal subsidies were paid, and taxes were so arranged as to favor the making of all kinds of manufactured articles in England, and to ensure the shipment of raw material into England, and carrying away the manufactured products in English built ships. The United States has the raw material that England had to buy; we had better skilled labor than England, and by pursuing the same policy of encouraging home industry, and subsidizing American shipbuilding we can far outstrip England in wealth and prosperity. A premium should be paid to every one who would load an American built ship with American productions, carry the same to a foreign market, and sell it. If this policy were pursued, there would soon be no complaint of overstocked market at home.

◆◆◆

AT Victoria, B. C., last Saturday the bill to prevent the importation of Chinese into that Province passed the Legislature. It imposes a fine of $50 on every Chinaman coming into the country except those who can prove themselves actual residents. It also imposes a $200 fine on any one, assisting a Chinaman to land. If the Dominion government does not veto the bill it will go into effect at once. Such a beneficial measure will have a tendency to check the inroads of the heathen to this coast and will prove a protection to California.

◆◆◆

A little war cloud is gathering between England and Russia upon the question of the rights of each in the Afghan country, a territory owned by neither of them. The cloud is small just now but the day is not far distant when there will be a gathering of the hosts of the two governments that will shake all Europe and convulse portions of Asia. Both of those great powers are ambitious, and the world is really too small for both, and sooner or late there must be a new map made for their possessions.

◆◆◆

THE "Trumpet Call" an adventist paper published at Los Angeles, fixes September 30, 1885, as the date of the final winding up of terrestrial affairs.

THE NEW ADMINISTRATION.

President Cleveland's inauguration on the 4th instant was on a grander scale and was more impressive than that of any of his predecessors. On the following day the President made known his appointments of Cabinet officers, as follows, brief sketches of each being here given:

Thomas F. Bayard, Secretary of State, is a native of Delaware, and has been a United States Senator since 1869 from that State, resigning the office to accept his present position. He is 56 years of age.

Daniel Manning, Secretary of the Treasury, has never held an elective office. At present he is President of the Albany *Argus* Publishing Company, having risen from a printer's apprenticeship in the same office.

Wm. C. Endicott, Secretary of War, is a descendant of John Endicott, Governor of Massachusetts in 1644-65. He is 58 years old. He was a member of the Supreme Court of Massachusetts from 1873 to 1882, when he resigned on account of failing health.

Wm. C. Whitney, Secretary of the Navy, is 45 years of age, and a resident of New York. He is an accomplished lawyer and politician. The only office ever held by Mr. Whitney was that of Corporation Counsel for New York city a number of years ago.

L. Q. C. Lamar, Secretary of the Interior, is a resident and U. S. Senator of Mississippi, and is the oldest member of the Cabinet, being nearly 60 years of age. He was a member of the 35th and 36th Congresses, but resigned to participate in the Secession Convention. He was, after the "reconstruction," elected to the 43d and 45th Congresses, and in 1877, to the Senate. He is a man of broad and liberal views.

Wm. F. Vilas, Postmaster-General, can trace his lineage to the family of Villiers, famed in French history, and to the time of Henry III. He is now 45 years of age; and a resident of Wisconsin. During the war he raised a company of volunteers, being finally promoted to a colonelcy. The only office ever held by Mr. Vilas was that of Representative in the Wisconsin Legislature, where he was the acknowledged leader of his party.

A. H. Garland, Attorney-General, is from Arkansas. He took a prominent part in the different Confederate Congresses, but was in 1876 elected to the U. S. Senate, and still held the office at the time of his appointment. Since the war he has been one of the most loyal of Southern Senators, and has contributed as much, if not more, than any other man, either North or South, toward burying sectional animosities and restoring harmony and national unity between the States.

By profession, all of the new Cabinet but one are lawyers. Three are from the South, two from New York, one from Massachusetts, and one from Wisconsin. The new Secretary of the Treasury is in accord with Mr. Cleveland on the silver question.

◆◆◆

GEN. Grant is in very poor health, and is suffering from a cancer on his tongue and neuralgia. His physicians declare that he is in a very critical condition and there is but little hope of his recovery. He still works occasionally on his books which is to be a history of the war but it is very doubtful whether he will ever finish it. While Grant may not be, as some papers call him, "the greatest American of this century," he is without doubt the foremost soldier of his time, and he will ever hold a high place in the American heart. His death will be felt as the nation's loss.

◆◆◆

WE have received from Thos. L. Thompson, Secretary of State, a pamphlet giving complete lists of the officers of the Executive, Judicial and Legislative departments of the State and of the several counties, and also a full list of Notaries Public, as well as the vote of each county, by precents, for Congressmen and Presidential electors at the late election, and the population of the State by counties. The whole forms a valuable work for those interested in facts and figures.

◆◆◆

Up to yesterday evening no advices of the Legislature's adjournment had been received here. The chief contest is now over the irrigation bills, which are being stubbornly fought.

◆◆◆

THE North Star mine, at Coryville, Esmeralda county, Nevada, is producing ore from a five foot ledge which is said to assay from $75 to $225 per ton

◆◆◆

A. C. Pratt, late of Genoa, Nevada thinks he has found a vacancy in the newspaper business at Carson, and intends starting another paper there.

◆◆◆

Smallpox has appeared among the Piutes at Austin, Nevada. The Indians are greatly excited.

◆◆◆

IT is estimated that there has been a decrease of $3,000,000 in the public debt during February.

◆◆◆

THE deadlock in the Illinois Legislature still continues.

Ben Butler's conduct as Governor of Massachusetts is being investigated by a committee, and it is charged that as president and treasurer of the National Soldiers' Home he has received $23,386 more than he ever accounted for. Ben says he can explain the discrepancy in a satisfactory manner.

◆◆◆

CONGRESS in its last hours executed the will of the people, and condoned some of its own offenses by passing the Grant retirement bill. President Arthur must always experience a feeling of honest gratification and pleasure that it was permitted to him to approve so just a measure.

◆◆◆

THE people of the Pacific coast find some compensation for the attitude of President Cleveland on the silver question, in his clear and emphatic opposition to the influx of Chinese. Under Mr. Arthur there was a steady effort to defeat the purpose of the anti-Chinese acts of Congress.

◆◆◆

By the new Oregon liquor law the price of license is raised from $100 to $300 a year for spirituous liquors, and fixed at $200 a year for malt liquors. The bond is increased from $500 to $1,000, and its conditions include a proviso that no liquor shall be sold on Sunday.

◆◆◆

A Tacoma (W. T.) syndicate, which owns large beds of coal lands northeast of Lake Whatcom, is negotiating with St. Paul parties for the immediate opening and development of their mine. About 1,000,000 tons of hard bituminous coal are calculated to be in sight.

◆◆◆

ON the 4th inst., the U. S. Senate met in special session at Washington, pursuant to a proclamation of President Arthur's to that effect. The newly elected Senators present presented their credentials and and were sworn in in due form.

◆◆◆

D. M. Demaris, in behalf of the people of California, has brought suit against the following railroads for delinquent taxes for 1884: California Pacific, Northern Pacific Coast, Southern Pacific, San Pablo and Tulare, and Central Pacific.

◆◆◆

There is strong talk of making Major Dennis a candidate for Governor of Nevada. No doubt the people of that state feel that none but newspaper men could redeem the state from the shame of having such a Governor as Jewett W. Adams.

◆◆◆

IT was most fitting and proper that before death shall close the career of General Grant, his name should be restored to the army list of the United States. Congress honored itself by making the restoration.

◆◆◆

REGULAR trains commenced running March 2nd, on the Nevada and California railroad from Reno to the Junction a distance of 37 miles. For the present but one train a day runs over the road.

◆◆◆

THE newspapers of Oregon are bitterly denouncing their State Legislature for not having elected a Senator before adjourning.

◆◆◆

THE British Columbia militia are are drilling twice a week, in anticipation of their services being required by England.

◆◆◆

President Barrios has issued a decree proclaiming the State of Central America to be united in one Republic.

President Arthur's All-Night-Suppers.

The President has a reputation outside of Washington for being a liberal entertainer. This reputation is not deserved. He is the only President—in fact he is the only person in this city—who has ever given a card-reception without offering some form of refreshments to his guests. There has been a good deal said about the penuriousness of the Hayses, yet Hayes never gave a card-reception at the White House without furnishing ample refreshments for all of his guests While he did not furnish liquor of any kind, yet there was great bowls of sour lemonade, enough to satisfy any ordinary thirst. Mr. Arthur does not even furnish a glass of cold water. A Kentucky member who was at the White House the other night, said that he thought it would be a good idea to have the President given a pump and a tin dipper so that it might be set up in the conservatory for the convenience of the guests who ventured out to his card-receptions. The President, however, aggravates this lack of attention to his guests by singling out a dozen or more of his particular friends from those who are present inviting them to remain with him for a late supper. As the hour approaches for the supper the other guests are fairly hurried out of the White House. The most prominent and distinguished, if they have not been invited to the all-night supper, are hurried away to make room for the pleasure of the evening to begin. These suppers often continue until 4 o'clock in the morning. Representative Dorsheimer recently made a boast that he drank two bottles of champagne and one of whisky at one of the recent all-night suppers of the President.

With law business everywhere diminishing, the number of lawyers in New York State has increased 17 per cent in seven years. The number of doctors has increased 3 per cent.

Must Have a Name.

The golden age of periodical literature was five-and-twenty years ago, or thereabouts. Then editors were keenly on the lookout for new talent. Now the supply is greater than the demand; the crowd of writers is largely augmented by many who do not depend on their pen for a living. These can work with more ease, and have more leisure for study. Editors are so worried by a mass of correspondence that few of them care to sift the matter offered to them, mostly preferring to lean on known names. Then the competition in periodicals is so great that one only gets half a guinea for matter which, twelve years ago, was worth a guinea. The struggling author now may send out twenty manuscripts, and fifteen will miss fire altogether, and of the five accepted perhaps three will not be paid for. Half of the rest will not be returned to him, but go into the waste-paper basket. The struggling author works hard, and most of his work goes for nothing. He lives on hope, and the postman's knock at his door more often brings a pang than a joy to his heart. Let him be ever so clever, if he have no name, or no regular engagement on a journal, he cannot make a living by mere fugitive writing. If he is at all a good writer he is unfit for any other work; from the years of study he has had to perfect himself in an art that brings him no return, he has been unable to gain knowledge of any other trade or profession. Even if capable of quickly mastering the details of business, no one will engage him because he has no experience. If his pen fail him, what can he do? Only some luminous idea or lucky chance can save him from starvation. If he can write stories badly enough for some of the penny journals he will get perhaps 8l. for one which takes him a month to write. For a three-volume novel, which no man can invent and write in less than six months, he will get 30l. perhaps. And as for dramatic authorship—no one will read the play when it is written, much less produce it. If he writes a five-act melodrama, and likes to hang about after managers of outlying theaters, he may get an offer of 5l. for the entire right of the work, and then be asked to pay the cost of the all-important "posters." These are facts. There is no harder career than letters. Even men who have had money have taken years to establish their reputation. Disappointment, despair and starvation are all that await the poor author. He is one of the most pitiable figures in the pathetic group of unseen poor. His higher talent and greater sensitiveness make him suffer the more keenly. Let no man, however talented, think to earn a living by writing alone. If he must earn a living by letters, let him rather be a postman.

A City's Disadvantages.

Philadelphian—"Unhandy city! Why, my dear sir, there are cars on every street and the city plan is as plain as a checker-board. You certainly would not have it all cut up like the lower part of New York."

New Yorker—"I certainly would. The idea of living in a city where you have got to tramp around a whole square every time you see your tailor coming."

Education of the Future.

Americans have now pretty generally gotten over the idea that their public school system is so nearly perfect that it cannot well be improved. Nor is the belief now so frequently expressed that education by itself necessarily makes people wise and good. We are sensibly getting over our "spread eagleism" in this as in so many other matters.

There are two directions in which a reform in the system of education seems now to be both probable and possible. These are the recognition of industrial or manual education and physical culture, in some form or other, as necessary elements of a complete system of education. It is a well-known fact that a large number of the pupils in our public schools are obliged to go and fight the battle of life for themselves at an early age; and in school they learn little that is of any practical use to them, and, with all their nice catalogues of facts, they are frequently less capable of making an honest living than their former classmates, who long ago left school to become grimy apprentices or burly butcher boys.

The industrial supremacy of this country in the markets of the world depends upon the skill of our handicraftsmen in the industrial arts; and this skill would be largely fostered and developed by the establishment of a few great industrial schools in the large manufacturing cities. Such a school is seriously talked of in Philadelphia; and there is no reason why New York should not also have a great institution, where the elements of all the mechanical arts could be learned. England is fully alive to the importance of this matter; and the industrial education which she now gives to the children of paupers and criminals serves the double purpose of training these children to be good citizens and of adding valuable recruits to her great industrial army. The day is coming when there will be a life and death struggle between Great Britain and the United States for the industrial supremacy of the world, and, if we are wise, we will prepare ourselves for the great conflict.

Besides all this, an industrial training will do what a merely theoretical training will not do. It will act as a preventive of crime. Of the 1014 prisoners in the eastern penitentiary of Pennsylvania, only seven are mechanics, and the English home secretary states that eighty per cent. of the vicious boys who have passed through industrial schools and have learned some honest trade have been entirely reformed. As a matter of pure economy, therefore, not to speak of philanthropy, it would be a wise thing to build more industrial training schools and save some of the money now spent on prisons and reformatories.

One of Mark Twain's Early Struggles.

I wonder if Mark Twain in his prosperity and fame, when he can fill a hall on short notice, remembers the first lecture he delivered in St. Louis. It was a good many years ago, before Twain had made a national reputation. He was in St. Louis, having just come from California, and was scarcely known to any one. One day a young business man, who was running a mission school in the northern part of the city, announced to his friends that he was going to have a good lecture at his school. They asked who was going to lecture and he said Mark Twain. This was Hebrew to most of them. Twain had a lot of his usual style of posters printed, announcing the lecture and stating that a lot of prizes would be given, among which were ten smooth auger holes and others of a similar funny kind. The evening came and went and the young man's friends asked him how the lecture came off. "Oh, not very well," said he, "we had bad weather and the people somehow wouldn't come."

"How much did you take in anyhow?"

"Only $8," was the mournful reply.

The growth of the oyster industry in Connecticut has been remarkable. The first steamer that was used in this trade was put on less than ten years ago, and now there are forty steamers, with an aggregate capacity of 36,720 bushels a day. Four more large new steamers are building for the spring.

BAK NG POWDER

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall St., N. Y.

LOCAL DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No. 321, F. & A. M., will be held on the Saturday on or preceding the full moon of each month, during the ensuing Masonic year, as follows:

Saturday	January 24
"	February 28

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, MARCH 14 .....1885.

Quite a number of Independence people will attend the fun at Big Pine Tuesday.

GARDEN work is far advanced around Lone Pine. Orchards are now in full bloom and look beautiful.

GLANDERS.—This terrible disease now exists at Lone Pine. A horse belonging to a Chinaman is bad with it, and no steps have yet been taken to destroy the animal.

CHANGE.—Charley Levy has removed his saloon fixtures to the Whitney House bar room, Lone Pine, which division of that hotel he will hereafter superintend.

EGGS WANTED.—Knapp & Laws, of Hawthorne, inform us that they will pay 25 cents per dozen for fresh eggs in good cases, delivered at C. & C. stations; one-half cash and one-half trade.

ASTRONOMICAL.—The scientific ones will have to get up before breakfast Monday morning if they wish to see the eclipse. It is said that a new comet is faintly visible in the northern sky in the early evening.

BURNED.—Last Monday the clothing of a little daughter of A. L. McGee, on Bishop Creek, caught fire in some way, and in extinguishing it, Mrs. McGee was severely burned. No further particulars are given.

TO CLOSE.—The six months term of the Milton district (Camp Independence) school will close next week. Speeches and the usual exercises will be given. Miss Yancy, the teacher, will soon return to her home at Bishop Creek.

IMPROVEMENT.—Walter James, Road Overseer in this district, is doing much good work in repairing broken culverts, draining the roads and putting new culverts and bridges in at different points, and is proving himself a very efficient officer.

ST. PATRICK'S DAY.—The "17th of Ireland" will be celebrated at Big Pine by a baseball match between the "Jutebacks," of Bishop, and the "Haymakers" of Big Pine. The last game was won by the Big Pine club. Considerable interest is manifested in the match.

BEVERIDGE.—Reports from Stewart's mine in Beveridge are very favorable. The ledge is strong four wide, and opening up in a most encouraging way. The ore continues to be truly as rich as where first struck, is all free milling gold bearing, and beyond question will pay.

HOTEL CHANGE. — Under a change made yesterday Mr. H. Levy becomes the landlord of the Blaney House from and after to-day. He will close his present place of business, and devote himself entirely to the demands of his new venture. Due announcement of the change will be given in the advertisements next week.

NEW DISCOVERIES.—Reports are current of new discoveries of rich ore bodies in the mines at Kramer, San Bernardino county. The Cuisco *Prod* says: "Messrs. Caleff and McAllenry have made some new discoveries in a hitherto unknown portion of the camp, and the 'Menagerie' group of mines is the result. These claims prospect very high in both gold and silver, and recent developments indicate very rich carbonate deposits."

A PAYING MINE.—Messrs. Alexander, Kehoe & Barnes shipped 61,335 pounds of ore from the White Hill mine to the Selby Smelting and Lead Co., S. F., from which they lately received the following returns: Assay value, per ton—silver, 7.83 100 ounces; lead, 68½ per cent; gold, a trace. Net value per ton $86; deductions from gross value, 20 per cent loss for lead, and 12½ per cent loss for silver, in smelting, and $20 per ton, expense of working. This mine is in a paying condition, for the simple reason that its owners, instead of letting their picks rust while they wished for capital, went to work in earnest to develop it. There are many others which need only the same treatment to pay equally well.

BETTER THAN WISHING.—Some miners are always wishing for capitalists to come along and help them develop their mines. Wishing don't develop anything. The miners at Sweetwater, Mono county, do better; one who has been up there says there are about twenty miners in the camp, all working for themselves and making more than wages. The ledges have about the same dip as those on the Comstock, but carry very little gold. The ore is free milling, and averages $85 per ton in silver. It is packed eight miles to the mill on mules. There is plenty of wood and water close by, and the miners will soon be able to put up a mill of their own convenient to the camp, which will greatly reduce the cost of milling.

Joyfully Astonished.

Mr. James Blunt, Deputy Sheriff Baltimore, Maryland, writes: In an experience of thirty years I have become acquainted with numerous so-called specifics for coughs and colds, but never before experienced such surprising efficacy as was obtained from the Red Star Cough Cure. I was attacked with a severe deep-seated cold and cough. I suffered for some time, and tried this valuable remedy. I was completely cured by the use of one bottle.

THE Nevada Legislature passed a bill prohibiting treating in any public saloon or place of amusement.

Personal Mention.

County Assessor John C. Irwin is going the rounds of the county.

Mr. E. F. Leete, of Reno, Nevada, arrived here Monday evening on a "tour of inspection."

Miss Mary Hessian, of Big Pine, who has been the guest of Miss Addie Lewis, went home Thursday, accompanied by Miss Lewis.

Frank Silva is getting out some good ore from the Columbian mine at Darwin.

Charley Hillman died last Sunday.

Mrs. Shepherd has gone to Stockton, on a visit to her mother; she went by way of Mojave.

J. J. Gunn came up from Darwin last Monday.

Mr. Runels, an old mine surveyor on the Comstock, went down to Keeler last Monday. As he had his surveyor's outfit with him he is probably making surveys in the Darwin district.

Philip J. McGrath has been appointed Supervising Mail Clerk on the C. & C.

Mr. J. W. Symmes is seriously ill, pneumonia being the cause. Dr. W. H. George of Bishop Creek, was sent for Thursday.

WHITE ASH.—Three years ago Mr. Ezra Goodale received from the east a few plants of white ash. The plants were planted at his farm at Black Rock, and are thriving very well. White ash is a valuable timber, and this experiment proves that it can be grown in Owens valley. Mr. Goodale's sugar maples are growing rapidly, and have already attained quite a respectable size.

Oranges, lemons, and all kinds of nuts; a large supply just received by L. Woods.

THE Nevada Legislature adjourned *sine die* last week.

More vessels are now on the lakes than ever known before.

The "Old Masters."

In several principal towns of Italy there are regular workshops for the forgery of the masters who formerly painted there. Thus, in Bologna, the imitations are chiefly of the Caracci and their followers, as well as of Carlo Dolce and Sassoferrato; at Venice, of Titian and Giorgione. In Milan and Ferrara, the fabrications after the schools of Luini and Garofalo are especially successful, as well as those of Marone's beautiful portraits. Old and ruined panels are chosen, and either restored on the original design or, if that has been obliterated, they are prepared and painted afresh. Sometimes the portions that have suffered least are allowed to remain, and new bits of varied composition are ingeniously dovetailed into the piece, which is then begrimed with varnish, the better to puzzle too curious observers. In all these cases, the treatment of some famed master is so exactly imitated as often to baffle detection, even where suspicion has been roused by the coarse appearance of the work; and the dissimilarity of surface often escapes minute criticisms out of respect to the warm channels visible behind. The forgeries thus executed are issued by a class of Italian dealers, who, sometimes in the disguise of gentlemen, lend themselves to the imposition, and share its profits.

Sydney Smith on Happiness.

I have a contempt for persons who destroy themselves. Live on, and look evil in the face; walk up to it and you will find it less than you imagined, and often you will not find it at all, for it will recede as you advance. When you are in a melancholy fit, first suspect the body appeal to rhubarb and calomel, and send for the apothecary; a little bit of gristle sticking in the wrong place, an untimely consumption of custard, excessive gooseberries, often cover the mind with clouds and bring on the most distressing views of human life. I start up at 2 o'clock in the morning after my first sleep, in an agony of terror, and feel all the weight of life upon my soul. It is impossible that I can bring up such a family of children; my sons and daughters will be beggars; I shall live to see those whom I love exposed to the scorn and contumely of the world! So I argued, and lived dejected and with little hope; but the difficulty vanished as life went on. My daughters married well; I had two or three appointments, and before life was half over became a prosperous man. And so will you. Friends start up out of the earth; time brings a thousand chances in your favor. Nothing so absurd as to sit down and wring your hands because all the good which may happen to you in twenty years has not taken place at this precise moment.

New Shapes in Cups and Saucers.

The latest shape for coffee is square—the latest decoration wild flowers, apparently growing up from the base of the cup, all around it. Tea cups, for 5 o'clock tea, vie with after dinner coffees in beauty, and come in the costliest porcelains. Fortunately for people who cannot afford such luxury, the artistic revival is manifest in the cheapest wares, and even earthen jugs and bowls are no longer ugly. Very pretty sets may be had quite cheaply, but the wisest choice for every-day use by people of small means, is plain white French china, which, when broken, may easily be replaced. With this may be used any bits of colored glass or china, which one may possess. A majolica dish or jug, bread plate or salad bowl, gives color at small expense, while the gay Russian bowls in red and gold answer admirably for crackers of fruit.

Household Hints.

Rice waffles for breakfast are made of one quart of flour, half a pint cupful of boiled rice, three eggs, and a lump of butter. Make into a batter with milk, and bake in waffle irons. Salt is, of course, to be put in according to your taste.

Ham pickle.—To one gallon of water take one and one half pounds of salt, one-half pound of sugar, one-half ounce of saltpeter and the same of soda. Boil and skim. Increase the quantity if you desire it.

Beets if small can be sliced and dressed with gravy, just as young beets in the spring are served, with a little milk and butter, pepper and salt, and flour enough to thicken. Beets can be arranged prettily as a garnish or pickled tongue, by cutting them into thin slices, and cutting the edge with a cooky cutter.

Friendly Loaves.—Beat half a dozen mealy potatoes with a quarter pound of grated ham, two eggs, a little butter and a little cream, taking care not to make it too moist; form it into balls or small loaves, and fry them a nice light brown; they should be fried in butter. Pile them on a napkin and serve with a garnish of fried parsley.

To prepare deviled crabs pick the meat into fine bits, add one-third as much bread crumbs, some hard boiled eggs, and lemon juice to flavor season with salt and pepper, butter and cream, and put into a shallow earthen dish and brown in the oven. The quantity of eggs is indefinite; the dish requires about the same number that a salad does.

The oblong chip baskets that can be bought for 20 cents each at fruit stores, can be made into pretty scrap or work baskets by staining them with red or blue and lining them with silk or satin, tying a ribbon bow on each handle. Small baskets of the same kind, without handles, when gilded inside and out, are very pretty to stand on a bureau for catchalls.

A great deal of artistic thought is expended upon lamps, and a truly beautiful lamp is a joy for a long time. Pretty shades to fall over the plain porcelain shade are made by gathering a strip of red satin, and, when full enough to hang gracefully, sew it together in a "fine seam" and trim the edge with lace.

Scrapple.—Boil eight pounds of pork that will not do for sausage in four gallons of water; when tender, chop it fine, strain the liquor and pour it back into the pot; put in the meat, season with sage, salt and pepper to taste, and stir in a quart of corn meal; after simmering a few minutes, thicken it with buckwheat flour, very thick; it requires very little cooking after it is thickened, but must be stirred constantly.

For burns and scalds there is nothing more soothing than the white of an egg, which may be poured over the wound. It is softer as a varnish for a burn than collodion, and being always on hand, can be applied immediately. It is also more cooling than "sweet oil and cotton," which was formerly supposed to be the surest application to allay the smarting pain.

Broiled kidneys are nice for breakfast. Be sure that they are fresh; cut them open evenly so that they will be uniformly cooked; remove the skin and broil, placing the inside downward; turn them once or twice. Season with pepper and salt, and a lump of butter on each piece. Serve on buttered toast, squeezing a little lemon juice over each piece of meat. Serve very hot.

To prepare browned oysters on toast open two dozen large oysters, keeping them separate from their juice. Then mix smoothly the yolks of two eggs with a little flour; bread the oysters and season with salt and pepper; then dip them separately in the mixture of eggs and flour, place them in a saucepan and brown in a little clarified butter.

Stuffed ham. Select a nice ham and broil; when done let it cool before you skin and trim it. Prepare a stuffing of bread crumbs, butter, pepper, parsley, thyme and celery. Begin at the hock and make incisions with a large knife, about an inch apart, and put in the stuffing as you draw out the knife. Rub a smooth paste of flour and water together and spread thickly over the top, put the ham in the oven and brown well but slowly. To be eaten cold.

When making a sofa-pillow of the crazy patchwork be careful and put the brightest and most striking pieces near the center. When the cushion is up made the effect is quite different from what it is when it is spread out flat, and it is of more consequence that the center should be handsome than that the corners should. This, when reduced to writing, looks like a foregone conclusion; but it is not, as an unfortunate pillow maker can testify.

A very good way to make caper sauce to serve with roast mutton: About a quarter of an hour before the the meat is done, melt two tablespoonfuls of butter in a saucepan, stir into it one tablespoonful of flour, then add half a pint of mutton broth, half a pint of milk, season with pepper and salt; cook until the flour is thoroughly done, then just before serving add two and a half tablespoonfuls of capers. When melting the butter do it slowly, for if it gets brown or scorched, the flavor of the sauce will be spoiled.

A pretty way to make a shade for the lamp, or rather a cover for the porcelain shade, is to take a narrow strip of red silk gather it quite full at each edge, drawing it close at the top so it will fit the shade, then trim the bottom with antique lace; this should be gathered, but lie smoothly over the shade; then with heavy embroidery silk draw in a fringe all around the lace; this should be thick and close, and should quite conceal the shade.

Dinner-night—Strong butter.

[illegible] an aged millionaire who has on several occasions given his heirs high hopes—high hopes always dashed by his recovery.

A State Governed By Women.

Among the colonial possessions, or, more correctly, dependencies, of Holland, there is a remarkable little State which, in its constitution and original costume of its inhabitants, surpasses the boldest dreams of the advocates of women's rights. In the Island of Java, between the cities of Batavia and Samarang, is the kingdom of Pantam, which although tributary to Holland, is an independent State. The sovereign is, indeed, a man, but all the rest of the government belongs to the fair sex. The King is entirely dependent upon his State council. The highest authorities, military commanders and soldiers are, without exception, of the female sex. These amazons ride in masculine in the masculine style, wearing sharp steel points instead of spurs. They carry a pointed lance, which they swing very gracefully, and also a musket, which is discharged at full gallop. The capitol of this little state lies in the most picturesque part of the island in a fruitful plain, and is defended by two well-kept fortresses.

It is a sort of joint affair—this opium smoking.

The "higher" education of woman which we are in favor of is that which will produce a better class of highered girls.

NOTICE TO CREDITORS.

IN THE SUPERIOR COURT of the County of Inyo, State of California. In the matter of the estate of W. A. Baker, deceased. Order of Publication of Notice to Creditors.

IT IS ORDERED, That notice to the creditors of W. A. Baker, deceased, be given by publication in the Inyo Independent, a newspaper printed and published in the County of Inyo, at least once a week for four weeks. Dated February 21, 1885.

JOHN HANN, Judge of Superior Court.

ESTATE OF W. A. BAKER, DECEASED. Notice is hereby given by the undersigned, Executrix of the estate of William A. Baker deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers within four months after the first publication of this notice to the said Executrix, at her residence at Big Pine, in the county of Inyo.

Dated, February 24, 1885.

FANNIE F. BAKER, Executrix of the Estate of W. A. Baker, deceased.

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNTY of Inyo, State of California.

A. C. HARRIS and N. TILAS RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. BARTLE, E. SIMMONS and DAVID CONWAY, doing business under the firm name and style of CANDLE MINE Lead Mining Company, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County.

EDDY & ORMSBY, Plaintiff's Attorneys.

The people of the State of California, to the above named defendants, S. S. Bartle, Simmons and David Conway, we command you that you appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county, or within thirty days if served elsewhere, within thirty days.

The said action is brought to recover judgment on three contracts and to foreclose three mortgages, to wit: Contract and mortgage dated March 7th, 1884, for the sum of five hundred and twenty-seven dollars and cents, payable in labor and cash, on account of work, materials furnished, and expenses incurred by plaintiffs at defendants request and for their interest upon said company, as expected and agreed to be paid by said defendants, and for goods, wares and merchandise sold and delivered by said plaintiffs at defendants special request, and for their interest upon said company, as expected and agreed to be paid by said defendants, and for goods, wares and merchandise sold and delivered by said plaintiffs at defendants special request between the 20th day of July, 1884, and the 20th day of September, 1884, the aggregate amount of which is $1,852.09, upon which there has been credited the sum of $520 leaving a balance of $1,332.09, and interest on said sum. All of which more fully appears by the complaint on file herein to which reference is hereby made.

And you are hereby notified that if you and each and each of you fail to appear and answer the said complaint within the time aforesaid, the said plaintiff will take judgment against you for the said sum of $527.00, (five hundred and twenty-seven dollars and nine cents) and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California, this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty five.

W. L. ROCHESTER, Clerk.

(SEAL.)

Eddy & Conkin, Attorneys for Plaintiff.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, MARCH 14 ..... 1885.

George Washington.

Now that the workmen are clearing away the scaffolding from the tallest monument in the world, we are led to inquire, who was George Washington?

He was the father of his country for one thing. He gave this country a start that it has never fully recovered from. He was also first in peace, first in war and first in the hearts of his countrymen. He did not take the position on account of the salary. At that time the pay was not large, yet George attended to the work well. He would get up before daylight and work till late in the night. He very seldom took a holiday, and used to work right on through the 22nd of February as he did other days. George Washington was different from some of our modern statesmen in many respects. He scorned to enter a convention and grapple with the delegates all day. He did not seek to be president so hard as some have since done. He simply placed himself in the hands of his friends and let nature take her course.

The more I study the character of George Washington the more I regret his untimely death. We need him almost every day. If he could see how badly his orphan country needs him sometimes, it seems as though he would almost open the door of the Mount Vernon smoke-house and come forth.

A very curious incident occurred in the life of George Washington which now appears in print for the first time. It seem that George was given a small hatchet by his father when a boy, and in an unguarded moment the youth cut down a favorite cherry tree belonging to his father. On the return of the old gentleman he discovered the act, and calling his son to him, asked how it occurred. George did not know what to say, but finally he looked bravely up in his father's face and said: "Father, I cannot tell a lie. I did it with my little hatchet."

I have often wondered that an anecdote like this, concerning a great man, should have remained so long unknown. I am indebted for the above facts to friends of deceased.

The monument to George Washington is a deserved tribute to a great man. It is no slouch of a job to be president the first time and pay off the help that it takes to run such a government as this. Let those who think it is easy to be president try to write an annual message once and see how their brains will throb. A president must not only shine in society and be able to stand on one leg and shake hands with every ten cent official in the union, but he must be quiet and gentlemanly in his home life and a good provider in his household. Added to all this he must be able at a glance to distinguish between a flotilla and a reciprocity. He must know how to spell at sight and be able to sign his name so that it will look like a bird's eye view of a stroke of paralysis. He must be firm with foreign powers, and still he must govern his temper and avoid the unnecessary shedding of other people's blood. He should be a good business man, a good statesman, a gentleman and a scholar. We can readily see that a successful president cannot be picked up on every street. Of course, he has a good deal of help, but he alone is responsible. George Washington was all that was great, but the most successful thing that he did was to quit at the right time and to die before he slopped over. Late years great men commit an error, some of them at least. They make a bad break and then die, instead of dying first. Some of our eminent men have saved the American people the expense of a tall monument, I notice, by procrastinating in the matter of death. George Washington did not wait till "the nation" craved his death. He now has a monument that is tall and attractive. This is a powerful lesson to some of our public men not to overdo the matter of longevity. Long life is all right in other walks of life, but in politics it may be overdone.

George Washington attracted a great deal of notice, even in his time, by telling the truth. Think what a curiosity he would be now. And yet truth is within the reach of all. We may accustom ourselves to almost anything if we begin gradually and work our way up to it. George Washington to-day would no doubt be regarded as a freak of nature, and yet he told the truth without effort and without his notes. He used to entertain his friends through the long winter evenings by allowing them to tie his hands and feet and then blindfold him, and on top of all this he would tell the truth for hours at a time. He was what we call in science an anomaly. But he had to give up at last, and finally he yielded to the unequal strain and death ensued. People who contemplate a political career with more or less truth in it should see that they have strong constitutions to begin with.

Wedding Pledges in India.

Every twelve years in the Hindoo calendar occurs a year during which it is held that no marriage must take place, and accordingly within the last few months the matrimonial market has been unusually lively. This custom will greatly affect the government Registration Department which is sometimes used to register curious matrimonial provisions. Thus, in one village, a husband undertakes by deed never to beat or abuse his wife; another bridegroom registers his promises to live always with his father in-law or pay a large sum of money in default, and in another case a low-class Hindoo, who is the son of a second husband, binds himself not to occupy such seats at marriage ceremonies as are intended for those of his class who are sons by first husbands.

PRESIDENTS' ASHES.

"Their Graves Are Scattered Far and Wide."

It would be a good idea for the United States to have a National Mausoleum, like Westminster Abbey in which the Presidents could be buried, and statues of them erected, says "Carp."

Gen. Harrison's body rests in a brick vault on the top of a little hill fifteen miles west of Cincinnati. A big, flat stone lies on its top, but there is no inscription, and the only beauty about the grave is the pine trees which surround it with their perpetual green. John Tyler's body is buried in the Hollywood Cemetery at Richmond, Va., and it has not a stone nor bust to mark its resting place. Ten yards away is President Monroe's grave, but he was not buried here until the centennial anniversary of his birth. Monroe waited twenty seven years for an appropriate tomb, and he now rests in a vault over which is a large granite sarcophagus, and on it an inscription testifying that it was erected "as an evidence of the affection of Virginia for her good and honored son." Van Buren's grave is now bleak and bare, without a flower or shrub, at Kinderhook, and a year or two ago the little granite shaft which stood over the remains of Thomas Jefferson had been mutilated and its inscription destroyed by relic hunters. George Washington has been twice buried. Mt. Vernon is now his tombstone and the sarcophagus in which he lies is a brick vault overlooking the Potomac. It has but one word on it, "Washington." The two Adams are buried in the Unitarian Church at Quincy. When John Adams died, his son, then President, obtained a deed to a burial lot in the cellar of the church fourteen feet square, and in this he built a granite tomb for himself and his father. Here lie the two Presidents and their wives, and on the walls of the church above are long inscriptions commemorative of their lives and worth. President Taylor has never been buried. His body was brought immediately on his death at the capital, to his father's old farm in Kentucky and there put into a vault. It has lain there ever since, and there is a gray granite monument, surrounded by a marble statue of the General, near by. Frank Pierce has a monument of Italian marble at Concord, and strange to say, the name engraved upon it is Francis Pierce, instead of Franklin Pierce, as he was known to the country. It has no long inscription, and is like the monument of Millard Fillmore at Buffalo, simple to an extreme. James Buchanan lies in a vault in the Lancaster Cemetery and chronicles his life in the dates of his birth and death and the fact that he was the fifteenth President of the United States. It takes twenty-three lines to write the inscription on Polk's tombstone, and it lies in Nashville, twelve miles away from that of Andrew Jackson, a much greater man, who sums up his record in three. Jackson's body lies in his garden at the Hermitage beside his wife. The monument above them is of Tennessee limestone, and Jackson's life is given in these words: "Gen. Andrew Jackson, born March 15, 1767; died June 8, 1845."

Women at War.

If there is anything about which women are more reticent than another it is their ages after they have passed the sixteenth of life's mile stones. The other day on one of the Bloomington and Normal cars, a girl came in and sat down by a fashionably dressed young woman. She was plain, but saucy and interesting in appearance, and she had not been seated long before she turned to her companion and remarked:

"Excuse me, please; but have I not met you somewhere?"

The haughty young queen of fashion gave her a withering look and deigned no reply.

"I beg pardon, ma'am, but I hope I have not offended you," the pert miss continued.

"I should think you are old enough to know better," the fashionable lady tartly replied. "Your impertinence is inexcusable in one of your advanced years."

"Hoity toity!" exclaimed injured innocence, looking daggers at the well-dressed lady. "I hope you ain't mad!"

"I would have you know that I cannot be expected to be less than angry at such childlike simplicity in one so very old."

"Deary me!" sighed the poor, crushed young creature, as the other contemptuously turned up her nose. "Think I am quite aged, don't you?"

"Well, rather antiquated, I should say."

"Why, goodness me! I am pretty old, madam. I had almost forgotten my age, but your words recall my memory to some of the early incidents of my life quite vividly. I knew I had seen you somewhere, and I remember all about it now. Do you recollect your sister Jemima? Ah! it all comes back to me now as bright as day. Jemima was your younger sister and she served as a nurse for me when I was a baby. I knew I had seen you somewhere before," and then they glared at each other while the passengers applauded and the mules toiled before their great load of hatred.

Major Natt's Bride.

Eighteen years of age, of the ordinary size, weighing about 125 pounds, and with a blush upon her pretty face that more than made up for the absence of roses, Clara Coffield, of Boston, stood by his side waiting for the word that should make them one. The bride was one of the prettiest types of the brunette that one would meet in a day. Her fair, full cheeks were flushed with the pink of health, a row of the whitest possible teeth could be seen when a smile drew her rosy lips apart. She was dressed in a handsome garnet silk, and also wore a dark brown cape which outlined her form very prettily.

THE PEANUT TRADE.

How Peanuts are Raised and Distributed in the Country.

Within the last two years the raising and handling of the "guber," as the peanut is called in the south, has become an important industry. Yet the producing sections are confined to eastern Virginia and western Tennessee along the Cumberland river. The largest markets for peanuts in the world are Norfolk and Cincinnati. About two months ago the most extensive peanut commission house in Cincinnati removed to St. Louis, and will try to make that city an outlet for the Tennessee stock. Last year the total yield was comparatively light, being about 1,000,000 bushels, while this season the crop is over 3,500,000 bushels. Last year they sold at seven and one-half cents a pound, while this year they can be had at three and a half cents.

The peanut grows very much like a sweet potato, and the vine resembles the red clover. Wherever a new leaf starts out a tendril is formed which extends into the ground. The average yield is from thirty to seventy bushels to the acre, and there are about 100 peanuts on a vine. The article is a good one for speculation, and money can be made by judicious investments, because peanuts do not deteriorate with age and keep their taste for years. The expense of raising them is twice that of corn. The reason of this is that the fruit must be picked by hand, which is slow and laborious. The average annual consumption is over 2,000,000 bushels. Of course the consumption depends upon the price to a great extent. The experiment of cultivating peanuts in California was recently attempted with signal success, and the "Golden State" will probably become a rival of Virginia as a peanut producing locality. A few are raised in North Carolina, Missouri and Arkansas, but the two states referred to grow nine-tenths of all the peanuts used in the world.

A good deal of skill is required in handling gubers. They are shipped in the rough, and the process of cleaning and grading is done by the wholesale purchaser. The peanuts are emptied from sacks into a large bin and are run through a fan which separates the chag. Passing down through another fan, the light nuts are thrown aside and the meaty ones run along a groove, when the black and inferior stock is picked up by girls, and when the nuts reach the packing room there are two grades. During the various processes through which they are sent the nuts become clean and polished. Of course they must be roasted before people will eat them.

Working in the Dark.

"Ma and I," she said shyly, "are more like sisters than mother and daughter."

"Yes!" he said, with a lingering inflection on the afterguard of the yes, which rose clear to the ceiling.

"Yes, indeed," said the girl, the rosy flush on her cheeks making her infinitely more beautiful than ever. "Ma and I are inseparable. We have never been separated a single day since I was a little baby."

"N-no?" he said, this time with an inflection on the second section of on that went only half way to the ceiling and back again.

"Oh, dear no," the girl went on in her artless way, "and ma and I always said, that when I was married, she was going to love my husband like her own son and come and keep house for us."

"Oh-h?" William said, with a circumflex. Then he rose up slowly and firmly and said that he had a note in bank to take up at three o'clock, and as it was now half-past nine he would go. And he did go. And he didn't come back again. Not never. And ma said to the girl:

"That's where you missed it in not fully trusting your mother. Why didn't you tell me that man had been married before? Had I known he was a widower, I would have played the 'Home for old women' racket on him."

The great scientist Vulpin says that cholera is only paralysis of the liver. Paralysis it is; but—liver. Why, the man who has got cholera ain't a liver. Not much he ain't. Not after the cholera has got a grapevine twist on him.

LOVE'S INSPIRATION.

The Dream of a Newsboy's Life Promises to be Realized.

An illustration of how the course of human events can be changed by a simple action came to notice in a Western city a few days since. The principal actor in the tale of romance and heroism was a poor newsboy and the scene was in Denver. The brave lad's name is withheld from the public for various reasons. He has been known heretofore among his companions simply as "Ted." He went to Denver from a small town in Iowa about a year ago. He had been left an orphan by the death of his parents in the latter place, and with the characteristic American idea of going West he had boarded a freight train, and by the good nature of some of the conductors and brakemen, and by hiding from the argus eyes of others he had at length reached gaol of his ambition and landed in Denver. Beautiful it seemed to him on his arrival, with its long rows of handsome dwellings and stately stores, whose well-stocked windows filled to the utmost his ideas of the promised land.

Ted was a bright little fellow, who, in spite of the neglect and the bad company into which he had been thrown, preserved a certain measure of self-respect and pride. He was withal ambitious, and it was the one dream of his life to make money enough to educate himself and be able to read the papers he sold, and master the mysteries of books, especially those of travel. He was also an admirer of the beautiful and had a vein of sentiment in his composition which would hardly have been expected. One of his chief recreations, when all his papers were sold, was to go to a pretty cottage on Champs street and, looking sometimes for hours through the pretty grounds surrounding the house, yet it was not wholly the garden and flowers which attracted him, but something far prettier, for which he waited sometimes until dusk had come, this was a little fairy not as old as he, who, with her flaxen curls, rosy face and roguish blue eyes had, all unknown to herself, captivated him and made of herself the shrine at which he daily worshiped. Sometimes when the weather was bad for days at a time he did not get a glimpse of her, and these were dark days indeed for him, and a light seemed to have gone out of his life. She was present with him in his thoughts night and day, and although she did not know and had even ever spoken to the ragged little newsboy she was his guardian angel, and the thoughts of her kept him from doing many things that the other boys did that he conceived she would not approve of if she knew of them. The dream, for it was but little more, so far as its reality to him was concerned, grew day by day, until it became a part and parcel of his life.

One day Ted, who sometimes did littles chores around the office, was sent by the foreman with a package to house on Broadway. Taking his papers with him, thinking he would do a little business on his way back, he ran up the street, and had soon performed his errand. Just as he was coming down the steps his attentention was attracted by a horse attached to a buggy galloping furiously toward him. At a glance he saw it was a runaway, in a moment, he saw a sight which nearly froze him with horror. Sitting on the seat with face blanched with terror was a little girl with long curls fluttering in the wind behind her and holding on to the rail with a death-like clasp. In an instant he recognized the angel of his dreams, the perpetual companion of his thoughts, and without any idea of consequences, he ran into the street, sprang at and caught the bridle of the frightened horse, and although dragged for nearly a block through the dust and mire he held on valiantly, checking materially the horse's speed, until a passer by ran to his assistance and relieved him from his perilous position. He presented a pitiable appearance, being covered with dust and blood from some serious wounds in the head. He was picked up and carried to the sidewalk, where he fainted from loss of blood. The little lady for whom he risked his life was safe and sound, having sustained no injury other than from fright. It seemed that her father had gotten out of the buggy to fix a buckle in the harness, leaving his daughter on the seat, when the horse took fright at a barking dog and dashed down the street at a terrific rate before he could be secured.

Not many moments elapsed after the horse was stopped before the frightened father came running up, expecting that his little daughter had been thrown out and killed. Finding, however, that she had not been harmed, he turned his attention to her preserver, who lay bleeding on the sidewalk, with his poor garments in tatters and a terrible wound in the head caused by striking a stone while being dragged. Mr. Carleton, the gentleman, summoned a hack passing by, and, sending his own horse home, lifted the lifeless form of the boy, tenderly placed it on one of the seats of the carriage, and with his daughter took the other. The little maiden full of pity for him, with tears in her eyes tied her handkerchief, bearing her name, around his poor head to try and staunch the flow of blood. The driver was directed to the hospital, where medical attendance was at once obtained, and everything done that could be for the wounded boy.

Mr. Carleton called frequently at the hospital to ascertain the condition of the brave lad. The boy lay in a stupor for some time. This was followed by a high fever. Early the next morning he was wide awake and in a flutter of expectation, watching the door every time it opened, with his big, brown eyes, for the visit of his little sweetheart. He had not long to wait, however, as soon the door opened and a fine-looking gentleman, leading by the hand a little girl, entered and advanced at once to his bedside. Taking his hand he called his daughter, who talked earnestly with the boy who saved her life.

At the end of a week Ted's condition had so much improved that Mr. Carleton thought he could be removed and resolved to take him to his home. A carriage was brought and Ted, in a delirium of happiness, soon found himself in the beautiful home of his protector. Ted in the meantime had told his story, and Mr. Carleton had resolved that his ambition for an education should be gratified, and as soon as he had sufficiently recovered he was placed at school, where he made rapid progress. He is still living at the happy home on Champs street and is one of the most promising pupils of the High School, and gives evidence of becoming a useful man.

Uncle Esek's Wisdom.

It is not power, but the balance of power, that wins.

The best man living cannot give an undoubted bond for his good behavior thirty days from date.

Civility is the lowest price we pay for things, and repentance the highest.

All knowledge begins in doubt, and much of it ends there.

If mankind had capacity equal to its malice, we should have no use for the devil.

My friend if you want to make people think as you do, let them have their own way; nothing else will tire them out so soon.

The line between folly and wisdom is so uncertain and indistinct that the philosopher and the fool are often seen prospecting on each other's claims.

Hypocrisy and cunning travel together, and they can't get very far separately.

The hardest man to shake from the ladder is the one who mounts a rung at a time.

Men often climb half way up the ladder and stay there; but it is seldom they fall half way down and stop short of the bottom.

Nature can make absolute laws, but she can't break the least of them.

Familiarity is not friendship; puppies end all their frolics in a quarrel.

The fox carries the bad news, while the turtle crawls with the good.

Fame follows us to the grave, scratches a hasty epitaph on our tombstone, and then hurries away for the next man.

There is no satire in truth, and yet a man can't tell the whole truth without being highly satirical.

There are lots of people who never know anything until they run against it, and then they know too much.

Fools will bite on anything, like a frog in a puddle. You can catch them and throw them back again as often as you please.

Aim high, young man; then attraction of gravitation, if nothing else may get your ball into the bulls-eye.

Every one expects to be remembered after they are dead, and yet not one in a million can give any good reason why.

The poetry of youth is generally the avarice of old age.

"Nature abhors a vacum;" therefore she fills some heads with sawdust.

The man who never takes a chance is beaten just as often as anyone else.

Very precise people have but few brains. That is what makes them so precise.

Revenge makes a hornet respectable, but it is dastardly in a man.

You can't be familiar without losing a certain amount of respect for yourself, and for the other man too.

The great misfortune with most of us is, we are constantly looking ahead for our experience, instead of looking behind.

No man can expect to live with the virtuous and mingle with the vicious and keep pure.

Sayings by Flow.

It is a wide road that is not full of ruts.

It makes the devil laugh to see some men join the church.

For heaven's sake give women a vote; it may stop their love for gossip.

Men who believe their fellow creatures to be pigmies are generally hogs themselves.

Don't go into partnership with a man who swears that the world does not treat him right.

"All things are possible with God." This is illustrated by the fact that even members of congress are Christians.

Extravagance: Stuffing your marketable turkeys with lead at twelve cents a pound when old iron at one and a half cents a pound would answer just as well.

NINE SCORE YEARS OLD.

A Woman of More Years than the Patriarch Isaac.

The particular tribe of Moquis in which I discovered the most remarkable cases of long life are called the Wakoyas, and comprise about 150 people, males and females. Of these there are only about seventy children, about sixty middle-aged persons, and the rest include at least fifteen centenarians. They do not intermingle with the roving bands of savages, preferring a fixed habitation in their little village in the valley of the Chausaka River, one of the hundreds of small streams tributary to the Colorado. They dwell in stone houses or huts, engage in agricultural pursuits to a limited extent and enjoy many of the arts of civilization. The chief proved to be of an obliging disposition and showed us all about the village. We were followed by a crowd of young Wakoyas and a number of dogs, with which the village abounded. After proceeding a short distance we paused before the door of a low stone hut, covered with a skin roof, the cracks in the wall being filled up with brown adobe. Our leader entered without going through the ceremony of knocking. "Muskee! Muskee!" we heard him shout repeatedly from within. But Muskee was evidently not at home, and the chief came back with a disappointed look on his dark face. We met the object of our search about twenty yards from his door and were presented to him in the Indian fashion.

He appeared to marvel at our unexpected appearance, but his astonishment was nothing as compared to ours as we gazed at his strange and unnatural form. His shoulders and limbs were clothed with deerskin robes, and his face, which seemed to be barren of flesh, was covered with dry, wrinkled skin; his fingers were extremely long, and his palms and wrists were withered and shrunken, while his whole body, which was much attenuated, was bent over until his back assumed the shape of a half-circle. I had never seen such a specimen of aged humanity before. Our Moqui guide, who spoke English almost perfectly and whose veracity we had tested on previous occasions, told us, after making the necessary inquiry, that the man was 175 years old, and I have not the slightest doubt, nor would anyone have after seeing the ancient Wakoya, that such was indeed his age. After looking at us for some few minutes, during which he rested his chin heavily upon the long staff which he clutched with one of his dried-up hands, he mumbled a few words in answer to questions put by the chief and our interpreter, and then, raising his head and stretching out his limbs, he shambled off toward his hut at a tolerably smart pace for a man 175 years old.

But the greatest surprise was yet to come. We were ushered into a rudely constructed stone building of greater dimensions than those before visited in the village. When our eyes became accustomed to the dim light we saw a skin-clad figure kneeling in one corner of the room and engaged in breaking light sticks of wood into small fagots. We were told it was a woman whom the chief had brought us to see and that she had not noticed our approach, being blind and deaf. The chief placed his hand upon her shoulder and she slowly turned around. I could now see quite plainly and was at once struck with a feeling of repulsiveness almost akin to the horror one feels toward visions seen in a nightmare, when her hideous face and blank, sunken eyes met my gaze. Her face was of a greenish-yellow color and whatever was left of flesh or skin clung to her bones as though stuck there by some adhesive compound. It bore a parched, desicated appearance, like the outer flesh of a mummy. The lower jaw, which was devoid of teeth, obtruded considerably beyond the angle of her sharp, hooked nose. Her arms appeared to be almost bare of any fleshy tissue and the skin covering them was dry and hard. She is 182 years old. This places her two years beyond the reputed age of the patriarch Isaac at the time of his death and she must have first seen the light in 1702 or seventy-four years before the signing of the Declaration of Independence.

The immemorial fashion of this tribe of keeping record of ages is by punching small, round holes in a piece of smoothly polished horn at the end of each twelve-month. I expressed a desire to see the record of Watsuma's age. At first she was very backward about producing it, but finally directed her young attendant in a slow, hoarse speech to bring it to her, which was done, and then, without allowing us to take it from her bony fingers, she held it up for inspection. The 182 holes were counted by our wondering party and the ancient relic was replaced in its position in an inner recess in the walls of the hovel.

The creole beauties of New Orleans are not on exhibition for the benefit of curious strangers. They are to be seen of a Sunday morning at the cathedral, or at the French opera upon some special occasion. Their complexions are olive; their hair black and lustrous; their hands and feet small; their figures slender and graceful; their carriage stately and dignified; their taste in dress exquisite. These types are by no means rare, but as a class it may be doubted whether the creole women can be really pronounced handsome.

As Merry as Sleigh-Bells.

"Do you get many orders nowadays at your place?" "Yes," replied the youngest clerk, "that's all I do get."

"When Mr. Irving and Miss Terry return," said Mrs. Spriggins, "I'm going to take in the whole of their repartee."

"See how plain a tail shall put you down," remarked the alligator as he swept the little darkey within easy lunching distance.

"When you go to bed you should always hang up your watch. It is better for it," remarked Wilson to his son recently. The next night he asked the young man what time it was. "I don't know," replied the youth. "Where is your watch?" "I hung it up, sir."

"No, I don't allow card playing in my house," said Popinjay, "but in spite of me the girls will have a little game of seven-up about every night." "How is that?" inquired Blobson, in a puzzled tone. "Why," rejoined Popinjay, "there are four of them and they generally have three fellows up with them until half-past eleven o'clock."

"Mamma, tell me a story to-night, won't you?" coaxed a Chicago maiden of six Christmases. Mamma finally consented, and, pursing up her lips and looking solemn in the usual style, began: "Once upon a time there was a ——" "Stop right there, mamma," said six-year-old; "I don't want to hear that story. I know it's a chestnut by the way you begin."

"Where did you get this French Bible?" asked Smith, taking up a book from Black's table. Black—"French Bible! I haven't got any French Bible. The only Bible I have is the one you have in your hand. Had it ever since I was married." Smith (holding up the book)—"What do you call that but French?" Black—"By gracious! so it is! Funny I never found that out before?"

"Now, sir," said the prosecuting attorney, pompously, "you are a railroad man, you say. Now, sir, let's see how much you know about your business, sir. What motive, sir, has your company for running its trains through the city faster than the ordinances decree?" "What motive?" "Yes, sir; what motive? Come, sir!" "Why, locomotive, I should say." The witness was fined for contempt of court.

Still a Mystery.

"What," said the Shah of Persia, one day, "means all this turmoil I hear in the streets?" "Most High and Mighty Son of the Sunrise," replied his grand vizier, "it is the populace following one who calleth himself Buddha, and who gets about performing miracles."

"Let him be brought in."

The guards brought in on the run an old man of majestic appearance to whom the Shah said briefly:

"Let the hippodrome proceed."

Thereupon the alleged Buddha began his circus. He swallowed three cannon-balls without winking; he climbed an invisible pole; he rubbed the rheumatism out of a scullery maid's shoulder; he removed a royal wart from the Grand Vizer's nose; he rolled lampfighters, lit them, and they became writhing snakes; and took a 6-year-old girl out of his pocket handkerchief. These did he all most excellently. Yet did not the great ruler bat his eyes.

"Art Buddha?" he said tersely.

(The Shah was very brief-winded.)

"Yea, verily."

"Then take thee this lead pencil, friend, and drop the same upon the floor. If the end break not, then verily thou art Buddha."

But the alleged immortal, shrieking wildly, "That I have tried these many years in vain," fled forth, flung himself from the battlements, caught upon his cheek and escaped back into the far recesses of the Himalayas. But the great monarch smiled feebly and said:

"Thus have I unmasked already nineteen Buddhas.

The Boy that Watched the Pot.

In a certain village in Maryland a small boy kicked up a breeze in the parish church last Sunday. It seems that a certain good woman bought a calf's head and put it on to boil, leaving her little boy to mind it while she went to the church close by.

The minister had reached his fifthly, my brethren, when a small boy stuck his head in the door and whispered:

"Mamma?"

The good woman recognised her son instantly, and began to make signs for him to leave the door.

"Mamma!" again came the whisper, this time a little louder than before.

The mother shook her finger at the boy warningly, and indulged in familiar pantomime with which she was accustomed to awe her son. But it didn't work worth a cent. The boy was excited and in dead earnest, as the denouement will show. Raising his voice he shouted:

"Mamma, you needn't wink and blink at me, but had better come right away, for the calf's head is buttin' all the dumplins out of the pot."

Three Massachusetts policemen, after fifteen years' service on the force have been discharged, and immediately applied for places in the almshouse. We presume it is difficult for a man to work after fifteen years of luxurious idleness.

TRAVELING.

Railroad Time Table.

CARSON & COLORADO R.R.

....TAKING EFFECT....

Thursday, Dec. 4, 1884.

STATIONS.	From Mound House No. 1. Leave—	To Mound House No. 2. Arrives—
Mound House	9:15a. m.	6:00 p. m.
Dayton	9:45 a. m.	5:25 p. m.

SATURDAY, MARCH 21, ...1885

C. Mulholland,
EDITOR & PROPRIETOR.

HAD all the silver produced by the mines of the United States been coined into standard dollars for the last fiscal year, it would not have added more to the specie circulation of our people than seventy cents per head of our whole population.

THE United States makes one-fifth of the iron and one-fourth of the steel in the world. Of the gold supply this country furnishes one-half and of the silver, one-third. The United States represents 36, Great Britain 33, and all other nations, 31 per cent. of the mineral industries of the world.

An American Aristocrat.

"There is a mistaken notion among philantropic people in the east that the Indian is a much abused person, who is entitled to the lively sympathy of mankind. Unquestionably there have been plenty of instances of broken treaties and individual and tribal wrongs; but, looking at the matter, not from the historical, but from actual point of view, it must be admitted that the aborigine on a reservation has more rights and privileges than a white man enjoys. 'If I could have the privileges on this reservation which the Indian has,' said Major Ronan, the Indian agent, as we were driving through the lovely Mission valley, 'I would resign my office at once, settle down on one of these streams, build a house, fence in all the land I wanted, and get me a big herd of cattle.' The Indian or the half breed, explained the agent, can inclose as much more as he wants for a stock range. He pays no taxes, and ride free on the railroad. If his tools get out of repair, or his horses need shoeing, the government employs a blacksmith to work for him. He takes his wheat to the agency flour-mill, where it is ground by the government, and his logs to the agency saw-mill, to be made into lumber of the dimensions he wishes. If he is sick, the government supplies him with medicines and a doctor. The missionaries educate his children in a boarding school, and furnish him with the comforts of religion without charge. If too idle to work, he knows that the government will in no event let him starve. If he tries, he can become a rich man by the mere increase of his cattle and horses. Now, how does it stand with the white citizen? Instead of thousands of acres, he can get from the government only one hundred and sixty, and on them he must pay taxes and 'rustle for a living,' as the western phrase goes. The Indian is our American aristocrat. He owns the whole landscape; he toils not, save, in a timid way as it suits his pleasure, and he spends his time in hunting, fishing, horse-racing, gambling, and loafing. It will be argued, I know, that the Indians once owned the whole country, and that their reservations and the privileges they have upon them are after all but a small compensation for what they have lost. This, again, is a mistake. No people own a country because they roam over it before others come to share its occupancy. If a few hundred white men should chance to be the first inhabitants of a territory large enough for a great state, who would say that they owned all the land by reason of that circumstance?"

The Anomalies of "Society."

Julian Hawthorne recently lectured before a historical society, and closed his address with the question, "What must a man do or be in order to belong to good society?" Mr. Hawthorne would have increased the gratitude of his hearers had he answered the question that he asked. He propounded the riddle that is the sphinx of modern society, and left it very much as Mr. Howells now and then raises a question of social philosophy, and accommodatingly leaves it for his readers to decide as they please. A well-known society leader in New York took up Mr. Hawthorne's question, and replies that being fit for society is not a question of manners, for everybody has seen excessively ill-bred people quite at the center of society. In fact, to-day in New York, a considerable number of the young married women who are coming to the front as society leaders seem to have an idea that downright rudeness is rather chic, and that ill breeding and disregard of other people's feelings is a mark of social superiority and indicative of an independence only attainable by people who are at the head of affairs. It is not money either that gives social position, here or in England. A fair amount of it is, of course, valuable, but the recognized social leaders on both sides of the water are comparatively not very rich people. No more does personal distinction necessarily confer the social entree. Perhaps a very prominent man or beautiful woman becomes the lion or lioness of a season and fancies himself or herself as fully admitted, but as soon as people have satisfied their curiosity that bubble bursts, and the places that knew them know them no more. Birth has a good deal to do with original admission. Tact also is of great value; combined with push and audacity, it can do wonders; but it is impossible to formulate the absolute pre-requisites for social position or to explain the curious anomalies visible all the time in the structure of what we call "society."

When a house is to be let in Mexico the owner sticks an old newspaper in the window.

Death, the great overtaker, prepares the way for the undertaker.

George D. Prentice.

There is a sort of general idea that Prentice was "a bad man with a gun," a duelist, and all that sort of thing. Nothing could be more erroneous. The fact is he never fought a duel, but was sometimes, from the nature of his business, forced to personal and sudden rencounters. He was frequently challenged, but always made fun of messages. Once he wrote his challenger that it only took one fool to send a challenge, but it took two to fight, and he didn't wish to be classed in that category. On another occasion he accepted the challenge, and having the choice of weapons, insisted that each man should be armed with a straw and a cask of whisky, and that each should suck with his straw from his own cask until one fell, and that one should be considered vanquished and the other's honor satisfied.

Prentice was an exceedingly candid man, as the following anecdotes will show: Once Will S. Hays, the famous song-writer, in conversation with him said: "I suppose, Mr. Prentice, you have seen my last song?" With a sly and quizzical look at the minstrel, he replied: "Well, I hope so, Bill."

Coming out of a public building one day, where there were double doors which swung in and out, a young man who was coming in, pushed against the left-hand side of the door in order to enter, while Mr. Prentice was pushing against the other side of the door trying to make his exit. The result was a ridiculously awkward halt. Finally, when the two had managed to get the door open, Mr. Prentice said to the stranger: "My young friend, in making your way through the world, if you will only keep to the right you will never run against anybody but a fool, and you needn't apologize to him."

Somebody stole the unabridged dictionary once from the editorial-room of the Journal, and Mr. Prentice, having occasion to use that valuable tome, discovered the loss. Forthwith he ordered that another copy of the book be purchased at once. "For," said he, "no one but a shameless egotist would attempt to edit a newspaper without a dictionary."

Mr. Prentices's hat was one of his eccentricities. He always had it more than half full of bits of paper not larger than a postal stamp, on each of which he had written a word or two, in the way of a memorandum. Besides, he carried his pocket-knife, pencils, scissors, spectacles, and portmonnaie in it, and sometimes, in an absent-minded way, he would put a well-masticated chew of tobacco into it instead of throwing the cud away.

Many persons from abroad used to call on Mr. Prentice when they were in Louisville, as though he was one of the curiosities of the city, or just for the purpose of being able to say that they had talked with such a great man, and this was peculiarly annoying to him, as he was inclined to be retiring and really never thought of comprehending his own fame. On one occasion an old friend called on the editor, and brought with him a callow young man from some undefined locality in the rural districts. This youth was particularly curious, and actually asked Mr. Prentice to say something funny. The ludicrous remark was smoothed over as quickly as possible by the gentleman who brought the young man in, and shortly thereafter some liquid refreshments were ordered to be brought up to the sanctum. Mr. Prentice had chosen a mint-julep, and when it came he held it up and asked the gentleman why that drink was like his young friend? Of course the young man, feeling flattered by the attention, was eager to know, and begged for the answer to the conundrum. Finally, turning to the gentleman, Mr. Prentice said with a pleasant smile, "This is a green-born!"

Once Mr. Prentice met an acquaintance on the street who was very much intoxicated, and he declared to the wit that he was all hunkidori." "What do you mean by hunkidori?" said Mr. Prentice. "I mean, sir," said the inebriate, "that I am pretty drunk." "Well," said Mr. Pentice, "if hunkidori means pretty drunk, I think you are hunkidori." In 1868 Hon. Henry Watterson became editor and part owner of the Journal, and Mr. Prentice, who had grown quite feeble, did very little work. In the course of six months the Journal was consolidated with the Courier and became what is now known as the widely-circulated and influential Courier-Journal. About a year after Mr. Prentice died at the residence of his son, Colonel Clarence Prentice, a few miles below Louisville, on the Ohio river.

He was a powerful editor, and was the most brilliant paragrapher of the age—indeed, the first one of any note. His wit was bright and sparkling, his satire keen, his eloquence grand, his poetry beautiful, his logic unanswerable. A deep thinker, a profound reasoner, genial, hopeful, human, and therefore, sometimes erring, he had the best of friends, the bitterest enemies, and he was all in all, a great and gifted man—a genius.

Mrs. Partington and the Atlantic.

I do not mean to be disrespectful, but the attempt of the lords to stop the progress of reform reminds me very forcibly of the great storm of Sidmouth, and of the conduct of the excellent Mrs. Partington on that occasion. In the winter of 1824 there set in a great flood upon that town; the tide rose to an incredible height, the waves rushed in upon the houses, and everything was threatened with destruction. In the midst of this sublime storm, Dame Partington, who lived upon the beach, was seen standing at the door of her house with mop and pattens, trundling her mop and squeezing out the sea water, and vigorously pushing away the Atlantic ocean. The Atlantic was roused; Mrs. Partington's spirit was up. But I need not tell you that the contest was unequal. The Atlantic ocean beat Mrs. Partington. She was excellent at a slop or a puddle, but she should not have meddled with a tempest.

TALL TALES.

Tough Truths Gathered from Various Newspapers.

A dog's skull in which were two $20 gold pieces and some small pieces of silver was found by Willie McKnight near the Rockdale paper mills on last Sunday evening. He was out walking and in crossing a gully found the skull.

William Peachy found a fox in a sorry predicament the other day. The animal was frozen stiff, with its head fast in a hollow tree. It is supposed that the fox had been chasing a rabbit and the latter took refuge in the tree; that the fox in his greed for gore had thrust its head in the aperture so far as to be unable to extricate it.

The other evening one of our sportsmen came home with a string of snipe. Pussy followed and watched the snipe hung up by the kitchen door. She then climbed up and tried to break the string, but it was too stout. Disappearing for a short while she returned in company with a large Thomas, and their united work brought the string to the ground. They were then divided, each cat taking three and leaving one extra, which both were determined to have. Finally it resolved into a pitched battle, and the Thomas cat was knocked out in the first round. Tabby departed with the four birds, landing them in good order at her owner's door, fully a block away from the scene of the raid.

Some men hunting on Black river, in the Great Swamp near the South Carolina line, killed a black tiger six feet long. The animal died hard, after killing two dogs, and one of the hunter's had a narrow escape. Another tiger of the same species of equal size has been killed in Sampson County. It had killed a cow, several sheep and a colt. It is believed that these tigers are those which escaped from Robinson's circus near Portsmouth, Va., last summer.

Cold in Michigan! Well, some, but cold weather is good for lots of purposes. The curiousest thing cold weather's good for is stocking fish-ponds."

"Stocking fish-ponds?"

"Thet's so. Down to Sag'naw bay the fishermen catch pickerel and sturgeon. Quick as they pulls em' out they hangs 'em up to freeze. In about an hour's exposure to the atmosphere them fish is froze as hard as china. Sometimes they get too brittle and break all in pieces. They carries these fishes off to their inland homes, an' when spring comes they thaw 'em out gradual. When they bein to show signs of life—"

"Signs of life!"

"Yes, two hours of luke warm water'll make 'em lively as crickets—then they restores them to their native element and all goes lovely. May I never take a chaw of whisky if I ain't seed it done scores o' times."

A dead silence settled over the crowd like the hush of a tired buzz-saw.

In a Pickle.

The business has been overdone. The proprietors of the pickling houses complain that the trade in pickles never was so dull. They have not been able to dispose of many more than went into stock from last year's pickling, and they have such an abundance on hand that they have given the the growers notice that it would be wise to plant some other crops. A pickling house at Greenlawn, L. I., which stores twelve million pickles has ten millions on hand, and all the other houses, some of them larger than the one at Greenlawn, are in the same position. Hardly any pickling house will want more than two million or three million next season and consequently the farmers will not be able to find sale for more than a sixth of the usual crop.

What Makes Complexion.

A pigment under the epiderm makes the complexion. The colored person has a black pigment, the brunette a light brown pigment, and the blonde a still lighter pigment. When there is no pigment in the skin an albino is the result, with pink eyes, white hair and white skin. When there is an excess of pigment freckles, moles and birth marks appear. Freckles are not alone due to the action of the sun. Some people have them in abundance on parts of the body not exposed to the sun. The hairs are hollow tubes, and have a supply of pigment sent into them which determines the color of the hair. The pigment comes from the blood. White hair may be from absence of pigment or from the presence of air in the tubes.

A Paper with a Bilious Tinge.

The West Grove, Pa., Independent announces that its first number in 1885 will be printed on green paper. It states that its object is two-fold. one to make it an oddity to mark the birth of 1885; the other for the advancement of science, in so far as to ascertain whether the assertion of that scientist who declared that everything should be printed on green paper is as represented. He asserts that type is easier read and the effect on the eyes less injurious. In order to discover the amount of truth contained therein we will call upon our readers to inform us what difference is perceived, if any, and its nature. By doing so they will confer a favor on the publisher, and at the same time contribute their mite toward the world's advancement.

At a musical soiree a lady, after executing an interminable piano solo, faints dead away. A gentleman, with great promptitude, seizes a glass of water and administers a few drops to the lady, who revives. Then, with a compassionate cry, "Now for the other sufferer!", he pours the remainder of the water into the piano.

A medical writer says anything that makes a person sneeze will cure the hiccoughs. Snuff said.

Mother as a Barber.

When a fond mother has to cut her boy's hair she draws the front hair over his eyes and leaves it there while she cuts that which is at the back. The hair which lies over his eyes appears to be surcharged with electric needles, and that which is silently dropping down under his collar band appears ta be on fire. She has unconsciously pushed his head forward until his nose presses his breast. In the meantime he is seized with an irresistible desire to blow his nose, but he recollects that his handkerchief is in the other room. Then a fly lights on his nose, und does it so unexpectedly that he involuntarily dodges, and catches the point of the shears in his left ear. At this he commences to cry and wish he was a man. But his mother doesn't notice him. When she is through she holds his jacket collar back from his neck, and with her mouth, blows the short bits of hair from the top of his head down his back. Then he goes out and wriggles to get the hairs out of his neck, and wonders what the other boys will say to him.

Some interesting experiments have lately been made showing the mobility of gold and silver in molten lead. It appears that, if a lump of a gold-lead alloy with thirty per cent of gold, covered with lead, is heated in a crucible, the gold is seen at the surface the very moment when perfect fusion has been attained; the diffusion also takes place rapidly if the gold alloy is put into a small crucible, and this one placed within another crucible containing lead. By melting in a cylinder, two hundred millimeters high, a solid cylinder of lead with a small piece of the gold alloy fused to its bottom—or, better still, by placing the gold at the top of one limb of a U-shaped crucible, withdrawing test portions from the top end of the other limb—the diffusion rate is arrived at, viz., three hundred millimetres in five minutes for silver, or a little higher probably than that of gold.

It is as easy to get rich at a raffle as it is at the oil exchange. All a man has to do is to stick to it. He is bound to beat the game, if the game don't beat him. A Utica man raffled away $1 75 and finally won a very small turkey. Elated with his luck he spent $1 in treating the crowd. Then somebody stole the turkey.

A literary swell—An editor with the dropsy.

The silk hat is only fifty years old.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, MARCH 21.....1885.

—The school at Lone Pine was closed for the term yesterday.

—Whole families go fishing in Owens river for catfish. They camp along the stream and the children have a good time in the sand and bright warm sunshine. This makes dull times for doctors; no need for medicines when the little ones have such exercise.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

FERTILE LAND.—From scant twenty five acres of land at Fish Springs, Mr. J. Smith cut and sold two hundred tons of alfalfa hay last season. Mr. Smith has five hundred and forty acres of land in his farm, and it is very uniform in character of soil.

STOCK FOR SALE.—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 100 pounds. For particulars apply to A. K. BRIGGS,
Independence Inyo Co. Cal.

SPILLED.—Last Tuesday a car laden with ore from Cerro Gordo got loose on the track at Belleville and went flying down the grade. The car jumped the track after running about two miles and the ore was scattered. No damage was done beyond spilling the ore, and that can be gathered up again.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.
Apply to
HARRIS & RHINE.
Independence.

The Weather.

Lieut. Charles W. McKim, Portland, Ky., states; "For twenty years I suffered with rheumatism. During the bad weather my suffering was terrible. I was about to give up. Some one suggested the application of St. Jacobs Oil. I tried it and its relief was rapid. In half an hour I could stand up. I no longer suffered with the pains."

THE BLANEY.—As per advertisement, Mr. Henry Levy gives out his card as "mine host" of the well known Blaney House. Mr. Levy's arrangements includes supplying the tables with all the good things attainable in this region, while the house has been thoroughly outfitted and newly furnished as to accommodations for lodgers and guests generally.

—The eclipse of the sun was seen under most favorable circumstances in Owens Valley. At greatest obscuration the sun, looked at through a smoked glass, was like the moon about four days after change; the air got quite cool and the birds twittered as they do about daybreak, and the landscape had a strange though beautiful appearance, as if seen through light purple glass.

COMPLIMENTARY PARTY.—Last evening the people of Lone Pine gave a complimentary party to Miss Eva Shepherd and Mr. C. H. Groves; the occasion being the close of the school term and the party an expression of the high appreciation in which the services of the teachers are held. The party was given at the Whitney House and was attended by many beside the people of the town.

NEW SCHOOL.—The people of Fish Lake Valley, long without any school privilege, have at last become able to afford a school house and a new building is about to be erected. In a new settlement, where there are but few people the money for a new school house can be very ill spared sometimes, but the American citizen is ever ready to make sacrifices to secure education for his children.

DITCH EXTENSION.—A company has been incorporated for the enlargement and extension of the ditch at Bishop Station, on the east side of the river. There is a very fine body of land there, extending along the river for several miles, that the water from this ditch will irrigate. The soil is very fertile, and as already proven by experiment, will produce large crops of grain, vegetables and fruits.

USE AND BEAUTY.—In a sage brush country, nothing makes a more agreeable change than tree planting. Certainly no other planting pays so well in the end. Mr. J. D. Shaw has already planted a good many trees at the station at Alvord, and will plant more. He has laid an iron pipe from the Gregg ditch to the station ground for irrigation water, and will soon have the now desert spot blooming in beauty.

DELICIOUS WINE.—A gentleman who made a visit to Owens valley recently, among others, made a call upon Mr. Rafael Diaz, near Lone Pine. Mr. Diaz treated his visitors with some wine of his own manufacture, and the visitor said, that never had he seen any wine that would at all compare with this. When the wine was poured into a glass, the whole room was filled with a delicious fragrance: the wine was as soft and agreeable to the taste as new milk, and had not a trace of the astringent or nauseous taste so disagreeable to those not accustomed to drink wine. The visitor has yet a little wine left of a lot he bought in San Francisco at a high price, thirteen years ago, but he says the wine of Mr. Diaz is far superior in every way. This gentleman is enthusiastic about the wine of Owens valley, and thinks it cannot be equaled elsewhere in the world.

BISHOP CREEK VICTORIOUS.

The Former Victors Beaten On Their Own Ground.

When the Haymakers of Big Pine defeated the Jutebacks of Bishop Creek, in the game played at the latter place on Washington's birth day, the Jute backs were not discouraged, but at once challenged their opponents to try conclusions over again. The challenge was accepted as promptly as offered, and the Bishop Creek boys offered to meet the Big Pine boys on the grounds of the latter, in order to gain a complete recovery of their fame, if victory should decide in their favor. The second contest came off last Tuesday, on the ball ground at Big Pine, and a large gathering of people from all over the valley showed what interest was felt in the result. The name, position, and number of tallies made by each player were recorded by the scorers as follows;

JUTEBACKS.		HAYMAKERS.	
E. Schober RF	5	J. Schalten RF	3
M. L Cook SB	5	C. Fuller LF	4
R. L. Peeler FB	6	C. McMurry CF	6
J. Stoutenbrh CF	4	H. Steward P	2
J. Summers TB	3	R. P. Hessian C	3
V. Smith SS	5	L. L. Burt SB	3
J. Kewley P	3	W. McMurry TB	4
Joe McNally LF	3	H. Hamilton FB	7
J. Hutchings C	5	W. Schalten, SS	5
Total	39	Total	37

Warned by former defeat the Jutebacks played quietly and earnestly and were rewarded with victory. Elated with former success the Haymakers were a little over confident, indulged in some display and lost their laurels. The soul of good fellowship characterized both clubs and when cheers were called for the victors the voices of the Haymakers rang loudest and heartiest. Again it was regretted that the Jutebacks were not uniformed. The pretty, bright uniforms of the Haymakers added much to the attractiveness of the scene at the ball ground, and at the dance in the evening these looked so gay that one who had not been better informed would have taken them for the victors instead of the Jutebacks in "sad coloured doublets."

THE BALL.

In the evening so large a company gathered for the ball that there was quite a jam; yet the arrangements made by the Hartshorne brothers were so complete that all were comfortably provided for. After supper, which was served about midnight, and was a feast fit for Homer's heroes, dancing was resumed and continued until long after the astonished sun returned over the Inyo Mountains to look down upon the jovial company he had last glanced on from the snow crowned summits of the Sierra. The long continuance of the dance was probably due to the sole stirring music of Messrs. McAfee and Tryon.

A PURSE.

The citizens of Independence purpose getting up a purse and invite both clubs to come here and play another game to decide who shall be champion. Independence would be neutral ground, the clubs would be heartily welcomed, and everything done by the citizens to make the occasion pleasant for all. A communication on the subject from both clubs would be very acceptable, to make known whether or not they could and would accept the invitation. If the boys will agree to play the purse will not be wanting. Let us hear about it speedily.

Mining Items,

SUPERINTENDENT'S REPORT.

Superintendent's office, Modock Con. Mining Co.
LOOKOUT, CAL., March 12, 1885.

J. W. PEW, SEC.—Dear Sir: Started drifts from bottom of winze on the 10th. Southeast drift shows a strong ledge with occasional bunches of ore. Northwest drift shows from two and a half to three feet of clean ore. Amount of ore at the furnace and on the dumps, 134,000 lbs. The ore now being extracted will smelt without flux of any kind.
Respectfully,
FRANK FITZGERALD, Lessee.

PLYMOUTH CONSOLIDATED.

At the Plymouth Consolidated mine, Amador County, the cost for working ors is reported as follows: For mining $3.20 per ton; for milling, $.48 per ton; for concentrating, $.21 per ton, making a total of $3.89 per ton. There is no cause to prevent working ores in Inyo county just as cheaply as the above figures, and at such rates there is ore enough in Inyo county to yield millions of dollars.

PROSPECTING.

Freeman and Coates are prospecting on their claim west of Bishop Creek. They have no men employed and do not want any. No other prospecting is being done in the same locality. Not enough work has yet been done to enable any one to determine what the value of the late discovery may be, nor even to prove if the ore will pay for working. Of course every one in Inyo county hopes Messrs. Freeman and Coates may find millions in it.

CASEY MINE.

At the Casey mine there is a very large quanity of ore in sight: at present Mr. Cook has but four men at work, but enough has been developed in the mine to determine the company to build a mill. On ground belonging to the company there is a vast quanity of low grade ore that will go at least twenty dollars per ton. A way will be found for working this ore.

BROCKMAN MINE.

There is reported to be a large quanity of ore in sight in the Brockman mine, north of Bishop Creek, that contains thirty to sixty per cent copper, and from one hundred to five hundred dollars per ton in silver.

DULL TIMES.

Reasons for Expecting Better Times in Inyo.

Since Inyo county was first settled by the whites, business was never so dull as at present. This statement will not be contradicted by any having knowledge of the facts, and to deny or conceal the truth would be as foolish as dishonest.

But while making this frank admission, let us not forget a few facts of a more encouraging nature. In the way of substantial gain, the amendment to the county Government's bill lately made by the Legislature, will save to the taxpayers ten thousand two hundred dollars a year. This is just so much clear gain. A still further saving of two thousand dollars a year might be made, and not a single public duty be neglected, or not fully discharged. The further prosperity of the county will depend upon the reclamation and settlement of the vast area of rich land now lying in the state of nature in Owens valley. In this direction the outlook is very encouraging. An immense amount of work has been done on the Bishop Creek ditch during the past winter, and the work is still going on. The ditch has been greatly increased in capacity that it will carry three or four times as much water as before. The great body of land stretching south of Bishop Creek for a distance of twelve or fourteen miles may all be irrigated from this ditch.

A company has already been incorporated for a similar extension and enlargement of the ditch on the east side of the river, opposite Bishop Creek. This work will be pushed ahead vigorously. The Big Pine canal, begun about seven years ago, has dragged along slowly, not a dollar of outside capital ever being had to help along the the work. A good deal of work has been done on the canal this spring, and but little is needed to finish it. From the canal as it now stands a great deal of the fine body of land lying east and south of Big Pine can be irrigated. When finished, this canal will supply water to thousands of acres of as good land as ever was turned up to the sun. It is in contemplation to make another ditch, beginning just above Big Pine, that will cost at least twenty thousand dollars. The projector of this work is prepared to spend the money, and is confident that the investment will pay good interest if the land reclaimed should cost fifty dollars per acre. It is very safe to say the land wont cost half that sum, when the work is finished. There are other enterprises in contemplation that will do much, very much, to hasten the prosperity of the county. Of this more will be heard by and by. One of the most encouraging signs of the times is that those who are doing and intend doing most for the good of the county are not making any parade of their work. They neither seek nor desire notoriety, yet deserve to be hailed as public benefactors.

A large extension of orchard and vineyards has been made this spring, and Owens valley will in a few years be one of the greatest fruit producing regions in the state. With the efforts being made by railway companies to open and extend eastern markets for California fruits, the farmers of Inyo will soon find market for all they can raise. The fact is now very clearly established that nothing pays such large profits to farmers as fruit raising. The land of Owens valley is found remarkably well suited to alfalfa. Less irrigation is needed here than on other dry soils. Eight tons per acre were cut last year from ground that had been wetted but twice during the season. For stock raising the valley is not excelled in the state. The business is steadily increasing in the valley, and there is ready market for evrey hoof of beef cattle raised. Horses and mules can be raised without trouble in any numbers desired, and this business is also increasing. Cattle, horses and mules pay much better than grain.

One, and the chief cause of the embarrassment of the farmers of Inyo county, was that they did not know how to change their industries to meet changed conditions. With more experience the necessary knowledge has been gained, and in future that will be produced that is most in demand. Prosperity will surely follow.

If the older settlers are to be taken as witnesses, many farmers in Owens valley in former years spent most of their time in the towns, playing bean poker, and leaving the farming to be done by the Indians. This way of doing business might succeed where grain sold readily at five or six cents per pound, and hay brought forty dollars, or more per ton. Times have changed, and the man who stays with the beans and the poker in the town, will soon have neither beans or poker at home; in fact he wont have any home. For the farmer who is alive to the conditions of the times, and who attends carefully to his own business, Inyo county is full of promise.

In mining matters the prospect is encouraging. The White Hill mine, belong to Alexander, Kehoe and Barnes improves with each days work. During the present week the ledge has opened out much wider than before, and the ore has also increased in value. Samples brought in right from the face of the drift run away up into the hundreds of dollors per ton. The proprietors are about to open at least one more ledge on the same claim and there is great probability of this being an extensive and valuable mining property.

From Cerro Gordo Mr. T. Boland is making regular shipments of ore to San Francisco, and the supply appears such as will enable him to continue shipping steadily. At Lookout Mr. Frank Fitzgerald is having very good success, the mine now looks better than ever before, and he is getting out more and better ore. In the Darwin district J. S. Gorman, J. C. Eddy, F. Silva and others are getting out good ore.

The long legal troubles in connection with Panamint are drawing to a close, and it is safe to say that within a few months there will be a revival of industry there.

At Maxim and Cryysopolis there are excellent prospects for opening up valuable mining properties. At Deep Springs some excellent ore is being found; S. P. Roberts shipped some ore to San Francisco last Thursday that looks very fine, and he has plenty more of like quality.

The Casy mining Company have a very large amount of ore in sight, in their mine four miles above Bishop Creek. This ore is called low grade, and contains about twenty dollars per ton in gold. In any other county in the State the discovery of a large body of ore worth twenty dollars per ton would create a frenzy of excitement. These hasty and imperfect notes give but bare hints of the natural resources of Inyo county; yet even here is enough suggested to warrant the fullest confidence in the future prosperity of the county. Diligence, economy and intelligent effort succeed every where; no where else can better natural advantages of soil and climate be fonnd than in Owens valley.

Personal Mention.

Mrs. Barnaby of Candaleria is visiting at Big Pine.

J. W. Hunt was up from Lone Pine on Thursday.

W. P. George was down from Bishop Creek last Wednesday.

Pap Walker was up from Olancha at the beginning of the week.

Miss Yaney went to Bishop Creek last Thursday, the school term at Fort Independence being ended.

—The school term at Independence closed yesterday. A number of visitors attended the closing exercises.

Fred Uhlemeyer of Big Pine, is dangerously ill of pneumonia; his recovery is considered very doubtful.

Mr. John Grover, who has charge of the signal station at Keeler, has gone to San Francisco but is expected back in a few days.

Harry Burt has leased the hotel at Big Pine and will take possession on the first of next month. Harry is an old hotel keeper.

Bob Lockett was on the down train last Wednesday, he left the valley last Fall and has returned to prospect some mining claim near Keeler.

MR. Rawson is planting one hundred acres to alfalfa on the ranch of Mr. Ezra Goodale. He is also planting a good deal of the same land with grain.

ANNIVERSARY.—At the last meeting of the Odd Fellows at Independence it was resolved to celebrate the coming anniversary of the order by a picnic on Monday, April 27. A committe of arrangements was appointed with full power to do all that may be necessary to make the affair successful. A ball in the evening is proposed. Full information of the programe will be given when the committee have completed their arrangements.

OFFICIAL.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Franklin J. Wall, Plaintiff, against the Inyo Consolidated Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 17th day of March A. D. 1885, for the sum of five thousand five hundred and two 25-100 dollars besides costs amounting to the sum of five and 70-100 dollars, duly attested the seventeenth day of March, A. D. 1885, whereby I am commanded to make the amount of $5507 95 besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

Beginning at the south west corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true Meridian (the magnetic variation being 16 degrees east,) south 74½ degrees, west 7.73 chains to a post in rock mound on limestone croppings on the south side of Surprise Canyon; thence crossing said canyon north 15½ degrees, west, 6.47 chains to a post in rock mound near the junction of Sour Dough Canyon with Surprise Canyon; thence crossing a point of a hill and along the north side of Surprise Canyon north 74½ deg. east 7.73 chs. to the north west corner of the Surprise Valley Mill and Water Company's mill site; thence along the west boundary of said mill site south 15½ degrees east 6.47 chains to the place of beginning, containing five acres.

Also, that other parcel of land beginning a the southeast corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true meridian (the magnetic variation being 16 degrees east.) north 74½ degrees, east 7.73 chains to a post in mound of rocks on the west bank and near the junction of Powder House Canyon with Surprise Canyon; thence crossing Surprise Canyon north 15½ degrees west 6.47 chains to a post in mound of rocks on the north bank of Surprise Canyon; thence down said north bank south 74½ degrees west 7.73 chains to the northeast corner of said mill site; thence along the east boundary thereof south 15½ degrees east 6.47 chains to place of beginning containg five acres.

Also that other parcel of land beginning at a post in rocks on the south east corner of the Wyoming mill site and running thence (variation 16 degrees east,) north 74½ degrees east 7.73 chs. to a post in rock mound; thence crossing Surprise Canyon, north 15½ degrees west 6.47 chains to a post in rock mound; thence south 74½ degrees west 7.73 chains to north east corner of Wyoming mill site; thence south 15½ degrees east 6.47 chs. to place of beginning, containing five acres; being lot No. 42. Also, all the water rights, machinery, fixtures, belting, wheels, furnaces and appurtenances of every nature soever, form rly belonging to the Surprise Valley Mill and Water Company.

Also, all of that certain mine known as the Ida Mine, containing 19.37 acres, being lot No. 48 A.

Also, all that certain mine known as the Independence Mine, containing 18.69 acres, being lot No. 49 A.

Also, the Independence mill site, containing 1.03 acres, being lot No. 49 B.

Also, that certain mine known at the Eureka Mine, containing 18.31 acres, being lot No. 51 A

Also, the Eureka mill site, containing 4.65 acres, being lot No. 51 B.

Also, all that certain mill known and designated as the Surprise Valley Mill.

All of above described property being in Township 21 south, Range 45 east, Mount Diablo Base and Meridian, Panamint Mining District, Inyo county, California.

Notice is hereby given that on

MONDAY, the 13th Day of April, A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 10 o'clock a m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Inyo Con. Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, March 20, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under Sheriff

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNTY of Inyo, State of California
ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,
vs.
S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 20th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3 820 09, upon which there has been paid the sum of $3293 leaving a balance of $527 09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527 09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five. W. L. HUNTER, Clerk.

(SEAL.)
REDDY & CONKLIN, Attorneys for Plaintiff.

Wit and Humor.

"It is a cold day when I get left," said the dealer in anthracite.

This being the season of church fairs, grocery bills must wait.

When a barber gets rich he rises in the world by shear force of character.

There is nothing religious about the lion, but she may not inappropriately be called a lay sister.

The only thing that can be done with the "old long-lost" umbrella is to endeavor to re-cover it.

Abel has turned up smuggling diamonds. They will be raising Cain next.

The close of the old year—well send them to the second-hand clothing dealer.

A one-armed man should be a good euchre player. He always has a lone hand.

"I must shake off this bad habit," said a tramp, as he gazed at his tattered coat.

Because a suit of clothes is loud it does not follow by any means that it is high-toned.

The ice man may not be much of a skater, but he is able to make fancy figures on ice.

A Michigan couple were married one day and divorced the next. She had bad luck with her first pie.

It is impossible to have any floods in France, because the water in that country is always l'eau.

Remembering the poor is well enough; but it is much better to give them something.

A boy with a mustache does not feel down in the mouth. His down is not long enough.

Is it because ignorance is bliss that courting is so much pleasure to young people.

It was Hogarth who said: "I know no such thing as genius." There were few editors in Hogarth's time.

At the ball the girl of to-day says: "Yes, papa, I'm ready to go. Let me dance one minuet longer."

"Some men are always in luck," observed a tramp, upon reading that a man was "drowned in a vat of whisky."

Gentlemen (entering rail car)—"Is this seat engaged?" Self-conscious young lady—"Yes, sir, that's engaged too."

The man who stuffs himself just before going to bed ought not to be unacquainted with the stuff that dreams are made of.

The man who runs a skating rink is beginning to turn up his nose at the aristocratic plumber and the affluent ice dealer.

The young couple who before marriage thought they could live on love are now living on bread and hominy.

The late Lord Brougham, seeing a herald bungle at a court ceremonial, observed that "the foolish man did not know his foolish business."

Dr. Mary Walker says that "she will wear trousers or nothing." Which means that Mary will either be a man or a ballet dancer.

Irishmen are proverbial for their intense admiration of the fair sex. This is probably because so many of the ladies are home rulers.

There is a great deal of fun poked at the baldheaded man, and yet he never gets mad. This is plainly because he is a man of high polish.

"Can you tell me what makes my face look so funny?" asked Fenderson, looking in the glass. "Nose, sir," was Fogg's laconic reply.

Don't fret if you cannot get into society. The oyster is often present at a supper when he would perhaps prefer to be at home in his bed.

"Age before beauty," said the restaurateur's clerk to a charming lady customer, as he placed a very substantial fowl before her smiling presence.

A family of the South Side having a daughter prone to prevaricate, keep her constantly at home, so, as they say, "to have Anna nigh us."

A Chicago humbug has cleared thousands of dollars by advertising: "How every lady can make her feet small enough to wear a No. 2 shoe."

No, a barometer is not an instrument for squirting bay rum down the back of a barber's patient. Such barberous practices go on in the old way.

A camel will work for seven or eight days without drinking. In this he differs from some men who will drink seven or eight days without working.

Don't squeeze any small, square and suspicious-looking envelope that happens to come in your wife's mail. It will probably contain her new bonnet.

Mamma—Yes my child, we shall all know each other in heaven. Edith—But, mamma, we can make believe we are out when some of them call, can't we?

A Yankee editor says: "If the party who plays the accordeon in this vicinity at night, will only change his tune occasionally, or sit where we can scald him when the engine has steam on, he will hear something to his advantage."

Some years ago a lady in Boston died. Her husband being a strong spiritualists, desired to hold communication with his departed, and inquired if she was happy. "Oh, yes," was the reply, "I am happy here; yet, after all, it isn't Boston."

"Getting orders now?" asked one traveling man of another, in a dull town in the south. "Got one to-day," was the reply. "Don't believe it." "I did all the same." "What was it?" "Order from the house to come home."

"Anna, what must you do, before everything else, to have your sins forgiven?" "Commit the sins."

MEASURING HEAT.

Some Facts About the Truthful Thermometer.

"Thermometers are curious instruments," said Joseph Spitz, of the firm of L. Black & Co. "Sometimes we find one that is all right at certain points and at others it will vary in several degrees."

"What causes the variations?"

"The irregularities of the tube. They are frequently imperfect. At some point the tube may be too large and when the mercury rises to that point it is depressed too much. The tubes have to be seasoned. This requires a year or two. Glass changes almost like wood. When it is new it expands, contracts and warps almost as badly as green wood. Frequently people come in and tell me that their thermometer registered fifteen or twenty degrees below zero when in fact it was only ten or twelve degrees below. All cheap thermometers vary more or less."

"Where are the best thermometers made?"

"In London. There are two manufactories in this country, one at New Lebanon, N. Y., and the other at Rochester. The imported thermometers are too expensive for general use."

"How are they made?"

"The tube is blown the size wanted, the top being left open. The bulb is heated to expel the air and while hot is inverted in a cup of mercury. As the tube cools the mercury is drawn up into the tube. The open end is then closed up and the tube placed on a scale. It is put into water of a known temperature and the point to which the mercury rises is marked. A number of tests of this sort are made before the instrument is placed on the market."

"How can we tell whether our thermometers are accurate?"

"There is at Harvard University a place for testing thermometers. They are carefully examined at various temperatures and any variation is marked. A certificate is given with every thermometer examined."

"Which scale do you regard as the best?"

"The centigrade, by all means, is the one that should be generally adopted. In this system the freezing point of water is taken as zero and the boiling point of water at the sea level is 100. The Reaumur scale is the same except that the boiling point is 80."

Mr. Spitz showed the reporter a number of thermometers made for scientific uses, which are very expensive. For the use of brewers there is a thermometer about three feet long, with a bulb two feet in length. The scale of this is short and is marked for only a few degrees above the freezing point. An instrument of English make was also shown, which is filled with a green composition containing phosphorous, and is visible in the dark.

"Spirit thermometers," continued Mr. Spitz, "are used for very cold climates, as mercury congeals at thirty degrees below zero. They can not be used to measure extreme heat, as above a certain temperature the liquid expands too fast. It boils at 160 degrees. For very high temperature the pyrometer takes the place of the thermometer. The heat is measured by the expansion of metals, and the instrument will measure heat accurately up to 7,000 degrees. There is a thermometer made in Buffalo on the same principle as the pyrometer and can be placed at the back of a watch."

Wise and Otherwise.

The silk hat is only fifty years old.

Curling locks are now a covetable natural gift, for curls, real or produced by the tongs, are decidedly in fashion.

There is to be a revival of smooth faces among society men. The mutton chop must be chopped off and the goatee must go too.

An esteemed contemporary has an article headed "Prof. Proctor on the Moon." It doesn't explain how the Professor got there.

A Kansas cowboy stopped a stage full of passengers and made them wait while he read a poem of thirty-two verses dedicated to his Mary Jane. There are some things as bad as shooting.

Senator Wade Hampton assisted Rhea, the actress, at a reception of President Arthur the other evening. She wore a $4,000 dress and her dialectian English fairly astonished the President.

The canal which Germany intends to construct to unite the North and Baltic seas is to be large enough to admit of the largest war vessels passing through it. It is estimated that the work will be completed in five years.

The Royal Academy of Sciences of Germany has again undertaken the search for the site of the famous battle field in the Teutonburg Forest, in which the Roman General, Varas, was beaten and killed by Teutons under Arminius.

The age of an elm has been estimated at 335 years; that of some palms at from 600 to 700 years; that of an olive tree at 700 years; of a plane tree at 720; of a cedar at 800; of an oak at 1,500; of a yew at 2,880 of a taxodium at 400; of a bab tree at 5,000 years.

Mexicans have a curious habit of presenting you with anything you happen to express a fancy for—from the rings on their fingers to their residences and all they contain. But then they don't mean you to formally take the gift. It is only their way of being polite to you.

From the record of inundations which have for ages been the scourge of Holland, it would appear that during the last thirteen centuries one of the larger floods has occurred on an average once in seven years. About 600 years ago the sea broke through its restraining dykes and 80,000 persons are said to have perished. In a single night, in 1421, 72 villages and 100,000 human beings were swept away.

SALOONS.

IRWIN'S SALOON,

Cor. Edwards & Market Streets,

Another Happy One.

A German prince was on his bridal tour. He was, of course, accompanied by the princess, his bride. The happy coupled traveled incognito, leisurely through the beautiful black forest, stopping a day or so at the little village where they could dall about in each other's company unobserved and unknown, enjoying the beautiful scenery.

While sitting under the shade of a tree near the road side the prince, placing his arm around the waist of the princess, just as any ordinary mortal might have done under similar circumstances, exclaimed in an ecstatic voice, looking upward:

"I wonder, dearest Louisa, if it is possible for any other two living human beings to be as happy as we are?"

The young wife sighed a happy sigh, and then they indulged in speculative theories as to the possibility of a couple being as happy in an humble cottage on a small salary as in a gorgeous palace, and living on a princely avenue. Just at this crisis, a sturdy peasant came up the road, singing a merry roundelay.

"Suppose we ask this rustic if he is really happy," suggested the princess.

"Come hither, my good friend, I wish to ask you something," said the prince, adjusting his eyeglass.

"'Propel," replied the happy peasant.

"Are you really as joyous as you seem to be?"

"What are you givin' me?"

"I merely wanted to know if you are really in as beatific a frame of mind as you appear?"

"Yes, I guess I am as happy as most people get to be. I get enough to eat and drink, and I've got an appetite as big as that of a letter carrier. Wife and children are in good health. I haven't got anything in particular to grumble about."

"Then I am to understand that you have no cause for annoyance."

The happy peasant scratched his head, and replied:

"Now, that I come to think of it, there is a little improvement I might suggest. You see, I work pretty hard during the week, and on Sunday I don't object to going to the tavern and moistening my clay with a glass of beer. Old friends come in, and then I worry down a second glass and after a while third, and by the time I go home I've generally managed to surround eight or ten glasses. And then my wife Molly goes for me. May be she doesn't make it tropical in that immediate vicinity. Now if it were possible to have her temper toned down a little I don't think that I should object very much."

"Shame on you!" exclaimed the princess indignantly. "According to your own statement, you are little better than a drunkard. You guzzle beer, thus squandering the money you should spend on you wife and children, who with your bad example before their eyes will surely turn out badly, and when your poor wife very properly rebukes you, instead of heeding her counsel, you jeer at her. Oh, you wretch!"

The happy peasant stood with open mouth, almost dumbfounded at the torrent of abuse from the princess. Winking slyly at the prince, the happy peasant punched him with his inverted thumb in the ribs, and remarked, as he moved off:

"Just such another she-devil as my Molly. You don't know how much fun there is in store for you."

"Rinkurating," meaning to skate in a rink, is the latest new word added to the English language. The young man who coined it received a reward the following day.

Examiner—Now, can you tell me which of the planets were known to the ancients?" Student—"Ah, there was Venus and—ah—Jupiter—and—and—I think the earth, but—but—I'm not quite certain about the latter."

"Yes," said little Gracie, who was spending the summer at her aunt's in the country; "yes, aunty, I've put the chickens all to bed, and they are fast asleep." An investigation found the chickens in the warm kitchen, each with its head under its wing, just as comfortable and dignified as a grown up fowl could be. Gracie had seen the hens a-roost, and she gave the chickens their first lesson in sleeping away from their mother.

THE LIME-KILN CLUB.

Official Proceedings—Immense Profit in Discovering Comets.

Elder Toots having got most of his feet under the redhot stove, and Col. Cahoots having succeeded in knocking down a bust of Plato and wrecking $500 worth of relics, Brother Gardner arose and said:

"What I hanker arter am to meet a plumb up an' down man. Dar' am pussons in dis club who wobble about like a loose wagon wheel. One day dey greet you wid a grin as soft as June, an' de nex' day doan' know you as you pass on de street. I doan' mean to hurt no man's feelin's, but I mean to be plumb.

"If Whalebone Howker should come ober to to my house an' ax de loan of a dollar I wouldn't keep him on de hooks fur half an hour fur a decision. I should at once reply to him: 'Whalebone, de man who uses money airned by his wife at de wash-tub to buy lottery tickets can't get no dollar outer me!' When a man axes my religion I doan' beat aroun' de bush to find out if he has found a short cut to Heaben, but I denounce myself as a Baptist an' take my chances by de old road.

"When you think yes or no doan' hesitate to say so. Doan' be leanin' one way one day an' some odder way on de nex'. De man who knows whar' to find you won't go away mad, eben if you decide agin him. Our Samuel Shin am one day gwine to be a statesman an' on de nex' he's gwine to open a saloon wid a gilded ceilin'. One day you will find him a Methodist an' de nex' you will see him devourin' a Universalist sermon. Meet him in de mawnin' an' he am a ferosius Republican; catch him in arternoon an' he am a good Dimocrat.

"Be plumb up an' down. If you am sot on bein' good, stick to it. If you am sot on bein' bad doan' let de purleece bluff you off. If you like a man tell him he kin hev de use of your snow shovel all summer. If you can't hoe co'n wid him, ax him to buy out or sell out an' take some odder cow path. De wobbly man am a passon to be shunned. Tryin' to do bizness wid him am time wasted an labor frown away."

AFTER COMETS.

The Chairman of the Committee on Astronomy submitted his quarterly report, from which it was learned:

1. The committee have come to the unanimous conclusion that the moon is inhabited, but have thus far failed to open up social or commercial intercourse.

2. The sun moves, and don't you forget it! If the sun doesn't move, how does it get from east to west? Besides, why should the earth fool away its valuable time by moving around the sun?

3. The next eclipse will be arranged to come off on the Fourth of July, in order to add zest and enthusiasm to the occasion.

4. The Rochester Observatory having offered $200 apiece for all the new comets discovered during the year 1885, the committee has purchased a $2 telescope and arranged three red chairs on the roof of Paradise Hall, and will put in some heavy squinting at the heavens as soon as the thermometer takes a climb. In case 500 comets are discovered, the committee will donate $7,000 towards building a new Paradise Hall.

IT DIDN'T PASS.

Prof. Springfoot Bowers then offered a resolution to reduce the initiation fee from fifty to twenty-five cents, making the general hard times his excuse for so doing.

"Brudder Bowers, does it cost any less to git into the Legislachur or Congriss dis y'ar dan it did last?" asked the President.

"I reckon not, sah."

"Den why should de Lime Kiln Club begin a cut on prices?"

Brother Bowers didn't know, and the resolution was dipped into hot water and laid on the window-sill to crystallize.

THE LIBRARY.

The Librarian reported that he had received during the last quarter 522 volumes, 520 of which were almanacs published by the poets St. Jacob and Hostetter. He had now over 18,000 almanacs on hand, and anybody wanting to know the date of the month for fifty years back or ahead could be instantly accommodated. The library had been open this winter five nights in a week, from 7 to 10 o'clock, and the average attendance had been thirty two. It grieved him through and through to be compelled to add that a majority of those dropping in spent most of the time in chewing plug tobacco and talking politics. He had no recommends to make in this direction, but desired to enter his solemn protest against remaining longer in charge of the room unless it was provided with a fire escape. As matters now stood a fire on the stairs would compel him to jump from a third-story window. The matter was canvassed pro and con by several members, and the President finally dismissed the subject by saying:

"I has ten feet of rope at de house which I will bring down, an' in case of a fiah de librarien kin splice on his suspenders and drop de rest of de way down."

SPRING WHITEWASHING.

Waydown Bebee desired to indulge in a few remarks on the subject of spring work. He presumed that his fellow-members realized the fact that art had taken gigantic strides in the last ten years. In by-gone days the finest residences asked for nothing better on the ceiling than whitewash laid on in separate colors and picked in with the Roman shade of calcimine. In these days the humblest citizen demanded art by the sled load. Plain whitewash, even for an alley fence, had seen its day. Every member pursuing the trade must make himself an artist and study colors and lights and shades. He must also have more pay, and Brother Bebee moved that the President appoint a committee of three to canvas the matter and report.

The President appointed Messrs. Bebee, Walpole and Blazes as such committee, and intimated that the rates for spring whitewashing should be advanced at least twenty-five per cent.

THE CLOSE.

The meeting was then called upon to sit still while Prof. Highstrung Smith recited an oration entitled, "A Storm at Sea." The sea appeared to be considerably agitated. So did the Professor, and when he was finally carried from the Hall in a limp condition the meeting adjourned.

Lord Stewart.

A. T. Stewart awoke one bright spring morning. After a short prayer he rose and dressed himself with more than his usual dispatch. He then drew up the curtain of his window and looked out at the huge marble palace which had just been finished at the corner of Thirty-fourth street and Fifth avenue.

As he stood looking at the gorgeous dwelling which he intended to make his home the next day, three ideas impressed his mind with increasing intensity.

He thought of the marble contractor whom his own close figuring had driven to suicide. Pshaw! it was but the fortune of war. He dismissed the thought with a shrug of his shoulders.

The second mental picture was more persistent. It had long been his august custom, on entering his store on a rainy day, to lean against the nearest pillar, and lift his foot in silence. This was the signal for a fierce competition between his partners and employes for the privilege of taking off his lordship's rubbers. The day before it had so happened that a western newcomer had been first on the spot. Instead, however, of deftly removing the dripping rubber, the novice had jerked his master's heel higher than his head and seated him on a more secure but less dignified foundation than a single foot. The deep frown upon Stewart's brow augured ill for the uncouth barbarian should he ever fall into his former employer's power.

But this thought was driven away by a third far more annoying. The best of the girls who ran his heavier sewing machines had been offered $2 a week higher wages by another firm.

"The ingrate!" he muttered. "To try and blackmail me out of two dollars a week. She must go. The house is bleeding at every pore."

But the sight of his marble palace glittering in the morning sunlight drew even this thorn from his memory, and he gave free scope to his joyous anticipations. His keen mind knew the effect of marble and money on men's imaginations, and he already saw his palace the Mecca of the aristocrats of the whole country. In a happy reverie he went down stairs, breakfasted and drove to church.

His day-dream was rudely broken by his clergyman's text.

"But God said unto him, 'Thou fool, this night thy soul shall be required of thee; then whose shall those things be which thou hast provided?'"

The great merchant fixed his eyes upon the preacher, who was an orator of no mean ability. The man of God painted the state of the rich man, who fared delicately every day and whose only care at length grew to be the question what to do with his overflowing wealth.

"And he said, 'This will I do; I will pull down my barns and build greater. And I will say to my soul, Soul, thou hast much goods laid up for many years; take thine ease, eat, drink and be merry.'

"But God said unto him: 'Thou fool, this night thy soul shall be required of thee.'"

Stewart trembled; he was seized with a superstitious presentiment that the day he went to live in his palace would be his last day on earth. He forgave the sewing machine girl; and in that same hour began to think out those great schemes of philanthropy, that after his death were frustrated by his executors. This was the real reason why Stewart's palace remained so long vacant.

So many prominent people come to Albany that the average distinguished citizen is not as big a man in Albany as on his native hearth. This was unconsciously illustrated by Colonel McClure's visit. After calling on the President elect he went back to his rooms at the Delavan, wrote a column account for his paper and sent it to the Western Union office by a special negro servant. The account was long, was sent "collect," and the receiving clerk looked over it and said: "Who is this McClure, anyhow?" "I dunno," replied the negro; "he talks as if he owned the whole paper, but I dunno." "George," called out the clerk of a New York correspondent who was just sending off his matter, "is this fellow McClure good for a column to the Philadelphia Times?" And this is fame.

The average of human life is thirty-one years.

WANTED "THE BEST."

How She Got It After She Had Scared The Grocer.

A buxom, matronly looking woman accompanied by a lad about 17, entered a grocery store on Saturday evening in the neighborhood of 29th street and 3d avenue.

"Vat vas it you vant alretty?" queried the clerk, a ruddy-faced German with a mild blue eye.

"Let's see your butter."

"By grazhus, we joost got bully budder, and for feefdy cents pi der bound."

"Well, let's see it."

Several samples were produced.

"Dot vos funf-und-drizing, dot funf-und-viersig, und dot vos funfzehn cends pi der bound. D'raps you like to bite sum of dem dings," handing the woman a cheese scoop to taste the three samples.

She looked at them, tasted them, and smelled them, but none appeared to give her any great amount of satisfaction.

"And this is the best, is it?" pointing to the 50-cent article.

"Dot vos the beshtest budder it vos possible to make dot budder from, pi jimminy, am vorth fife tousand tollers eflery time."

"You're quite sure it's the best butter?"

"If dot vos not der very beshest dot can't be made I makes you a present mit the whole shtore," persisted the blue-eyed youth.

"Then let me have half a pound of it, and the woman planked down a quarter. Tie it up securely as I've some distance to go."

He did as requested.

"Now let's have one of your cards, because I've walked nearly all over Yorkville trying to find a place where I can buy good, honest butter."

The clerk, anticipating a possibly good customer, handed out a card.

"Now, Johnny," turning to the lad, "just write the boss's name on the wrapper, let me see, I think, it's just about 9 o'clock. Put down the time, too."

The proprietor of the store pricked up his ears like a mule, as he saw the deliberate manner in which the affair proceeded. "See here, my man," remarked the purchaser, "I'm not sure whether you know it or not, but there's a law which fines people $100 for selling stuff that some grocers call butter. I hope you're not one of 'em. If you are you'll hear from me, sure." Then she gave the store door a bang and waited on the corner for the next up-town car.

Just as she signaled the driver the German youth overtook her, and, shoving a quarter in the boy's hand, said:

"Der boss tole me ter gif ver mudder dot money. May be dot vost de wrong gow dot make dot budder."

Victor Hugo.

In 1870, Victor Hugo labored steadfastly against the Plebiscite which Napoleon had placed before the French people, and, in one of his letters, said that the Plebiscite was an attempt "to render arsenic palatable." When the Franco-Prussian war broke out, he urged the ladies of Guernsey to prepare bandages and lint for the wounded, and to send half of those charitable stores to the French and the other half to the Germans.

He resolutely remained in Paris during the siege. He wrote almost incessantly. He labored and suffered with the humblest; his example was inspiring, and his words as good as deeds. He was one of the earliest to make a speech against the preliminaries of peace, apparently thinking that, as the Germans had lost their great opportunity for a reconciliation after Sedan, it might be as well to fight the battle out. He resigned because the members of the "Right" refused to listen to him on one occasion, as they had refused to listen to Garibaldi three weeks previous.

During the commune he stayed in Paris. At the close of the insurrection he went to Brusseis, and, in May, wrote a letter condemning the decision of the Belgian government relative to the insurgents. In his letter he publicly invited communist refugees to seek an asylum in his house. The Begian ministry thought this was compromising to the nation's interest, and a royal decree required M. Hugo's immediate departure. Before he could go, his dwelling was besieged by a furious mob, and he was rescued by the police with difficulty. He once more departed for London, as he had done when exiled before. He returned to Paris after a brief absence.

To-day a serene old man, Hugo lives quietly and modestly in Paris, up three flights of stairs, in the Boulevard de Clichy. His fine, keen face, framed in a grizzled beard, his penetrating gaze, his earnest and concentrated manner, hardly allow one to believe that Victor Hugo is nearly as old as the century. Few men at his age are as alert and vigorous, even though they have led far less exciting lives. He is the center of a brilliant society, which adores him; he is universally called called Cher Maitre by the literary and artistic guild; retains the charming effusive manners of the old school, putting all the younger Frenchmen to shame by the excess of his gallantry, and now and then goes to Guernsey to hear the song of the sea, and to read his poems by the beach.

A conscientious milk man never wears pumps.

MALTESE AND ANGORA.

A Sort of Pets that Many Ladies Prefer to Small Dogs.

"Is it possible," asked the reporter, "that Maltese and other fancy cats are taking the place of dogs as ladies' pets? It is said that in Washington ladies go out shopping, taking with them Maltese cats fastened with gilt chains to their girdles."

"Well, I don't know whether cats will ever supplant dogs in the affection of the ladies," laughingly replied Surgeon B. G. Dovey, as he sat in the office at No. 26 West Fourth street, in front of a door marked "Private," where both dogs and cats were for sale and under medical and surgical treatment; "but there is no doubt that the Maltese and Angora cats have become great favorites. Still, there is no greater demand for the former than there was three years ago. The Angora cat has probably increased in popular favor, and now on any fine day, one may see ladies driving in Central park with the beautiful creatures in their laps. The Maltese, too, are often taken for a drive, and both they and the Angoras seem to enjoy the fresh air fully as much as their mistresses do. No, cats are not often taken out walking. A cat is not fond of long walks where there are no fences to climb, and dogs may be encountered, but the lazy luxury of a carriage seems to suit them. The Maltese and Angora cats are very docile and affectionate. The Maltese, probably, can be more easily and thoroughly domesticated than any other of the feline tribe. They are less expensive than the peerless Angora, but still they come pretty high. I can sell a full grown male for about $12, and male kittens for from $8 to $10 each. The females are cheaper, being worth about $2 each. A well grown Maltese cat should weigh about twelve pounds. They are long lived, and, if properly treated, should attain a score of years. A perfect Maltese cat should be altogether slate-colored, without a particle of white. Most of them have six toes, and very large feet, but they may be pure-bred and small feet and only five toes. They came originally from the island of Malta, but to-day America, or even New York state, produces more Maltese cats than Malta does.

"These Maltese cats, as a rule, are hardy, but they are usually kept so closely confined to the house, and often fed so injudiciously, that they are liable to get indigestion, torpid liver and fits. When the fits appear death is likely to appear close at hand. They are brought to me often when there is no time to treat them. Sometimes I am called upon to attend a cat afflicted with what the owner thinks is an abcess, or a tumor, but which frequently proves to be a cancer. Nothing then can help them except an operation, but if the disease has not made very great progress I can generally operate successfully. With dogs cancer is much more common, and I often have to remove it. Sometimes I use ether; but I can save life far more frequently than surgeons who treat human patients.

"A litter of Maltese kittens number from three to seven. They grow quickly, and are very playfully interesting. The Angora is as different as possible from the Maltese. My wife takes exclusive charge of our stock, and is as devoted to them as though they were children. The Angora came, and comes yet, from Persia, but we raise a good many in this country. They are of various colors—pure white, black, white and black, yellow and white, gray and white, steel and white and mottled—but all are alike beautiful. Their hair is very abundant, long, fine, and soft as silk. Their tails are bushy as those of foxes. Their ears are small and far apart, and their eyes are large, sagacious and of a light olive color. They live from twenty-five to thirty years. Its price they average, for male kittens $40, and for full-grown males $125; for female kittens $25, and for full-grown females $100. The Angora cat is, I think, the handsomest small animal that lives."

Bill Nye's Philosophy.

To the young the future has a roseate hue. The roseate hue comes high, but we have to use it in this place. To the young there spreads out a glorious range of possibilities. After the youth has indorsed for an intimate friend a few times, and purchased the paper at the bank later on, the horizon won't seem to Horizon so tumultuously as it did aforetime. I remember at one time of purchasing such a piece of accommodation paper at a bank, and I still have it. I didn't need it any more than a cat needs eleven tails at one and the same time. Still the bank made it an object to me, and I secured it. Such things as these harshly knock the fluff and bloom off the cheek of youth, and prompt us to turn the strawberry-box bottom side up before we purchase it. Youth is gay and hopeful, age is covered with experience and scars where the skin has been knocked off and had to grow on again. To the young a dollar looks large and strong, but to the middle-aged and the old it is weak and insignificant. When we are in the heyday and fizz of existence, we believe everything, but after awhile we murmur, "What's that you're givin' us?" or words of a like character. Age brings caution and a lot of shopworn experience purchased at the highest market price. Time brings vain regrets and wisdom teeth that can be left in a glass of water over night.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, MARCH 28, ...1885

C. Mulholland,
EDITOR & PRORPIETOR.

CALIFORNIA redwood sells readily in England at $51,66 per thousand feet. It is used for furniture and fine carpenter work inside of buildings.

FROM Independence, the county seat, to Resting Springs, in the south east corner of Inyo county, the distance is three hundred miles, and a long stretch of the way is through Death valley. The milage allowed for making the trip on official business is three hundred dollars. The taxable property there yields to the county a yearly revenue of forty dollars. The place can be easily and cheaply reached from the county seat of San Barnardino county. If that county would accept the territory surely it would be betfer for Inyo to cede Resting Springs to San Barnardino county.

A deserted mining camp is one of the most dreary places that can be imagined. The former busy town of Mammoth in Mono county is described as follows in the Bodie *Free Press*. From the Punch Bowl, six miles from Williams ranch, snow continues to Mammoth, the average depth of which is about three feet. No signs of animal life any where. Snow ceases at Casa Diablo Springs, and Long Valley to the southward is clear as far as the eye can reach. Teams from Bishop Creek can get within three miles of Mammoth. Not a soul to be seen in the old town of Mammoth. Houses overthrown by wind, tables, chairs, beds. etc., in wild confusion. Roofs breaking and broken down under weights of snow: clanging doors and shattered windows showing the deserted interiors. The once lively streets are filled with broken odds and ends incident to a hasty departure. Lying around in every direction are chairs, tables, counters, shelving, saloon bars, mining tools, old wagons, stoves and pipes, etc. Forlorn saloon signs and tattered Chinese hieroglyphics flutter in the wind. The old tram way is broken down and scattered. The old Mammoth mill battery and pan room has caved in upon the machinery. Office, stables, boarding houses are in good condition. An immense lot of wood lies piled at the foot of the tram way and mill. Mineral Park and Pine City present the same appearence as described above. The snow is from four to five feet deep, and on the big lake it is three feet with four feet of ice Boats of all kinds lie half buried on the banks. The west side of Mammoth hill is free from about two-thirds of the distance from the summit down.

THE very commendable course taken by President Cleveland in the distribution of offices is giving great dissatisfaction to the office-seekers, especially those of the South. A Washington correspondent says: "Salmon P. Chase, Secretary of State and Chief Justice, when aspiring to presidential honors, first crowded Departments and Federal offices everywhere with Ohioans. Grant was even more generous to children of Ohio. He thrust them in everywhere. Then came Hayes, who was even more generous to Ohioans. Garfield devoted his brief term of service to Ohioans. John Sherman, who drove the car of Juggernaut over myriads of poor farmers who happened to owe balances on mortgaged farms, bankrupting the multitude that the value of money might be doubled, and property lessened in value one-half, could only retain his place in the Senate by buying with offices dispensed among sons and nephews of members of Ohio Legislatures, the high place he fills. Ohio became the Governing State of the Union. When shamelessness and local selfishness blushed and dared go no further, the South became the Botany Bay for insatiable Ohioans, and postoffices and marshalships and collectorships of the South were packed with Ohioans. Countless Department clerks from Ohio claiming to be Texans and Georgians and Alabamians and Tenesseeans, fill the bureaus and sinecures of every Department. And yet the President talks about the tenure-of-office act. Senators Hoar and Edmunds would organize "secession" in Boston if New England offices were filled with Texans or Alabamians. There is no law of Government or of reason and right to prevent the just distribution of offices and sinecures among those bearing equally the burdens and entitled to share alike the benefactions of government; and President Cleveland, when cognizant of facts here recited, can hardly fail to reconsider his purpose, embodied in his significant speech to the representatives from Alabama. It was this tenure-of-office act that enabled Blaine to carry Ohio against Cleveland, even as it is this tenure-of-office act that enables John Sherman to supplant one of the foremost statesmen of America, Thurman, in the Senate of the United States. Why may not the Alabamians send General Dudley to present their griefs to the President."

ETIQUETTE OF WHIST.

Bill Nye Tells How To Make Whist Entertaining.

There are certain suggestions and notes relative to the manner of playing the modern, scientific game of whist, which we do not find in the dry rules laid down by our best writers. While they tell us the mechanical operations of playing and how to make the most of the cards held, they do not tell us what small talk should be inserted between hands in order to lighten the sombre routine of play. For instance, should the dealer spill the cards on the floor while trying to shuffle them, many would not know what to say in order to relieve him of his embarrassment. You should at that time ask him if you had not better procure a bushel basket for him to shuffle in. This will at once produce roars of laughter and the game will proceed smoothly. Mr. Hoyle has omitted such suggestions as these, and I have taken the responsibility of naming a few.

Should you wish to gain the esteem and admiration of your partner and other lovers of whist, occasionally ask, 'What's trump?' and yawn, so that the players may admire the filling in your wisdom teeth. This shows your intense interest in the game and gives your partner perfect faith and childlike confidence in your play.

The game may be greatly enhanced by the hesitation of a player when a new suit is introduced, and his bright, crisp and original remark that he'll be hanged if he remembers whether the ace of that has been played or not.

This will show every one that an Allwise Providence, seeing that you wouldn't know what to do with an intellect if you had it, saw fit to give yours to a cow.

If your adversaries gain the rubber and one of them does the scoring, make the remark that it is haff in counting and suggest that you will keep the books yourself hereafter. This joke is still in good repair, and you can now get it with your pack of cards and counters of any first-class dealer. The game of whist is very much brightened up by these remarks, and I would no more think of getting whist cards, etc., without securing the jokes that go with the pack than I would go into the minstrel business without "Noah's Joke Book" and Adam's great work entitled, "Mirth Without a Master; or, Every Man His Own Damphool."

Should your partner trump a trick which is already your own, show your superior knowledge of the game by abusing her if she be a lady. This will convince her that you are a gentleman and that you knew more about the game of whist than you do about common decency. The blood of but one human being is upon my hands. It is the blood of a man who played whist against me one evening and scolded his partner till the tears came in her beautiful eyes. He claimed that he had a right to do so because she was his wife, but that didn't make any difference with the coroner's jury. She makes a mighty fine-looking widow, and I do not regret the part I took in the tragedy.

There are two kinds of brute vertebrates. One wears hair and has the decency to stay out of door; the other wears clothes and makes money and insists on coming indoors and playing whist and abusing his partner. One hangs by his tail to a forest tree and behaves himself; the other hangs by his purse-string to decent society and makes himself obnoxious.

Should your mind wander while playing the game of whist, so that you foolishly throw away a trick, third hand, take back your card and substitute another, laughing merrily all the time. Your remains will look much better when arranged for the tomb if you die with a smile on your face. If you wished to be loved by all who know you, and if you wish to secure an early immortality, insist on throwing away tricks in the third hand, yawn till the top of your head settles out of sight, and occasionally ask, "What's trumps?"

Lots of people of that kind have died suddenly during the past five years, and many thought their deaths were caused by some secret society, but they were not. It's getting so now that if a man plays whist that way, the life insurance companies will not insure him, and I don't blame them. I'd as soon insure the man who goes around with his coat-tail pockets full of czar busting bombs.

The Story of a Wedding Dress.

There is at present in New York seeking a purchaser a marvelous thing in the way of point d'alencon, which must have cost years of patient labor. It is beautifully worked in flowers and fern leaves in the designs of a garland and served with a veil of the same beautiful workmanship, as a part of the bridal toilet of a young girl, at that time the only surviving daughter of a well-known widow lady. The bride who wore this dress married the only son and heir of one of the richest of Baltimore's merchant princes. The lace was a gift from the groom. Six months later the young wife died. Her husband, frantic with grief, could not bear the sight of anything reminding him of the past, and all the personal belongings of the young wife were sent to her mother. This was years ago, and now that mother in her old age, is left destitute. One by one her valuable possessions have been sold, until finally the bridal robe with its pathetic history, concerning which its next owner will care but little, pleads for a purchaser.

A Stamford dog which has been used to drink at a certain trough found it empty the other day, but a hose lying close by. After evident consideration he picked up the hose in his mouth, put the end in the trough, and waited for the water to run. It is pleasant to know that having got so far there was a kindly witness who turned the stop-cock, so that the dog's hopes were realized.

Marriage Fairs.

Marriage fairs still have their day in parts of Europe. The marriage fair was held as usual this year on St. Michael's Day in the little village of Penze, in Brittany. In pursuance of the singular custom all the marriageable girls with a dowry, dressed in their best finery, climb on the parapet of the bridge, on which they sit in rows. Naturally enough all of them are anxious to win a suitor; they therefore vie with each other in showing their personal attractions. One shows a fine waist; another allows a pretty foot and ankle to peep out from under her dress; a third bares a shapely arm, while a fourth exhibits a forest of long hair. The eager youths soon advance along the footway of the bridge and examine the eligible girls.

They, too, are at great pains to make the best possible impression; this one curling and incipient mustache, that one throwing back his thick locks, and others, again, walking to show off their upright bearing. When one of them fancies one of the girls he steps up to her and offers his hand to help her to alight from the parapet. If he is to her taste she takes the proffered hand, jumps down, and negotiations at once begin with the parents standing by. Should all inquiries turn out satisfactorily on both sides the young couple strike each other's open hand, and the affair is concluded. The marriage follows soon after.

Throwing Down The Gauntlet.

From time immemorial throwing down the gauntlet has been a symbol of defiance, a challenge to battle both in real contests and in the mimic warfare of tournaments. Virgil, in the "Fifth Book of the Æneid," as we have seen, represents Entellus as casting a gauntlet on the ground before entering the lists with dares. In the middle ages, when the leaders of opposing armies challenged each other to single combat, a herald bearing a glove was sent with the message. Shakespeare makes Henry V., when he engages under a incognito in a wordy dispute with one of his soldiers on the eve of the battle of Agincourt, exchange gloves with him as a proof that if they both survive the battle the quarrel shall be settled with blows. Among the Highlanders the custom of employing the glove as a sign of challenge given or vengeance to be taken lingered long, "Did one of them break faith? The surest remedy was for the injured person to appear at the next meeting place, bearing a glove on the point of a lance, and proclaim the perfidy. The symbol aroused so keen a sense of right, so fervently appealed to their rough justice, that the offended was often slain by his own clan to wipe out the disgrace brought upon them." To bite the glove was the sure prelude of a quarrel:

> Stern Rutherfor right little said,
> But bit his glove and shook his head,

Writes Scott in the "Lay of the Last Minstrel."

A Penalty of Fame.

It is bad enough very often to have the genuine letters of a great man published, but at least it is desirable to guard against spurious imitations of professional forgers. Only the other day an illustration was given in the life of Mr. Whittier of the kind of legend which may pass current among the stolid part of the public. A circumstantial story of how Thackeray fuddled himself at his club in company with Whittier (whom, as it happens, he had never seen, and who has never been in England) has, it seems, been going the rounds of the American press. The story was repeated only to show its utter impossibility, but such stories may be circulated by the unscrupulous penny-a-liner without the contradiction. When "Jane Eyre" was a new book, one of our most eminent reviewers did not scruple to give currency to the impossible story that its author was a discarded governess of Thackeray, who had stood for Becky Sharpe, and revenged herself by a portrait of Thackeray as "Rochester." The smallest knowledge of facts suffices, of course, to destroy such fictions for all intelligent readers. They show, however, how rapidly a legendary halo of fiction grows up round any eminent name; and though, happily, the forger is seldom clever enough to be armed at all points, we can only say that the most absurd fictions are finally exploded. If a man has the luck to tell a probable tale, it may thrive for a long time: indeed, every one who has looked into the anecdote literature about great men of remoter periods, knows that a presumption is against the truth of any anecdote not resting upon indisputable first-hand evidence. Shakespeare has been accused of drunkenness, as well as Thackeray, and we cannot now cross-examine the witnesses or test their means of information. If our opportunities for investigations are now greater, so is the appetite for scandal, and it looks as if there would be room for a society for the preservation of established reputations as well as of ancient buildings, if the flood of libellous inventions is to be kept within bounds.

Sympathize with Poor James.

"I see you have bad news, Jim."

"What's that?"

"Your rich old uncle's dead."

"Oh. Yes, he's dead at last."

"How much did he leave you in his will?"

"An even half."

"When does the funeral take place?"

"This afternoon. What's the best thing I can get to make tears come at the funeral?"

"An onion. Just take half an onion and keep it concealed in your handkerchief with the cut side out, so that when you hold your handkerchief to your eyes it will face them and bring the tears. I shed more tears that way at the funeral of my rich old aunt than all the rest of the family together."

"I'll do that, Bill."

A correspondent at Calico writes to the Bridgeport Chronicle Union as follows; "As you will see, I am a long way from Bodie; have been in this camp two weeks. I am pleased with the appearence of things, and judging from what I can see there is a bright future for the Calico mines. The ore is silver, and, I am told, not a trace of gold is to be found in the rock being worked; but there are some spots in certain portions of the district that contain a little gold, but the ore is too low grade to work profitably. The country is a complete puzzle to me. The formation is prophyry, and what is called quartz here, but looks like country rock to me. It is red, white, blue and green, and has every appearence of having been heaved up at some time by volcanic action, there being but few regular lodes. The ore is deposited in bunches and pockets, and reminds me much of the New Almaden quicksilver mines; but some of the ores work up into the thousands in the mill—I mean selected ores. They do not work the low grades yet. I think nothing less than $40 ores are worked by the companies having their own mills. The chloriders work nothing less than $80 or $100 ore; hence there is a vast amount of good milling ore left on the dumps, which will be worked when the rich ores are less abundant and mills more plentiful. The ore is free milling and can be worked here cheaper than in Bodie, as coal is cheaper than wood is in Bodie. I am informed that coal is worth $16 per ton. Daggett, the railroad station south six miles from the mines. It is on the Atchison and Pacific division, and teams leave daily for all parts of the country. This district needs more mills. At present there are but four mills running, and only forty-five stamps, yet the output of bullion since January 1884 has been about $1,500,000. But little is known of the depth of the ore bed, though it seems to be one vast deposit, sometimes running in small streaks, which lead to large pockets. A mine was recently sold, and the company is preparing to erect a large mill. There are at the present time about six hundred men employed in the mines, besides those who are chloriding.

The country is one vast desert, not a tree or spear of grass to be seen—not even a bird, except a few crows wandering this way and stopping a while to rest. There being no living streams, the town is supplied with water from wells, being brought in by wagons and is sold at three cents a gallon, and is very good The climate, in my judgment cannot be surpassed by any other in the State. The town of Calico is full of life; all kinds of games are running openly, as in Bodie. The town is building up very rapidly, but mostly of small houses. Rents are from $10 $100 per month. I would advise all who come here to bring their blankets and as much money as they can, as lodgings are scarse, and the climate being so mild one can sleep out of doors if necessary.

FROM General Grant at the head of victorious armies, or as the Chief Magistrate of the greatest nation on earth, or as the honored guest in courts and palaces in all the capitals of empires and kingdoms, to the same man under the shadow of adversity, enduring patiently the slow but sure approach of death from an agonizing disease, what an instance of the mutability of human greatness. Of far more value to the aged sufferer now than recollection of former greatdess and splendor is the consciousness of duty done, and the love and respect of his fellow citizens. No conquered millions groaning in bondage breathe out curses upon him as the destroyer of their liberty; but victors and vanquished join in prayers for one who bravely did his duty as a good citizen of a free Republic. The most enduring satisfaction, the most profound peace of mind, is that secured by an unwavering adherance to duty, and that satisfaction and peace should bless the closing hours of General Grant. The master motive in the characters of Lincoln, Grant and Garfield was their obedience to duty; and it is remarkable that the ending of the life of Grant should be hardly less tragic than that of the other two of this great trio. When the history of our country shall be read in future ages, what a glorious lustre shall be shed upon our own times by the names of Lincoln, Grant and Garfield.

NOTICE OF ASSESSMENT.

BISHOP CREEK DITCH COMPANY. LOCATION of Principal place of business, Bishop Creek Inyo county, California.

Notice is hereby given that at a meeting of the Board of Trustees held on the 14th day of February, 1885, an assessment of Two Dollars on the Northern Division and Fifteen Dollars on the Southern Division per share was levied upon the capital stock of the Corporation, payable immediately to the Secretary, at Bishop Creek.

Any stock on which the Assessment shall remain unpaid on the First day of April, 1885, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on the Eighteenth day of April, 1885, to pay the delinquent Assessment, together with the cost of advertising and expenses of sale.

L. A. JAMES, Sec.

36 Bishop Creek, Inyo county, Cal.

REWAR D!

I, THE UNDERSIGNED, WILL PAY, IN U. S gold coin, the sum of $150 for the arrest and conviction of any persons stealing any of my stock in California or Nevada.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, MARCH 28.....1885

—Some ore is being shipped from Crysopolis.

—Next Sunday week, April 5th, is Easter Sunday.

—Regular meeting of Lodge No. 221 F. & A. M. at their hall at Independence to-night.

—Young apricots in the orchards around Independence are about the size of pigeons eggs.

—Lewis Munzinger has started a beer depot in Candelaria. Beer will be supplied from the Bishop Creek Brewery.

—Blackleg has not yet entirely disappeared from around Bishop Creek; a few animals have recently died of the disease.

—Mr. Stansfield is accumulating ore at the Maxim mill in readiness for a start. Several carloads have already been delivered.

—Considerable rain fell in the Bishop Creek country about the beginning of the week. At Independence there were one or two light showers.

—Report says that Los Angeles and other coast counties were suffering severely from drought. Grain is expected to be a total failure.

—Gus Thede is planting trees and flowers around his hotel at Bishop Station. Inside and out the house is a perfect model of neatness; it is a gem of a hotel.

—Two old settlers of Inyo county passed away last week; Fred Uhlemeyer and Ned Hall were among the first comers, both had many friends who will deeply regret to hear of their death.

—H. A. Man is accumulating a very fine collection of ores; his cabinet now contains specimens from all over Inyo county, and gives a very fair illustration of the varied mineral resources of the county.

—An artesian well is about to be sunk at Hawthorne. If the experiment proves a success many wells will be made. The whole wide plain around Hawthorne is good land and only needs water to make it fertile.

—Deputy-Sheriff Dan Crough started out last Thursday to overhaul John Johnson, who was said to be leaving the county with intent to defraud his creditors. The last heard of Dan he had overtaken his man about Olancha.

—Boys and girls may be had—particularly boys—for service at wages, for indenture, or for legal adoption, by applying with recommendations to E. T. Dooley, Supt. Boys and Girls Aid Society, 68 Clementina St., San Francisco.

—George Stevens, of Bishop Creek, has moved into much more extensive premises. He has a very large stock of hardware, stoves and tinware. He sells axes, sledges, wedges and similar goods cheaper than they can be had by ordering at San Franciso.

—Dr. Smith, of San Bernardino, died o few days ago of blood poisoning. Several weeks since the doctor had a horse affected with distemper and in caring for the animal contracted the disease himself. Every effort was made to relieve and cure him, but without avail.

—Fred Uhlemeyer left a will devising all of his property to his nephew, W. H. Uhlemeyer, who is appointed executor, without bonds. The young man has a widowed mother and three unmarried sisters in St. Louis, and it is his intention to bring them all to his home at Big Pine.

—Last Wednesday night, or rather Thursday morning, about two o'clock, an Indian well armed and mounted galoped past Nado's place, on the Los Angeles road, in hot pursuit of two Mexicans who had stolen eight horses near Lone Pine. It was confidently expected that the Indian would save the men and get the horses. Nothing has been heard of the party since.

—An attorney at Independence has got a power of attorney in the names of about one hundred persons to make locations on the shores of Owens Lake. It is supposed that the intention of the locators is to construct vats around the lake for the evaporation of the water and securing the borax and soda it contains. These locations might easily become vested rights, and in the present condition of the law of riparian rights, might offer a complete bar to the further use of the water of Owens River for irrigation. Beyond doabt the intention of these locators is all right, and their course is legal; but it is worth note that the rights they might acquire might forever keep thousands of acres of good land in a desert condition unless, indeed, their rights were bought at their own price.

DIPTHERIA.—This disease has again made its appearance on the Comstock. The physicians think it is caused by the dry weather, and that a snow storm would drive the disease out of sight.

VANDALISM.—Some miserable blackguard removed and changed around a number of tombstones in the cemetery a few days ago. No one but the hopelessly stupid or the irreclaimably vicious would be guilty of such an act.

STOCK FOR SALE.—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 100 pounds. For particulars apply to A. K. BRIGGS,
Independence Inyo Co. Cal,

THE WORLD'S FAIR.

[SPECIAL CORRESPONDENCE.]

New Orleans, La., Mar. 18, 1885.

Since the Art Gallery was thrown open to the public, a few days ago, the entire Exposition may be considered complete. The walls of the gallery named are covered with paintings, pictures and portraits, representing great historical events, and characters with many famous landscapes, both American and foreign, some of the more noted of which will hereafter be mentioned. All our own and many foreign artists of note, have work on exhibition.

Your correspondent spent a day recently in the galleries of the Government building, and was well repaid by the views and studies observed. One entire side is occupied by the exhibits, of the colored people. Eleven Southern and nine Northern states are represented in separate sections of the exhibits, which include numberless samples and varieties of woman's fancy work, lacing, embroideries, quilting, dress wear, etc, and of such quality and beauty as to compare most favorably with like work in the department of the more fortunate white woman's work. There is also shown many samples of wood and iron work, leather work, fine crops, models of houses, and other work and products of our colored brother, which considering their opportunities, are in the highest degree creditable, for example a perfect locomotive is shown by John Allen, of Little Rock, which he constructed in his kitchen, without ever having the advantage of any previous training. There are many exhibits of school-work in this department, from various schools North and South, which in excellence are calculated to inspire the educator with renewed efforts, in behalf of the colored people, and their entire exhibits cannot but arouse an increased respect for the African race and their capabilities.

In this gallery occupying a corner in the Louisiana space for colored people's exhibits, sits a noted historical character, (locally noted), Jordan B. Noble, now in his 85th year, a native of Augusta, Georgia, slightly colored, and who was drummer boy for the seventh United States Regulars, at the battle of New Orleans; one of three now residing in this city, who were in this famous engagement. In an interview with him he told me that on the morning of the battle, Gen. Packenham, at the head of a detachment of British troops, undertook to break the American center, and was shot through the body and killed. The drummer boy, then but 13 years old, asked and obtained permission, after the battle to see the British General. He also informed your correspondent, that, contrary to history and popular tradition Gen. Jackson did not use cotton bales for breast-work in the 8th of Jan. battle but simple earth-work; a few bales of cotton were put in place but the enemy shot targets into and fired them, when their further use was abandoned. The old veteran says that just before the engagement Gen. Jackson passed along his lines and said to his soldiers—"Keep cool boys, and don't waste a shot; —"he was cool," added the old man, who exhibits a silk badge presented to him by the General when on his last visit to this city in 1838: he also shows the old drum which he carried through the war in 1812, and the Florida Indian wars.

Horticultural Hall is, by all odds, the most disappointing feature of the Exposition. Not that it is not interesting, but because of the lack of variety. In apples and oranges, the exhibits are extensive and valuable, but in plant, flower and kindred exhibits, there is but little of interest. Jamaica and Mexico make tolerably fair exhibits, of orchids and some other tropical and semi-tropical plants, otherwise the hot-house section is a failure. In oranges both California and Florida make extensive exhibits; Canada, Ohio, Nebraska, Iowa, Illinois, Wisconsin, Minnesota, Missouri, Kentucky and Kansas make very extensive exhibits of apples, and nearly everyone has carried off premiums.

As the exposition is now all open and complete, people who desire to visit it need no longer hesitate to come, as they will find abundance to occupy their attention. During the Mardi Gras carnival the city was litterly jammed with crowds, who were highly entertained by the three parades of Rex, Proteus and Momus, in which myths,, legends fairy tales and industry were illustrated and represented in many beautiful scenes mounted and drawn through the streets on "float." The Exhibition is reported to have cost about one hundred thousand dollars.

Till further, adiew
Yours B.

Mining Items,

KEYNOT MINE.

A new tunnel in the Keynot mine struck a fine body of ore lately. The more this reliable mine is prospected the better it proves to be. The Keynot has already yielded about a million dollars and is now in better condition than ever before.

PAYING ORE.

R. J. Dunlop came from Fish Springs last Thursday with a dab of bullion worth $150. The gold was obtained from three tons ore from a claim that Dick is prospecting. The ore was worked in an arastra.

A Clear Voice.

MR. Charles T. Krebs, 737 Madison avenue, Baltimore, Maryland, well known in banking circles, certifies, to the excellence of the Red Star Cough Cure. A few doses speedily cured his niece of severe hoarseness and sore throat. It is pleasent to take. No one can be poisoned by this remedy, which is free from opium, morphia and other dangerous drugs.

Personal Mention.

Mrs. J. J. Moore is at Big Pine on a visit.

Miss Addie Lewis has been visiting friends at Big Pine.

Mountain Harry came up from Darwin last Saturday.

P. A. Chalfant came down from Bishop Creek on Monday last.

Joe Harris has returned from a three weeks visit to San Francisco.

Joe Thompson was up from Lone Pine at the beginning of the week.

N. G. Fairman has gone on a business trip to Panamint. He is accompanied by Deputy-Sheriff Nealey.

Judge Hannah has been laid up with rheumatism during the past two weeks; he is barely able to get about yet.

Charley Levy steps around as briskly as defore he went to Mojave; he spent the first days of the week in Independence.

Messrs. H. M. Yerington, D. A. Bender and R. J. Laws, accompanied by their wives, were on the down train for Keeler last Monday.

Judge Arnot of Alpine county arrived at Independence last Friday. He staid but one night and went north again next morning.

Mrs. Hardy has been very ill for some days past, induced by anxiety and want of rest while taking care of one of her children that was very sick. She is now improving.

Dr. Woodin and J. R. White, of Los Angeles, passed through Independence yesterday. The gentlemen are looking around to see where good bodies of land may be obtained.

District Attorney Laird made a motion before Judge Arnot for the dismissal of the Silva case. The Judge took the motion under advisement, and said he would telegraph his decision from Alpine county.

Uncle Abe Parker left Independence last Tuesday on a trip to the East. He will go to New Orleans to see the big show, and thence to Maine and other points of the far down East. He expects to be gone several months.

W. H. Uhlemeyer arrived at Big Pine last Wednesday. Mr. Uhlemeyer is a nephew of the late Fred Uhlemeyer, and was summoned from his home in St. Louis when his uncle was seen to be dangerously ill. He is of age and competent to administer upon the estate.

Doctor Stevenson was called on Friday evening of last week to go to Darwin, to attend Ned Hall. The Doctor travelled all night, but when he arrived pneumonia had so far advanced that medical skill was powerless to arrest it. Hall died about four hours after the arrival of the Doctor.

W. Bulpit and Wils Yandell have returned from Los Angles. They sold their band of horses, but found the market dull. They bought and brought back three head of pure Jersey cattle, a heifer and two bulls; one of these is a yearling, the other is three years old. These animals are of the purest breed, and will be valuable for breeding.

G. W. Brady has got back to Independence; he says Kansas is a fine country and is settling up very fast, but the severe winters would not be endured by a Californian. He came back by the Southern route, and reports a great many people flocking into San Diego county from the east. By and by this stream will divide at Mojave, and part of it will flow up into Owens valley.

Candelaria Notes.

A correspondent at Candelaria says: "The boom craze at Candelaria has entirely subsided; all the idle men have departed and the people of the camp have got down to solid business.

Three new buildings are being erected for saloons, making ten in the town proper and four up the Gulch. Considerable other property is also changing hands.

The Mount Diable mine has about one hundred men employed and the Holmes eighty-five; both are increasing their force occasionally.

The Victor will put a force of about twenty men at work this week, and swell that number to forty as soon as places can be made for the men to extract ore, which they intend to haul to Belleville by teams for reduction. JOUR."

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

REDUCTION IN FARES.—Hereafter round trip tickets to and from Independence over the Carson & Coiorado Railroad, good for thirty days from date of issue, will be sold at Bishop and Keeler and intermediate stations to Independence and return, and also from Independence to such stations and return, at two-thirds regular rates.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.

Apply to
HARRIS & RHINE.
Independence.

DIED.

UHLEMEYER—At Big Pine, March 19, 1885, Frederick Herman Uhlemeyer, aged 56 years.

HALL—At Darwin, March 21, 1885, Edward Hall, a native of Kentucky, aged 58 years.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Franklin J. Wall, Plaintiff, against the Inyo Consolidated Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 17th day of March, A D. 1885, for the sum of five thousand five hundred and two 25-100 dollars besides costs amounting to the sum of five and 70-100 dollars, duly attested the seventeenth day of March, A. D. 1885, whereby I am commanded to make the amount of $5507.95 besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

Beginning at the south west corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true Meridian (the magnetic variation being 16 degrees east,) south 74½ degrees, west 7.73 chains to a post in rock mound on limestone croppings on the south side of Surprise Canyon; thence crossing said canyon north 15½ degrees, west, 6.47 chains to a post in rock mound near the junction of Sour Dough Canyon with Surprise Canyon; thence crossing a point of a hill and along the north side of Surprise Canyon north 74½ deg. east 7.73 chs. to the north west corner of the Surprise Valley Mill and Water Company's mill site; thence along the west boundary of said mill site south 15½ degrees east 6.47 chains to the place of beginning, containing five acres.

Also, that other parcel of land beginning a the southeast corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true meridian (the magnetic variation being 16 degrees east,) north 74½ degrees, east 7.73 chains to a post in mound of rocks on the west bank and near the junction of Powder House Canyon with Surprise Canyon; thence crossing Surprise Canyon north 15½ degrees west 6.47 chains to a post in mound of rocks on the north bank of Surprise Canyon; thence down said north bank south 74½ degrees west 7.73 chains to the northeast corner of said mill site; thence along the east boundary thereof south 15½ degrees east 6.47 chains to place of beginning containg five acres.

Also that other parcel of land beginning at a post in rocks on the south east corner of the Wyoming mill site and running thence (variation 16 degrees east,) north 74½ degrees east 7.73 chs. to a post in rock mound; thence crossing Surprise Canyon, north 15½ degrees west 6.47 chains to a post in rock mound; thence south 74½ degrees west 7.73 chains to north east corner of Wyoming mill site; thence south 15½ degrees east 6.47 chs. to place of beginning, containing five acres; being lot No. 42. Also, all the water rights, machinery, fixtures, belting, wheels, furnaces and appurtenances of every nature soever, formerly belonging to the Surprise Valley Mill and Water Company.

Also, all of that certain mine known as the Ida Mine, containing 19.37 acres, being lot No. 48 A.

Also, all that certain mine known as the Independence Mine, containing 18.69 acres, being lot No. 49 A.

Also, the Independence mill site, containing 1.03 acres, being lot No. 49 B.

Also, that certain mine known at the Eureka Mine, containing 18.31 acres, being lot No. 51 A

Also, the Eureka mill site, containing 4.65 acres, being lot No. 51 B.

Also, all that certain mill known and designated as the Surprise Valley Mill.

All of above described property being in Township 21 south, Range 45 east, Mount Diablo Base and Meridian, Panamint Mining District, Inyo county, California.

Notice is hereby given that on

MONDAY, the 13th Day of April, A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 10 o'clock a m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Inyo Con. Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, Marc 20, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-Sheriff

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNty of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3,820 09, upon which there has been paid the sum of $3293 leaving a balance of $527 09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527 09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five. W. L. HUNTER, Clerk.

(SEAL)
REDDY & CONKLIN, Attorneys for Plaintiff.

IT IS ORDERED, That notice to the creditors of W. A. Baker, deceased, be given by publication in the INYO INDEPENDENT, a newspaper printed and published in the County of Inyo, at least once a week for four weeks. Dated, February 24, 1885. JOHN A. HANNAH.
Judge of Superior Court.

ESTATE OF W. A. BAKER DECEASED. Notice is hereby given by the undersigned Executrix of the estate of William A. Baker deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Executrix, at her residence at Big Pine, in the county of Inyo.

Dated, February 24, 1885.

FANNIE F. BAKER,
Executrix of the Estate of W. A. Baker, deceased.

INDEPENDENCE, CAL.:

SATURDAY, MARCH 28 1885

Humor of the Day.

The old slipper strikes the hardest in the fall.

Mrs. Partington says that it is not true that her son Ike has ulsters in his throat.

None of our dentists have yet evinced enough enterprise to advertise "Misfit teeth a specialty."

We suppose the gaze of a cross-eyed girl might be technically spoken of as a winding stare.

In newspaper parlance the merchant who gets ahead of his fellows is the one who has the "ad" vantage.

A woman in Cleveland, Ohio, was suspended by her bustle. Business in the vicinity was also suspended.

One patriot's idea of a reform measure is a measure that holds more beer than those now in use.

It is said that the English farm laborer eats four meals a day. Probably oat meal, rye meal, Indian meal and barley meal.

"Education pays," says Colonel Allen. If education pays, there are some debtors who must be excessively ignorant.

Anser is the Latin for goose. When a girl refuses to marry you, young man, tell her you "always take no for an anser."

The reason American sopranos are not successful until they go across the ocean is that they never achieve greatness until they go to C.

The reason women as a class don't smoke is because they can't keep their mouths shut long enough to prevent a cigar from going out.

Dr. Tanner is reported to be living at a boarding house in Chicago. This is the second exhibition the doctor has given of his fasting powers.

Polar bears are said to be worth $1,000 each. The girls will have to content themselves with the sleeves of frock coats a while longer.

A New York woman ate a porous plaster instead of applying it in the usual way. Her neighbors declared she was a terribly stuck-up thing.

Workmen in California boring for oil found twelve petrified clams at a depth of two hundred and fifty feet. The rest of the court had adjourned.

Thomas Nast is going to lecture. We breathe a fervent prayer that, for the sake of Mr. Nast's family, he will draw better than he has for the last year.

A Connecticut man is dead from his bones having turned to chalk. People cannot be too careful in regulating the amount of milk they drink in this world.

A man has just died in New York who firmly believed that he was the devil. Doubtless by this time he has found out that it was a case of mistaken identity.

Boy (with feeling)—"I'm an orphan and father broke his legs and is in jail, and mother's in an insane asylum, and if I go home without any money they'll lick me."

"Have you any 'home ties?'" asked a lady of a young man whose appearance indicated dissipation. "Oh, yes (hic), home ties, lots of 'em, g-g-got a mother-in law!"

A new play now seen in New York is called "An Adamless Eden"—only females appearing on the stage. Their favorite song is probably "Over the Garden Wall."

"Pa, how funny this looks in this paper. The printer has got the words all mixed up, so there is no sense to it." "No, no, my child—that is a new poem by Tennyson."

"Pa, what is the meaning of 'in toto'?" asked a Newman girl last Sunday. "If your beau comes here to-night," replied her father, "I'll show him what 'in toto' means."

In London the percentage of deaths among married men is larger than among single men. This is as it should be. A married man in London is more willing to die than a single man.

"Winter is close at hand," remarked an exchange. How refreshing is a bit of truth like this, in the midst of a rubbish heap of old lies with the nail still sticking in them.

A St. Louis man has discovered that codfish skin, when properly tanned, makes elegant leather; it is of a pearl gray color and very tough. We thought the codfish must have been made for something else than food.

"No," said an old maid, "I don't miss a husband very much. I have trained my dog to growl every time I feed him, and I have just bought a clothing store dummy that I can scold when I feel like it."

A Burlington man, the father of three unmarried daughters, recently went to the expense of purchasing a pair of goat boots. The concussion of the paternal kick will be a caution to mashers hereafter.

Two well-known citizens were playing cards. "It's ten o'clock already. I must be getting home," said one of the revelers, glancing at the clock. "Is it ten o'clock already? How time has slid away! Yesterday at this time it was only 9:30 o'clock.

An examination of 3,726 prescriptions in a Boston drug store showed that 504 different drugs were called for by the doctors. Quinine took the lead by appearing in 292 prescriptions, morphine appeared in 172, bromide of potassium in 171, iodide of potassium in 155, and muriate of iron in 134. The whole number of articles in the pharmacopœia is 994, and Boston uses more than half of them.

A Mott street Chinaman has renounced draw-poker. He sorrowfully relates his experience as follows. "I got flo acee, bet five dolla, nobody clum in; I get tlee kingee, bet ten dolla, nobody clum in; I get flo flushee, bet fifteen dolla, evly son of gun clum in."

BRIEF AND BREEZY.

The Ingenuity of Truth and the Genius of the Liar.

BETTER TAKE OFF A FEW PRONGS.

Hank Miller is reported to have killed a dear in Long Valley, that dressed 310 pounds and had eighteen prongs on each horn. The space between the horns was two feet eleven inches.

A SWALLOW STORY HARD TO SWALLOW.

A man engaged near Hurleton lately in filling up an old mining shaft found that thousands of swallows had built their nests and made their homes in the shaft, and they flew out in great numbers as he shoveled. After working a time he went home, but returned the following morning. No sooner had he begun his work than out the swallows flew in clouds. Soon he was startled by a cold, slimy, wiggling on his back. He supposed it came from a brush near by, but on looking up beheld a cloud of birds holding snakes in their claws, which they were trying to let fall on their enemy. He gathered up his pick and shovel and fled from the place.

A GOAT ATTACKS A SEAL-SKIN SACQUE.

A Newburgh young lady, who had just purchased a new seal-skin sacque, was promenading the streets of that city Sunday airing her new garment, exciting the envy of her less fortunate female friends and the admiration of the young men, when she was suddenly attacked by a billy goat, who mistook the lady's seal-skin for some animal. By the time the William goat got through with the young lady her seal-skin was a complete wreck and she repaired at once to the police court for redress. She will sue the owner of the goat for the value of the sacque.

ROBBER RATS' INGENUITY.

A few days ago a gentleman who had noticed the signs of rats eating corn kept in a large open bin on his place, was much puzzled to account for their getting out, as, from the shape of the bin, while it was an easy matter to get in, getting out seemed impossible. The sides of the bin are very smooth and slope inward, making it out of the question for the rats to climb out. A day or two later, hearing rats in the bin, he made a slight noise and watched to see how they got out. One old rat ran from his hiding place on the outside of the bin to the top of it and lowered himself down inside until he held on by his forepaws and head. His friends, seizing his tail, climbed up by this rat ladder until the last one was out, when he drew himself out and scampered off.

NEARLY SUFFOCATED WHILE MAKING LOVE.

A short time ago a young man in our neighborhood visited his "gal" one evening, and it appears the room got rather warm during the night. They turned the key in the pipe to stop off the draft, thus preventing the escape of sulphur, which soon filled the room, and both became unconscious. The next morning the girl did not make her appearance, and being the servant the lady of the house went herself after the work, and when breakfast was ready the family concluded to go into the room where the lovers were sitting and see whether they were still there or whether they had eloped during the night. The girl at that moment came staggering out of the room and the young man was lying on the floor, both partly unconscious from sulphur. They have concluded to be more careful the next time.

AN EXCITING FOX CHASE.

Last evening, when the boys were out on a fox hunt, the dogs chased the fox through Col. Martin's yard. The Colonel, in his excitement, jumped out of bed, not waiting to don his wearing apparel, but joining in the chase, he soon gained on the dogs and took the lead. The boys, not aware of the new accession to their ranks, occasionally obtained a glimpse of a white figure, which seemed to glide with rapid strides over palmettos and through the scrub. Some declared that it was a ghost; others thought it the spirit of some departed huntsman. The mysterious individual was not recognized until the baying of the hounds, together with a strange noise which issued from the apparition, brought the boys to the scene, when, with one accord they seemed to take in the situation. There was the Colonel holding on to the tail of the fox and fighting with the dogs for the honor of being in at the finish.

STOLE A HOT STOVE.

Frank Nixon, a negro, was walking along West Thirtieth street, New York, Monday evening when he was attracted by the ruddy glow of James C. Johnson's stove in the parlor at No. 128. He entered the house and soon emerged with the heated stove, fire and all, on his back. He was captured. He said he intended to return the stove after he had warmed himself. At Jefferson Market he was discharged. Nixon once stole a showcase. He tried to steal a handcart once and carried it on his back to avoid making a noise. He also attempted to carry off a piano, and another time he ran off with a coat-rack from a hallway, leaving the coats behind.

A CAMEL'S LOVE OF TOBACCO.

Camels are great lovers of tobacco. Let any one smoke a pipe or cigar in the camel corral and the camel will follow the smoker about, place his nose close to the burning tobacco, inhale the fumes with a prolonged sniff, swallow the smoke, then throwing his head up, with mouth agape and eyes upturned, showing the bloodshot whites, will grunt a sigh of ecstacy that would make the fortune of a low comedian in a love scene.

A fond father presented his 4-year old boy with a trumpet, with which he was greatly infatuated. All day the boy tooted away delightedly, and at bed-time, when his grandmother told him to put the trumpet down and say his prayers, the little fellow said: "Oh, no; I'll tell yo what let's do, grandma; you pray and I'll keep on blowing."

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST"—Planned by HORACE GREELEY, LL.D.

All our greatest institutions of learning have adopted as THE BEST (viz: Harvard, Yale, Brown University, Cornell University, Amherst, Hamilton, Rochester, Madison University of Connecticut, etc.) Thousands of our greatest scholars have decreed it to be THE BEST. It is not only the BEST CYCLOPEDIA, but is a whole library of UNIVERSAL KNOWLEDGE from the pens of the greatest scholars on earth. 2000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. G. Sedford, Librarian of Congress, Washington, D.C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL.D.

"Cry for the best," etc.—Hon. Alexander H. Stephens, LL.D.

"The best we have," etc.,—Hon. Wendell Phillips, LL.D.

REGULAR BUSINESS ADVTS

At Contract Rates.

The Lecture Season Was Good.

"Just about the close of the war, when greenbacks were abundant and entertainments in demand where large numbers of troops were stationed, Rev. Dr. Bartlett, of the New York Avenue Presbyterian Church, Washington, who was then lecturing, received a telegram from some one at Cairo, Ill., asking his terms for a lecture. 'Five hundred dollars and expenses,' answered the Doctor, hoping to get rid of the annoyance and danger of so long a trip. 'Name your own time; terms satisfactory,' was quickly wired back. So in due season the Doctor started to fill his engagement. He was to speak on Friday evening, but owing to several accidents common in those days, he did not reach his destination till late Saturday night. He was most cordially welcomed by the Chairman of the lecture committee, whom he found to be an enterprising sutler. Apologizing for his non-appearance, he was told that Monday night would do quite as well. His host asked him if he could not preach a sermon on Sunday evening. The Doctor said he would deliver one of his lectures on the 'Glory and Shame of Language,' appropriate to the occasion. To his astonishment he found Sunday morning that he was advertised in an extra bulletin to deliver his grandest and most eloquent lecture that evening at $4 per ticket. He expostulated, but in vain. He was told that he must keep to his promise.

"Expecting to find a small audience at such a large tariff he was surprised with a crowded house, and four major generals on a front seat. It was all clear gain for the sutler, who had sold tickets ahead for the regular lecture, and used the Sunday night service to take in the army of contractors, officers, and others then thronging Cairo, who were willing to pay almost any price for an evening's entertainment.

"'They treated me like a prince,' said the Doctor, 'but I never preached Sunday night before or since where tickets of admission were paid for. The sutler got ahead of me, and came out with several hundred dollars' profit.'"

Origin of the Amulet.

A kind of odoriferous amulet, said to be made in Persia, is sold in New York bazars and is becoming very popular among New York ladies. A Turk in the trade gives this history of the origin of the amulet:

"The legend of the amulet is well known by all women in the Orient. Many years ago Genghis Khan, the great Tartar warrior, overran Persia. The Shah's harem was captured at Teheram, comprising some 300 or 400 beautiful odalisques. These became at once favorites with the hero, but his family was already so large and included so many pretty wives he could not distinguish his Persian from his Tartar wives. In order to be able to do so, he resorted to the expedient of attaching amulets, perfumed highly, around their necks, which proved quite successful. The hieroglyphics on the reverse side of the charm are supposed to represent the Khan's signature and his proclamation warning others not to interfere with his property. For hundreds of years the amulet was handed down as an heirloom and protection against evil. When the Turkish race became the conquerers of the East they captured these charms and put on the reverse side the cresent, star and the word kismet. Then after many years the Shah permitted the charms to be manufactured and sold as a boon to the human race."

Slight Reduction from Card Price.

"What is the price of this organ?" asked a gentleman of a dealer.

"Three hundred and sixty-five dollars," replied the latter.

"Phew!" exclaimed the gentleman. "Ain't that rather high?"

"Oh, no, sir; you can see for yourself, it is card rates."

"Yes, but what do you sell them for?"

"Forty-three dollars, sir."

The English minister 's coach with its big yellow wheels and heavy body reminded me of one of our mountain coaches, and it was not a great deal smaller.

The hair of a farmer near Raindo, Ohio, is reported to have turned from gray to blood red.

PAY OF MUSICIANS.

The Rate of Wages in Europe and the United States.

"I am glad to get back to this city, anyway," said a wandering musician yesterday to a *Chronicle* reporter. "This is not such a bad place, after all, in spite of all that is said about it. Yes, I have been traveling continuously for the past eighteen months, all over the United States, through England, France, Germany, Italy, Austria and even Russia, and all for bread. I left this place disgusted, and I have come back to it. Strange I should, is it not?" and the traveled musician pulled out a cigar and began to smoke.

"Then you expected to do better in Europe did you?" queried the reporter, as he drew his chair alongside.

"I did," and the man of notes heaved a sigh. "But, bless you, the life of a musician is the unhappiest one that can be found. It is miserable starvation, sir. Starvation stares you in the face when you should breakfast, lunch, dine and sup; and you know that a musician, from the nature of his work, requires more food than any other person, perhaps, except a hod carrier or a cobble stone smasher."

"But the average musician, say one of an orchestra, makes a fair livelihood, does he not?"

"Oh, fair you call it, do you? Why how much do you suppose he gets? A man who is a petty fiddler gets about $20 a week, and then there are a great many who do not get anything like that. On the continent of Europe a musician gets from five to $7 a week. That is the rate of pay in in France, Germany, Italy, Austria and Russia. In Spain there is no knowing. I have never been there; it is too poverty-stricken a land for one to dream of there earning money."

"How is it in England?"

"Better, though of course it does not begin to compare with the United States. There musicians are paid from $8 to $10 a week, and then to think of the English cannot be compared with their brother artists across the 'silver streak,' as the straits of Dover are called."

"But there is a great influx of foreigners in London seeking work as musicians, is there not?"

"I should think there was. London is overcrowded with needy Germans seeking engagements in orchestras and they are preferred to the Englishmen for two reasons—first, they are better, and, in the second place, they are cheaper. Do you know it is very queer about England that a foreigner is always preferred in that line? Why, if I had not been an English-speaking man I would have obtained work there."

"How do you find American musicians, as compared with those of Europe and England?"

"They do not compare at all. In Europe the schools are superb. Music is taught there. What finer schools for music are there in the world than those in Paris, Berlin, Leipsic and Vienna? They fill every one with enthusiasm; indeed, they did me. It seemed to me to be very peculiar to find men there who had grown gray following a calling which only paid them $7 a week. Now, mind you, those men made money on the outside by their composition and their teachings."

"Well, what do they say when they hear of American prices?"

"They hardly credit their senses of hearing or your veracity. On the continent England was looked upon for a long while as the musicians' paradise, but America is now the place to which the impecunious European violinist, cornetist, bassoonist, etc., looks for enjoyment."

"But do not you consider this place overrun?"

"Gracious, it is overrun, but there is another paradise farther ahead, which is but lately coming into prominence, and that is Australia. Musicians are paid there as well, if not better than here. Oh, yes, I have been there, too, and then the Australians are a nice easy-going set of people, and they rather prefer indifferent to good music."

"How do the leaders of orchestras get paid?"

"Very differently. But a good leader can always command a large salary. Men like DeCosta and Arditi, of course, are masters in their profession and are paid large salaries. But I know that in this country the average orchestra conductor is a well paid man."

The Lightning Cash Boy.

A white and tottering old man leaned against the five-cent counter in a toy store.

A middle-aged man streaked with gray approached him.

"Ah," said the old man extending his wrinkled hand, "it seems to me I have seen your face somewhere before."

"Are you the spruce young man who bought twenty-seven cents' worth of goods here and had three cents change coming to you?"

"I am he that was that spruce young man," replied the white old man, feebly.

"I thought so," said the middle-aged man. "Here's your change. I am the cash-boy."

"Ah, I did not expect you back so soon," and the old man hobbled out.

There is $40,000,000 of unclaimed money now in the vaults of the United States Treasury.

Bill Nye on Polar Expeditions.

Everything shows us that the summer is gone and the twilight of the year is settling down upon us. We begin to wonder whether we had better run the furnace this winter or take the money and buy Cuba, so as to have a winter resort. Speaking about winter resorts, a military friend of mine writes me that he wouldn't ask anything better than a commission to make a trip in search of the open Polar Sea. He invites me to go. I thanked him for the invitation and asked him when he wanted his men picked, before or after the trip.

While I would like well enough to catch a few pickerel in the open Polar Sea and breathe the crisp, pure air of no degrees and no minutes longitude due west of a given point, I am almost positive that I will dig the clinkers out of a large base burner this winter, and write foamy, frothy, sunny, soothful poems for a dying world.

While no one would more cheerfully enter into the giddy whirl of Esquimaux society, or load his stomach with cod-liver oil and old harnesses and saddles with vinegar, in order that he might gratify a morbid curiosity as to whether the North Pole had a hot box or not, yet I shall not avail myself of the opportunity to go this winter.

While few could more joyously contemplate a life where it would take a ninety-day note a lifetime to mature, I am free to say that I would rather, at present, climb a tall tree until the payee gets by.

Had No Cough.

A gentleman of wonderful vigor for one who has passed four score years, is stopping at Congress Hall. He is a widower and a man of large wealth. Widows as well as maidens enjoy his society, for he is witty and wise. One day he was introduced to a maiden not much past thirty. After a pleasant chat about life and living, the lady remarked, "Are you married, sir?" "Oh, no, I am susceptible, though," replied the venerable. "By the way, madame," said he, "are you married?" "I am not," she replied, "and I made up my mind I never would unless I could get a good catch—a man with brains and money." "Then," said the old gentleman, "you are after money with a husband. Well, Tilden has a barrel, I have a bushel, and brains enough to look after it. How would you like such a young man as myself?" "I like you well, sir. You are sensible, and the money is sufficient; but you lack one, just one only one, requirement, so far as I am able to judge." "Well, what is that, madam?" queried the veteran. "You do not seem to have a bad cough," she replied. The dazed veteran arose and beat a hasty retreat, while a clear, ringing voice, mingled with laughter, remarked, "Stay! Stay! Don't be in a hurry."

The Transmutation of Metals.

The Arabians, no doubt, derived their ideas of the transmutation of metals into gold, and the belief in immunity from death by the use of the philosopher's stone from China. Among all the metals with which the alchemist worked, mercury was preeminent, and this is stated to be really the philosopher's stone, of which Geber, Kalid and others spoke in the times of the early caliphs. In China it was employed excessively as a medicine. On nights when dew was falling, sufficient was collected to mix with the powder of cinnabar, and this was taken until it led to a serious disturbance of the bodily functions. In the ninth century an emperor, and in the tenth a prime minister, died from the effects of an overdose of mercury. Chinese medical books say it takes 200 years to produce cinnabar; 300 years it becomes lead; in 200 years more it becomes silver, and then by obtaining a transforming substance called "vapor of harmony," it becomes gold. This doctrine of the transformation of mercury into other metals is 2,000 years old in China.

Took It for a War Map.

"Now, here," said McGargle to his wife, "is Khartoum."

"Yes," acquiesced Mrs. McGargle demurely.

"And here, at this point of the dotted line, is where Gen. Wolsley will disembark his troops for the expedition that is to relieve Gen. Gordon."

"Precisely."

"Then they will move up this dark line which is the Nile—"

"But that's not the Nile," interrupted McGargle's better half.

"It isn't?" he inquired, glaringly.

"Not much. That's the bias."

"The bias!"

"Why, yes, you lunatic. Don't you know that's my diagram pattern for little Johnny's fall suit?"

"Thunderation! I took it for a war map. I had a war map—supplement form—not five minutes ago. Some folks think they are awful smart," and with his last withering sneer McGargle lounged out after an evening newspaper containing another diagram of the latest millionaire-coach man imbroglio.

Colonel Elliot, who is the Texas commissioner at the New Orleans exposition, has got himself into very serious trouble. A Dallas youth, who imagines that he is an artist, brought him a beautiful landscape he had painted, and told him he wanted it exhibited at New Orleans. "Certainly, sir; certainly," replied Colonel Elliot.,, But I want a card put on it stating that it is not for sale." "I don't think that there is the slightest necessity for that," remarked Commissioner Elliot, taking another glance at the work of art.

Holy Tattooing.

The custom of tattooing the body formerly existed in all parts of Polynesia, but is now generally abandoned, except among the ruder islanders. The process was substantially as follows: The artist first drew the desired pattern upon the body of his subject; then taking a fine-toothed comb, made of shell or bone, he dipped it into a liquid composed of the pulverized coal of the candle-nut and oil, and placing it on the spot caused it to puncture the skin by a blow with a mallet. Soon a bluish color appeared under the skin, which did not fade for many years. The first marks were made about the time of puberty, but so painful, and even dangerous was the process that it was not finished at once, but the pattern was elaborated year by year up to advanced age. The designs were mostly arrangements of curved lines, showing great artistic skill and appearing to the eye like a drapery of fine lace work. Often figures of men, birds, dogs, fishes or other objects were pictured. The extent of the person covered by tattoo varied on different groups, but the thighs were invariably marked. High chiefs were exempt from the custom, as were the lowest class of freemen, slaves, and to a great extent women. Various theories have been proposed to account for the practice, but the only satisfactory one finds its ground in religion. The figures of living objects, so common are the totems of the individual or tribe in which guardian spirits are believed to reside. The operator is always a priest, and the patient is tabu, "holy," during the process. The primitive idea seems to have been that by drawing the visible emblem of a deity upon the person his favor was thereby secured. Later, this conception faded out, and the custom came to be simply a mode of ornamentation or mark of social distinction. The chiefs were not tattooed because themselves partaking of the divine nature, they did not require it, and the rest were exempt because they did not deserve it.

A poor old tattered, scarred, pan hobbled into an undertakers and leaning its crutch against a coffin warmed its hands at the fire. "What do you want?" demanded the undertaker. "Sir," replied the poor pun humbly, "I have been dead and buried many a year, but have fallen into the hands of resurrectionists and here I am. I have heard that a new funny paper is to be started and called in to ask for some kind of hermetically sealed grave for my ashes. I have concluded that cremation is my only hope."

The apple is the king of all fruits. A choice apple of high quality, when exactly properly ripened, has no superior among the things that grow on trees, and what the kitchen has done for civilization baking does for the apple. It is refined in the oven and brought out still higher than the richest of its uncooked fellows. But, while the raw apple is fine and the cooked apple is finer, there is a feeling that both are inferior to cider itself. They are hampered by the meat of the fruit—the limitation of the flesh—but the cider is the very essence of it, and in time develops the pure spirit.

Carlyle and the Another Pianist.

"The miserable young woman in the next house to me spends all her young bright days, not in teaching to darn stockings, sew shirts, bake pastry, or any art, mystery or business that will point herself or others, but sits in a musing heroine or sits prone on the grass plot with laughter or the fates, but simply goodly musing from dawn to dusk, from night to midnight, on a hapless piano, which is seldom she will accuse in the end to be more musical than a jar of barn clangers. The miserable vo[illegible]

Consoling the 'Squire.

'Squire Patterson, wearing an air of deep concern, approached his friend, Farmer Glover, and without speaking, leaned on the fence and sighed.

"What's the matter, 'Squire."

"I don't know what this country is comin' to. What would you think if your daughter should run away and marry an ignorant hired man?"

"Oh, I don't know, 'Squire, but I would not take it to heart if I were you. I would try to think that it happened for the best."

"Would you forgive the girl?" asked the 'Squire.

"Yes, I believe I would. There's no use holding out, you know. When did it happen?"

"Just a while ago."

"Who performed the ceremony?"

"I did."

"What! Then you could not have been opposed to the marriage."

"Oh, it makes no difference to me," replied the 'Squire, for, you see, it's your daughter instead of mine.

A Bad Combination.

"There," exclaimed Mrs. Talkmuch, "that's the kind of brutes you men are," and she read an account of a wife murder by a Georgia barber recently.

"You say he was a barber, my dears"

"Yes, he was, and—"

"Oh, well, it is all for the best. A barber and a woman can't live happily together, anyway."

"I'd like to know why not. I an't sure——"

"Too much competition, my dear. Neither of 'em could get a word in edgewise."

Growth of the United States.

The following statistics show the growth of the country since the year 1860.

Twenty-three years ago we were 30,000,000 of people; now we are over 50,000,000.

Then we had 141 cities and towns of over 8,000 inhabitants; now we have 286 of such cities and towns. Then the total population of our cities was 5,000,000; now it is about 12,000,000.

Our coal mines then produced 14,000,000 tons a year, now 35,000,000 tons a year, or six times as much.

The iron product amounted to 900,000 tons of car; to-day it foots up over 8,000,000 tons a year, almost a nine-fold increase.

In 1860 our metal industries employed about 53,000 hands, consumed about $100,000,000 worth of material and turned out about $189,000,000 in annual products.

To-day these same industries employ 300,000 hands, consume $530,000,000 of material, and their annual product amounts to $560,000,000 a year.

In 1860 the wood industries employed 130,000 persons; to-day they employ 340,000, while the value of their annual product has trebled.

The woolen industry employed 60,000 persons then, and now employs 160,000, while our home mills, which produced goods of the value of $80,000,000 in 1860, now turn out an annual product worth $270,000,000.

Finally, there is cotton. In 1860 we imported 227,000,000 yards of cotton goods; in 1881 we only imported 25,000,000 yards.

In the meantime the number of hands employed in American cotton mills has increased to 200,000, and we export over 150,000,000 yards of cotton goods a year, instead of importing 227,000,000 yards, as we used to do.

The silk industry employed 5,000 persons; now it employs about 35,000, seven times as many.

We import no more silk goods now than we did in 1860, but our own mills, which produced goods of the value of $60,000,000 then, now turn out a product of over $40,000,000 yearly.

In 1860, 12,000 persons were employed in American pottery and stoneware works; to-day about 50,000 are employed in this industry.

The chemical industry, which employed 6,000 persons then, now employs 30,000.

In the meantime we have nearly five times as many miles of railways and double the number of farms, and yielding more than double the number of bushels of cereals.

In the production of sheep, we had 22,000,000 of them in 1860, to-day we have over 40,000,000 of them; and whereas we then produced in this country 60,000,000 pounds of wool, now we produce 240,000,000 pounds.

Finally, the total of our exports has doubled.

In 1860 it stood at $400,000,000 and now it stands at about $800,000,000.—*Boston Traveler.*

SOME CURIOUS FACTS.

There died recently in Savry a knife grinder who for years had followed his trade in Geneva, and left a fortune of 100,000 francs, all of which he bequeathed for division between three poor parishes, which should use it to buy clothing for children in need.

Another industry is now open to women. In an establishment on Center Street, New York, they are employed as gold beaters. The proprietor asserts that, while not equal to men in physical strength, they are superior in carefulness and delicacy of workmanship.

In opium joints and hasheesh houses, says the New York *Sun*, tea or water adulterated with aconite is used to heighten the effect of the drug upon the nerves and brain. This is almost the same excitant that was used by the New England witches, according to Professor Schele de Vere.

In Massachusetts women and children are driving men out of many industries. The trades in which the former are a very large majority are awnings and tents, buttons, dress trimmings, carpetings, clothing, cotton goods, woolens, fancy goods, flax and linen, hair work, hose, rubber, mixed textiles, paper, silks, sporting goods, straw goods and worsteds, twenty in all. Sixty trades show a preponderance of men.

Golden Rules.

The person who first sent these rules to be printed says truly, if any boy or girl thinks it would be hard work to keep so many of them in mind all the time, just think, also, what a happy place it would make of home if you only could:—

1. Shut every door after you, and without slamming it.

2. Never shout, jump or run in the house.

3. Never call to persons up-stairs or in the next room; if you wish to speak to them, go quietly where they are.

4. Always speak kindly and politely to servants, if you would have them do the same to you.

5. When you are told to do or not to do a thing by either parents, never ask why you should not do it.

6. Tell of your own faults and misdoings, and not those of your brothers and sisters.

7. Carefully clean the mud or snow off your boots before entering the house.

8. Be prompt at every meal hour.

9. Never sit down at the table or in the parlor with dirty hands or tumbled hair.

10. Never interrupt any conversation, but wait patiently your turn to speak.

11. Never reserve your good manners for company, but be equally polite at home and abroad.

12. Let your first, last and best friend be your mother.

These rules will make you a desirable co[illegible]—*Selected.*

TRAVELING.

Railroad Time Table.

CARSON & COLORADO R. R.

....TAKING EFFECT....

Thursday, Dec. 4, 1884.

STATIONS.	From Mound House No. 1. Leave—	To Mound House No. 2. Arrives—
Mound House	9:15a.m.	6:00 p.m.
Paxton	9:35 a.m.	5:25 p.m.
Wabuska	12:05 p.m.	3:10 p.m.
Hawthorne	3:30 p.m.	11:30 a.m.
Luning	5:15 p.m.	10:05 a.m.
Sodaspringes	6:20 p.m.	9:20 a.m.
Belleville	7:40 p.m.	8:00 a.m.

Belleville	7:30 a.m.	6:20 p.m.
Benton	11:15 a.m.	2:35 p.m.
Basin Creek	1:10 p.m.	12:10 p.m.
Avoca	2:20 p.m.	11:20 a.m.
Independence	4:10 p.m.	9:20 a.m.
Lone Pine	5:10 p.m.	8:40 a.m.
Keeler	5:40 p.m.	8:00 a.m.

Trains 1 and 2 run daily.
Train 3 runs Mondays Wednesdays and Fridays
Train 4 runs Tuesdays Thursdays and Saturdays

Passenger trains make close connection at Mound House with express trains of V. & T. R. R., which connect at Reno with eastbound trains of Central Pacific Railroad.

Stage Connections:

At HAWTHORNE with United States Stage Company's coaches for Aurora (26 miles); Bodie (35 miles); Bandy and Bridgeport.

At LUNING (125 miles from Mound House) with Gilmer, Salisbury & Co.'s tri weekly stages (leaving Mondays, Wednesdays and Fridays) for Downieville, Santsville and Belmont.

At CANDELARIA with U. S. Stage Co.'s stages for Columbus (8 miles), Silver Peak, Montezuma, Alida Valley, Gold Mountain etc.

SATURDAY, APRIL 4 ..... 1885.

C. Mulholland,
EDITOR & PRORPIETOR.

SIMEON Strong, who killed his wife in Reno some weeks ago, has been sentenced to death.

A narraw guage railroad is to be built from Calico to Daggett. A company has been incorporated.

FOR the murder of R. H. Scott, in Humbolt county, Nevada, Clarence Gray has been sentenced to be hanged at Winnemucca.

THE Los Angeles *Express* says that robbery on the streets of that city is a daily occurrence. Has Los Angeles no police force?

FROM and after July first the postage on letters weighing one ounce or under will be two cents. At present extra postage must be paid on all letters over half an ounce in weight.

THE prospect of war between England and Russia is causing great demand for American canned goods. Chicago merchants have received immense orders for provisions from England,

THE prospect of war with Russia appears to be hailed with delight in England, and eager thousands are ready to become soldiers. These thousands are starving; while in the army they would get something to eat, and for that they are willing to take the chance of being shot. Some day despair will drive these people to turn their wrath upon their rulers, and then the scenes of the French revolution will be repeated.

THE refusal of Controller Dunn to draw has warrant for the payment of the Slickens Claims is deserving of high praise. The passage of the bill for the appropriation of the money was a bare- faced attempt to override a decission of the Supramo Court, declaring the original Slickens bill unconstitutional. That act being declared null, everything done under its provisons must be illegal and void. Bill Parks may be headed off yet.

ALL the Royal families of Europe are related to each other. From the present aspect of affairs it would appear that these relationships among Royalty lead only to quarreling, instead of promoting peace and unity. Our own Republic is saved from the miseries of frequent wars, brought about by the mutual jealousies and hatreds that continually agitate rival Emperors, Kings and Queens. It is as true now as of old, "when the wicked rule the people mourn.

WRITING of the future uses to which electricity is sure to be applied, Edison says; "The vast deposits of rebellious ores, which for the want of an economical method of working are to-day practically useless, will probably at some date not far hence yield to man the precious metal they contain by assistance of electricity. Though the experiments have not been very successful, enough has been done to show that there will be eventual success."

THE United States Commissioners for the different States, in conjunction with the management of the Exposition at New Orleans, have designated different days to be kept and celebrated as the special State days of the several States. May seventh has been designated by official action for the reception of representatives of the Government, and for the inhabitants *en masse* of the State of California. Most interesting ceremonies will take place, and an enjoyable occasion is assured. To enable Californians to attend on their Special State Day, the railroads have agreed to make the lowest rate ever heretofore given.

ONE law made at the last session of the Legislature is deserving of particular attention, its provisions ought to be well and generally understood, as any violation of the same, though done in ignorance of the law, would involve a serious penalty. The law in question is in relation to fruit pests, and one provision of the act is as follows. Section 5. "All fruit trees infested by any insect, their germs, larvae or pupae or infected by diseases known to be injurious to fruit and fruit trees, and liable to spread contagion, must be cleaned or disinfected before the first day of April, eighteen-hundred and eighty-five, and on or before the first day of April, of every succeeding year hereafter. All owners or occupants of land on which fruit trees are grown, failing to comply with the provisions of this section, shall be guilty of a misdemeanor, and find as provided for in Section 6 of this Act." It will be seen that if complaint is made of neglect of the requirements of the above section, the owner or occupier of land on which fruit trees are grown is liable to a fine. The lightest fine that would be inflicted for a violation of the law, would cover the expense of complying with its provisions.

NOT long since the Canadians were eagerly welcoming Chinese, they have already discovered that it is possible to have too much of a good thing. A bill has been passed in the Canadian Parliament which places a poll tax on all Chinese women and laborers.

THE failure at the last session of the Legislature to pass irrigation bills, was due to the adverse influence of the northern counties. The possibility of the continuance on the part of those counties, to the passage of such bills in the future, has given a fresh stimulus to a demand for a division of the State. California is big enough to make two big states, and Los Angeles would make a delightful state capital. The northern and southern parts of the state are in many respects very unlike, and the separate interests of each could be better provided for if a division were made.

THE bill passed at the recent session of the Legislature, affecting the salaries of county officers contains the following clause, Sec. 4 of Sec. 210. The salaries herein provided for the tenth, thirty fifth, and forty sixth classes shall take effect and be in force from and after the first month next succeeding its passage.

The three classes excepted include the three counties of Solono, Mono, and Inyo. In the case of Solono the exception permits the Sheriff to employ a jailor, to be paid by the county, at a salary of six hundred dollars a year. The change is therefore a virtual increase of the salary of the Sheriff of that county.

In Mono and Inyo counties the gross deductions from the salaries of county officers during the present year, would amount to seven thousand, six hundred and fifty dollars, and for their whole term of office, seventeen thousand eight hundred and fifty dollars.

It would appear that an idea was very prevalent that the salary of no county officer could be changed during the term for which he had been elected. Section 9, of Article 11 of the Constitution provides as follows;—The compensation of any county, city, town or municipal officer shall not be increased after his election or during his term of office.

It will be seen that the constitution only prohibits increase of salary, but does not mention decrease. If a test shall be made of the new law and if it shall be held constitutional by the Supreme Court, the result will be a bitter disappointment to the present officers. When the last election was held no one had any idea that any change in salaries would be made during the ensuing two years; the officers elected no doubt made certain business calculations on salaries as the law then stood, and this radical change cannot fail to work them hardships, however much relief it may afford the tax payers. The County Clerk will be the heaviest loser by the change; during the remainder of his term of office it will make a difference to him of five thousand nine hundred and fifty dollars. By the law as it stood the salary of Sheriff was fixed at seven thousand dollars a year: by the new law it is reduced to five thousand dollars a year. The difference to the Sheriff during his whole term of office will be three thousand five hundred dollars.

What is a Mahdi?

Mahdi, or Mahadi, as D'Herbelot spells it, is an ancient title in the Moslem world which at first signified simply director of the faithful. But in the course of Moslem history, and especially Moslem history in Africa, it came to have another signification related to an accepted prophecy of Mohammed. It necessarily refers to the African part of Arabic history. By this secondary significance of the word the Mahadi is a certain ancient leader come again. His appearance is the "second advent" of a prophet who lived in the old days, and who, in all the meantime, has been with the immortals. Mohammed, the twelfth Imam, and the twelfth in descent from Ali, is the real original. He is the Mahadi who comes again every now and then. He was hidden from the world at an early age and communed only with his disciples through his lifetime, and finally did not die, but "went up," with the fixed intention of returning to revive the glories of Moslem. As in the christian theory and even in the history of several monarchies this legend of a prince who is to return has afforded a favorite pretext for no end of impostors, so it did in Islam. The most famous of these in past ages was Abulcassem Mohammed Ben Abdallah, the founder of the Fatimite dynasty in Africa. Mohammed had prophesied that in 300 years the sun would rise in the west, and as Abulcassem's glory was in 296 of the Hegira, it was held that the prophecy referred to him, and since then the idea of the Mahadi has commonly had relation to a revival of the glories of Islam in that western world of Moslemism, the provinces of Africa held by the Arabs.

Startling revelations have been made regarding the British war establishment. When the troops were inspected recently many thousand men were found to exist merely on paper. Regiments which were reported at their full complement proved to be mere skeletons, and cooks, servants, and camp-followers were hastily crowded into the ranks to satisfy the inspectors.

Scientific Miscellany.

The photograph of a tailed boy from Saigon was lately shown to the London Anthropological Society. His age is about eight years, and the appendage 6 or 8 inches long.

Under the influence of galvanic action milk has been kept sweet three weeks in summer, and it is suggested that beer and other liquids may be preserved in a similar manner.

To assist in determining whether any slow changes in terrestrial latitudes are taking place, a series of observations covering a period of several years is to be made at Washington and elsewhere.

A pressure of forty to 120 atmospheres, exerted during a period of fifteen years, has been found by Quincke to be incapable of forcing a perceptible quantity of carbonic acid or hydrogen gas through a glass wall one-sixteenth of an inch thick.

The attention of the Russian government has just been drawn to the existence of extensive deposits of sulphur in western Siberia, and an expedition is to be sent to examine them. Europe's supply of sulphur is now chiefly obtained from Sicily.

Several agricultural chemists of Germany have been studying to improve heavy soils, and now recommend lime as a dressing. The crop for the first season should be potatoes; for the second, oats; for the third, tares, or peas; and for the fourth, potatoes again.

A collection of skulls from the southern hemisphere has been studied in England, the most notable conclusion reached being that some of the races of south Africa, Australia and the southernmost part of South America are remarkable for the smallness of their heads.

Earthquake observations are to be instituted on the summit of the Ben Nevis, where is located the highest meteorological observatory in the British Isles. The isolated position of this station renders it particularly suited to observations of slight tremors.

A disease called the potato-scab has been described by Prof. E. Heiden, who finds it to be occasioned by a parasite fungus, Rhizoktonia solani, and not due, as is commonly supposed, to the action of caustic lime upon the surface of the tubers. The disease is severest in fields dressed with farm-yard manure.

The treeless condition of parts of the South American pampas—of the La Plata region, at least—is attributed by Mr. Arthur Nicols to the work of an omnipresent ant, which feeds upon leaves and quickly destroys tree-seedlings and other tender plants as soon as the leaves appear above ground. Indian corn grows freely on these plains, its growth being so rapid that the insects do not succeed in completely devouring the young plants.

Nature's Invisible Workers.—Microscopic organisms not only destroy the plant and animal forms familiar to us, but they appear also to build up such forms, and to be necessary to their very existence. A French biologist, Mons. Duclaux, has just made some experiments which tend to prove that plants will not germinate unless microbes exist in the soil; and Pasteur had already been led to the conclusion that microbes are essential to animal life, as digestion cannot be performed unless they are present.

Storm Statistics.—In a recent official publication, the chief signal officer has given a summarized account of 2,739 of the storms which occurred from January, 1876, to August, 1881, in a region embracing a large part of North America, the Atlantic and Europe. Of these 413 began and ended in America; 589 began in America and egded in the Atlantic; 190 began in America and crossed the Atlantic; 326 began and ended in the Atlantic; 555 began in the Atlantic and ended in Europe; 491 began and ended in Europe; and 65 began in America and crossed the Atlantic and Europe.

Bird Migration to Cuba.—Statistics collected by the American Ornithologists' Union show that great numbers of birds are destroyed by flying against the light-houses of Cuba. At Paredon Grande, more than 100 birds were found one morning; in one night last October 278 were killed by flying against the light-house at Cardenas; and at the San Antonio light-house more than 500 are sometimes picked up after a single night's destruction. Thus is confirmed the view expressed by Prof. Spencer F. Baird, twenty years ago, that every autumn a great bird wave sweeps over from Florida to Cuba.

Influence of House Plants.—Dr. J. M. Anders has reached the conclusions that only flowering plants, grown in well lighted places, generate ozone; and that the most odorous flowers produce the greatest quantity. The ozone attacks the organic matter of the air and by oxidation renders it inert; and Dr. Anders does not doubt that flowering plants in clear weather give off enough of this natural purifying agent to be of hygienic value in doors. Foliage plants, although yielding no ozone, may be of advantage in contributing to the maintenance of a healthful degree of humidity in the atmosphere of rooms.

Smoking Again Investigated.—By a long series of experiments, a Russian physician, Dr. Zulinski, has proven that tobacco-smoke is a distinct poison, although its action upon men is very slight unless inhaled in considerable quantities. He has found that the poisonous property is not exclusively due to the nicotine, for tobacco smoke contains a second toxical principle called colodine, as well as carbonic oxide and hydrocyanic acid. The effects depend largely upon the nature of the tobacco and the manner of smoking it. The most poison is derived from the smoking of cigars, less from cigarettes, still less from pipes, and least of all from the use of nargiles or any other apparatus in which the smoke is passed through water. Tobacco which has been artificially lightened in color is, in Dr. Zulanski's opinion, more dangerous than the darker kinds.

A Connecticut youth of 22 has just married a widow of 73. He evidently wanted a wife who knew how to cook.

What is One's Social Duty?

Often we hear one friend ask this question of another. Is one's social duty done by accepting and giving invitations? What do we bind ourselves to in accepting the hospitality of a friend or acquaintance? Is our duty by her done when we have entered the portal of our hostess and have given her greeting? Do we owe anything to her guests? If we are a man, do we do our duty when we neglect speaking to the ladies whom we know? If we see a chance when we can be of service to our hostess in making things pleasant and agreeable for her, is not that our duty to be ready and happy to do her bidding or even to anticipate it? If we are a woman our power to do more than to make ourselves as agreeable as we may is limited. We can then only be kind, generous and considerate of other women as it comes in our way. We cannot seek the opportunities of being polite and making the happiness of those about us as men can. Selfishness, alas that we see so much of it where there is the least excuse for it.

Why is a burglar like a dog that tries to catch its tail? Because he goes around after his swag.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, APRIL 4 1885

—To-morrow will be Easter Sunday.

—Gorman & McKenzie will start up the furnace at Darwin to-morrow or next day.

—Jake Miller thinks some bottles hold more than others. He came to this conclusion last Wednesday.

—At the Pioneer Brewery a bouncing brewer made his appearance last week. Joe is immensely pleased with the young stranger.

—Some one please tell Henry Levy where he can find a square circle. He hunted all over town for one last Wednesday and didn't find it.

—Influenza is prevalent among children in the Valley. Dr. Blair was called to Big Pine at the beginning of the week to attend several little ones.

—Last Tuesday there was a slight rain at Independence. At night the lightning was seen flashing along the Inyo Mountains for several hours, but no thunder was heard.

—Alexander, Kehoe and Barnes have got out quite a lot of ore, but will not ship any more until about the first of May. The reason for delay is that Selby & Co. will not have their new works ready sooner.

—Miss Eva Shepherd is teaching a private school at Lone Pine. When the regular term ended, the patrons of the school determined to make sure of the continued service of Miss Shepherd and at once made provision for continuing the school.

—Around Independence the present prospect for a heavy fruit crop is excellent. The young apricots are rapidly increasing in size; on many peach trees the fruit is well "set" and very abundant; apple, pear and cherry trees present the appearance of enormous boquets of lovely flowers.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

CAN BE SPARED.—A number of Chinamen left Independence last Tuesday day for Signal, Arizona. Letters from their countrymen at that place encouraged them to expect bigger pay than they could get in Inyo county.

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to
A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

REDUCTION IN FARES.—Hereafter round-trip tickets to and from Independence over the Carson & Colorado Railroad, good for thirty days from date of issue, will be sold at Bishop and Keeler and intermediate stations to Independence and return, and also from Independence to such stations and return, at two-thirds regular rates.

NO MORE IRRIGATION.—The Natoma water and Mining Company, cultivating 2,600 acres of vineyard in the foothills of Sacramenty county has abandoned the use of irrigation for wine grapes. The Company has plenty of water at all times, but experience has convinced the management that the best wine is made from grapes not irrigated, and that the vine thrives without irrigation.

DRUNKEN INDIANS.—The train men on the C. & C. railroad had a tussle with some Indians a few days ago. When the south bound train was pulling into the depot at Kinkead the brakeman found three or four drunken Pintes hanging to the brake of a box car, and they were so persistent that the train had reached nearly to the station before they could be got out of his way. The Indians showed, fight but the train men pitched into them with sticks of fire wood and knocked them off the train. None were seriously hurt.

SEVERE ACCIDENT.—George Campbell, of Dayton, ex-mail clerk on the Colorado and Carson Railroad, undertook to board the locomotive of the incoming train from the south on that road, at Dayton, Sunday evening. He missed his hold or his footing and fell with his right foot almost under a wheel of the locomotive. Two of his toes were pinched off, and it was fortunate he did not loose his whole foot. He has no one to blame but himself.—*Enterprise.*

PLAGUE COMING.—It is reported that there is *less* snow on the western slope of the Sierras than at the corresponding season during any of the past thirty years. Great scarcity of feed and water for stock is expected. This may cause another visitation along the eastern slope of the mountains of the forest destroying and impudent trespassing sheep vandals. The marauders should not be suffered to come like locusts and destroy our summer ranges in counties where they never pay a cent of taxes.

A JUBILEE AT BELLEVILLE.—There was a general demonstration at Belleville on Wednesday over the raising of the wages of the men employed in the mills. The old standard of rates has been re-established and brought out a universal manifestation of joy amid the blazing of bonfires and a salute of one hundred guns. The upper mill will start on full time on the first of next month, and everything points to a still greater era of prosperity in not only that but this region. The restoration of the old rate of wages in the mills will also silence the hint of a reduction in that of the mines, and all is due to the presence of Alvinza Hayward, one of the principal owners in the Holmes company.—*True Fissure.*

Resolutions of Sympathy.

At the last regular meeting of Inyo Lodge No. 221, F. & A. M., the following resolutions were unanimously adopted:

"To the Worshipful Master, Wardens and Brethren of Inyo Lodge, No. 221, F. & A. M.

"Your special committee to whom was referred the drafting of resolutions of sympathy, beg leave to report the following:

"Whereas, We, the Brethren of Inyo Lodge, No. 221, F. & A. M., have learned with deep and heartfelt sorrow of the bereavement of our esteemed brother. Henry M. Isaacs, by the loss of his beloved wife, Amelia Isaacs: Therefore, be it

"Resolved, That we extend to our brother the condolence of our Lodge, and sympathize with him and his now motherless little ones, in their great affliction, and we sincerely trust and hope, that in the heavy hand that has been laid upon them, they may gather a harvest of wisdom, and look upon and find in the chastening rod, a blessing and a deep seated and well founded hope that it was all for the best.

"It was here, within the sacred portals of our Lodge room, that the twain were made one, and the solemn vows were plighted that have been severed by death.

"We knew Mrs. Isaacs well, and like all those who knew her, we admired her for her beauty, her grace, her accomplishments and her many amiable qualities of heart and mind. She was a fond and devoted wife and an affectionate mother. May her many friends cherish her virtues and her memory, and her life be one continuing lesson to the grief-stricken husband, and a beacon star unto the little footsteps she has left behind, which may guide them in their walk through life, and guard them from all evil.

"Respectfully submitted,
A. R. CONKLIN, }
A. N. BELL, } Com."

Wholesale Locating.

Almost, if not quite, the whole shore of Owens Lake has been located. The power of attorney for making these locations was granted to L. F. J. Wrinkle, of Virginia City, and bears the names of eight hundred and thirty-nine locators. The fees for recording the locations amount to $225.50. That much, at least, is assured to the county for the present. If the only object of making these locations were to make evaporating tanks for getting the matter held in solution in the water of the lake then a mile or two of the lake shore would afford ample room for the most extensive operations that could be well conducted. By locating the entire circumference of the lake it might appear that the locators expect the entire lake to dry up, and they want to secure all the enormous quantity of matter that would be left in its bed. Before the bed of the lake could become dry Owens river would have to be diverted from its present course and the water be disposed of in some other way. This implies irrigation on a scale of such magnitude as is hardly likely to be undertaken soon. In any event, if these locations will develop any new industries in the county, and promote the utilization of any of the natural resources, the county will be gainer thereby, and the locators or promoters, no matter who these may be should have the good wishes of the citizens of the county, and general countenance and support in their work.

Recorded Transfers.

Since last report the following have become matters of record:

John S. McGee, Sheriff, to Isaac Harris, property of Argus range Mining Co. Consideration, sold for delinquent tax

John S. McGee, Sheriff, to Isaac Harris, Riley mill; consideration, delinquent tax.

Frederick A. Hyde and J. M. Keeler to Owens Lake Milling and Mining Co. land upon which Hawley mill stands; consideration, $500.

Margaret Reddy to Margaret Killday, town lot and improvements in Lone Pine; consideration, $300.

Margaret Reddy to Anna M. Mates, lot and improvements in Lone Pine; consideration, $150.

Thomas Clark and Julia A. Clark to A. K. Briggs, quarter section of land near Bishop Creek; consideration, $50.

John S. McGee, Sheriff, to H. M. Yerington, the Rowan Raneh, near Bishop Creek; consideration, $1,524.73.

Cartier and others to John H. Gay, Victoria mine, Union District; consideration, $450.

Peter Foisy to Philip Cartier and John H. Gay, Florida mine, Union District; consideration, $5.

Minerva Powers to Bishop Creek Ditch Company, right of way for ditch; consideration, $350.

Splendid Honors.

The public should note the fact that the only proprietary medicine on earth that ever received the supreme award of Gold medal at the great International World Fairs, Industrial Expositions and State Fairs, is St. Jacobs Oil. After the most thorough and practical tests, in hospitals and elsewhere, it has universally triumphed over all competitors, and been proclaimed by Judges and Jurors, including eminent physicians, to be the best pain-curing remedy in existence.

KERN.—Last week there was a heavy fall of rain in Kern county. The *Gazette* says: "Reports from different parts of the county are to the effect that good rains have visited nearly, if not all localities, and those who depending on rains for early crops, feel that they will be successful.

Personal Mention.

Mr. Fairman got back from Panamint last Tuesday.

Isaac Harris is cleaning up the pans at the Riley mill.

Mr. Bolinger was down from Crysopolis last Wednesday.

Mrs. Johnson, of Lone Pine, was at Independence last Sunday.

Hi. Hamilton went to Lookout a few days ago, to work for Frank Fitzgerald.

Mrs. J. S. McGee is making a visit of several weeks duration at Bishop Creek.

Mrs. A. K. Briggs, of Bishop Creek, was in Independence at the beginning of the week.

Miss Minnie Lasky and Miss Ida Adams were up from Lone Pine at the first of the week.

Dick Eldred and Dan Crough have begun work to open a new ledge at the White Hill mine.

Paul Houard came up from Lone Pine last Saturday evening, to mingle with the sons of light.

Jack Wheatly, an old time Nevada miner, died at Daggett, March 18th. He was a native of Ireland, and aged about 50 years.

A. C. Tinner, a former resident of Benton, was fatally injured by a blast in a mine in Mexico on the last day of February. He was aged about thirty-four years, and a native of Cumberland, England.

Keeping Secret.

During the past few days there has been talk that the provisions in the amended County Governments bill, affecting the salaries of the present officers of Inyo and Mono counties, was kept a profound secret from those officers till after the bill had become a law, and that a few persons in Inyo county had knowledge of lhe fact that such reduction of salaries was intended, but would not inform the officers of the fact.

Such talk is mere stupid balderdash. The first bill on the subject introduced by Mr. Van Voorhies, on January 29th contained this clause:—Sec. 3 of Sec. 210 "This Act shall take effect and be in force on and after the first day of the first month next succeeding its passage.

The intent of this clause is very plain and every officer in the state could see for himself just what it meant. The only change made in this clause, in the bill that finally became law, was to confine its operation to the counties of Solano, Mono and Inyo.

The simple fact is, that through inattentive reading, the clause of the bill making it take effect on the first day of April was generally overlooked and when at length the meaning of the same was discovered, it was as much a surprise to others as to the officers themselves.

The present county officers knew that a bill for the reduction of salaries would be introduced in the Legislature in fact each one of them had signed a petition praying for such reduction. Each officer knew that by asking the Senator or Assemblymen from the district, he could have a copy of each bill affecting salaries introduced in either House. Where the interests were so direct, and the means for keeping fully informed so easy, it is the sheerest nonsense to talk about the matter being kept secret.

What The Sexton Said.

Mr. Lewis Edwards, Sexton of Mt. Vernon Place Church, Washington, D. C. certifies that for several months past he had been suffering with a severe cough which distressed him day and night. He was very much debilitated with constant pains in his chest. After trying various remedies he used the Red Star Cough Cure, which gave him entire relief.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.
Apply to
HARRIS & RHINE.
Independence.

BRILLIANT METEOR.—About eight o'clock last Saturday evening a brilliant meteor oppeared at Independence in the northwest. It sped southward till nearly over Independence, when it burst into fragments like a rock, each piece appearing as luminous as the original body before it exploded. Of course the the breaking up of the meteor was caused by heat from friction of the atmosphere, and the fragments may have been as fine as sand.

STAGE ROBBED.—Stage robbing appears to be a common occurrence in Tuolumne. The *Independent* of last Saturday says: "The Milton stage from Sonora, was stopped by a solitary footpad, at about day light on Thursday morning, near the forks of the road below Tuttletown, in the vicinity of the old adobe house. Pat Kelly was driving, and there were no passengers. He was ordered to stop, which he did, and the robber went through the two wooden express boxes—one from Columbia and the other from Sonora—by breaking aff the staples. There was no coin in them or in the iron safe, which he did not attack. He is represented to be a short man and wore a sack over his head. One of the boxes and the sack were brought to town on Thursday forenoon. Sheriff McQuade and Constable Moody started after the robber, as soon as the news was received here, but have not found him yet.

BORN.

FERNBACH—At Independence, March 25 1885 to Mr. and Mrs. Joseph Fernbach, a son.

CAPONIZING.—In reply to inquiries for information on the art of caponizing the following instruction is given by a correspondent to the *Pacific Rural Press*: "It is not difficult to perform if one likes such operations. The tools required are a pocket knife, a steel splint with broad, flat hooks at each end, a tube with the end flattened, through which is passed a horsehair loop, projecting through the flattened end, a steel rod with spoon at one end and pointed hook at the other, and a pair of tweezers. First, neither feed or water the cockerel for twenty-four hours. Then secure him and remove the feathers on his side, a space two inches long at the junction of the thigh with the body, and in a line between thigh and shoulder. Then pull the skin backwark so it will slip forward again and cut a slit about one and one-half inches long between the last two ribs, and parallel with them. Be careful not to cut the intestines. Now separate the ribs by attaching one of the hooks to each, and allowing the ends of the splint to spread, as they will do when let go; the intestines may then be pushed aside with a spoon handle or other smooth instrument, so as to see the testicles attached to the back. There is a tissue which covers them, which hold with the tweezers and tear open with a pointed hook. Then insert the flattened tube and pass the horse hair around the testicle and cut it off by giving the hair a sawing motion. Remove the testicle and blood with a spoon. Cut the other off in the some way. It will be found on the other side of the back. Allow the skin to go back over the slit in the side and the bloody feathers are the only cover necessary. Plenty of fresh water and soft food should be fed sparingly until the bird is all right, which you can tell by his movements, as he will not scratch till healed. The instruments can be had for three or four dollars of H. H. Stoddard, Hartford, Ct.

NEW ADVERTISEMENTS

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

NOTICE IS HEREBY GIVEN THAT SEALED Proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk, until Tuesday, the 5th day of May 1885, at 12 o'clock M., for the boarding of Inyo county prisoners for the term of one year beginning MAY 1, 1885, and ending May 1, 1886. Said bids to designate the price per diem for each prisoner, and said board to be paid by warrants drawn upon the General Expense Fund, on bills duly sworn to and presented at the regular meetings of the Board of Supervisors. Proposals must be endorsed, "Proposals for Boarding County Prisoners," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on said 5th day of May, 1885, and the right is reserved to reject any and all bids.

By order of the Board of Supervisors
(SEAL) Attest: W. L. HUNTER, Clerk,
By THOS. CROUGH,
Deputy Clerk.

PROPOSITIONS FOR THE CARE OF INDIGENT SICK OF INYO COUNTY.

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county at the office of the County Clerk until 12 o'clock M., on Tuesday the 5th day of May, 1885, to contract for the care of said indigent sick, for the term of one year from May 1, 1885. Said bids to designate the amount for which parties contracting will care for said indigent sick on a basis of four patients throughout the year, and to include all medicine, medical attendance, nursing, board, lodging and washing; and said medical attendance to be given by a physician having the qualifications prescribed by law. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care. Said contractor to care for all the indigent sick of said county properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for. Said excess to be paid for by extra allowance on presentation of bill duly sworn to at the regular meeting of said Board immediately after said contract has expired; the average of four to be paid for at the regular meetings of the Board on presentation of bills duly sworn to, and all payments to be made by warrants drawn on the Hospital Fund of said County. The person or persons to whom such contract may be awarded shall give a good and sufficient bond in double the amount of such contract price for the faithful performance of said contract. The care and management of said Indigent sick by such contractors shall be at any and all times subject to the inspection of said Board of Supervisors, or any member thereof, or by any person appointed by the said Board for such purpose. Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on the said 5th day of May, 1885. And the right is reserved to reject any all bids.

By order of the Board of Supervisors.
(SEAL) Attest. W. L. HUNTER, Clerk
By THOS CROUGH
Deputy Clerk.

SHERIFF SALE.

BY VIRTUE OF AN EXECUTION ISSUED out of the Superior Court in and for the City and County of San Francisco, Department No. 6, State of California, in the suit of the Carson and Colorado Railroad Company, (a corporation) Plaintiff, against the Owens River Mining and Smelting Company, (a corporation) Defendant, upon a judgment rendered in said court on the sixth day of January, A. D. 1885, for the sum of fourteen hundred and fifty-two 30-100 dollars, besides costs amounting to the sum of fourteen dollars, duly attested the sixteenth day of March, A. D. 1885, whereby I am commanded to make the amount of $1466 30, besides accruing costs and interest I have levied upon all the right title and interest of the said defendant in and to the following described real property, to wit:

All that certain mine or mining claim known as the Montezuma mine, being 1500 feet in length by 600 in width; Also, all that certain mine known as the California mine, being 1500 feet in length by 600 feet in width; Also, that certain spring of water known as the Montezuma spring, for further description of said property reference is here made to book "N" of Deeds, page 529, Records of Inyo County; Also, all that certain mill site situated southerly from the town of Big Pine on the east side of Owens river, known as the Rhea mill site, together with all the buildings, furnaces, machinery, boarding house and all improvements on or near said mill site, with the appurtenances; all the above described property being situated in the Union Mining District, County of Inyo, State of California.

NOTICE IS HEREBY GIVEN, that on

Monday, the 27th day of April, A. D. 1885

between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m. of that day, in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Owens River Mining and Smelting Company, (a corporation) in and to the above described property, or so much thereof as may be sufficient to satisfy said judgment and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's Office, Inyo County, California, April 3d, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-sheriff.

REWARD!

I, THE UNDERSIGNED, WILL PAY, IN U. S gold coin, the sum of $150 for the arrest and conviction of any persons stealing any of my stock in California or Nevada.
[apr19 1y] FRANK SHAW.

Also, the Independence mill site, containing 1 03 acres, being lot No. 49 B.

Also, that certain mine known at the Eureka Mine, containing 18.31 acres, being lot No. 51 A

Also, the Eureka mill site, containing 4.65 acres, being lot No. 51 B.

Also, all that certain mill known and designated as the Surprise Valley Mill.

All of above described property being in Township 21 south, Range 45 east, Mount Diablo Base and Meridian, Panamint Mining District, Inyo county, California.

Notice is hereby given that on

MONDAY, the 13th Day of April, A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 10 o'clock a m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Inyo Con. Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, March 20, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-Sheriff

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNty of Inyo, State of California.
ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,
vs.
S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3,820 09, upon which there has been paid the sum of $3293 leaving a balance of $527 09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527 09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five. W. L. HUNTER, Clerk.
(SEAL)
REDDY & CONKLIN, Attorneys for Plaintiff.

Agricultural Machinery Abroad.

One year ago a circular was issued from the State Department, Washington, and sent to all the United States Consuls, requesting a statement from each relative to the mechanical and agricultural industries of the several countries in which they are located.

The circular stated that much of ultimate success in trade depended upon the proper initiatory efforts made to a clear understanding of the wants and requirements of the several countries. A report on agricultural machinery in the several districts represented by consuls has just appeared. We take from it a few extracts;

Bremen.—Mr. Gillcox, the Vice-Consul at Bremen, reports that wonderful advances have taken place during the past ten years in the manufacture of agricultural implements in Germany, France and Sweden, but that Germany has excelled in this particular any other country on the Continent. The general demands are for the cheaper finished goods of the class used in the United States thirty or forty years ago; and while the Germans are making great progress, it is a mistaken idea to think that they will buy our goods at the high prices they are sold for at home.

Russia.—The extraordinary cheapness of their own make of agricultural implements, the poverty of the people, and their near proximity to Germany, England and Austria, give the latter countries great advantages which the United States does not possess. Moreover, the system of long credits which is universal throughout Russia, would be a great bar to our trade, and be attended by great risk. The McCormick and Johnstone reapers and mowers have a fair sale in Southern and Central Russia. Owing to tendency which prevails in this and the neighboring countries to imitate good imported articles, the Consul general recommends that trade-marks should be registered and inventions patented, before the introduction of our machines.

South Russia.—Consul Paul, of Odessa, says that in that part of Russia, self-raking reapers, of both American and English make, are used to a considerable extent, and that the American reapers have the preference, and are driving the English reapers out of the field, and that American mowers and horse rakes are used extensively, but of the latter, many German imitations are being brought into the country.

Germany.—The Vice-Consul-General Hogue, of Frankfort, reports that American machinery has been introduced only to a limited extent, though such implements as hay and manure forks have been introduced to considerable of an extent, and give satisfaction. The plow making establishments in the South of Germany turn out from thirty to thirty-five different kinds of plows, to suit all the different kinds of land to be plowed. Imitations of several kinds of American plows are made in Berlin. The "American Eagle" plow is made there in exact accord with the original. The same authority says of hay rakes that the teeth are imported from the United States, and the other parts copied from the ordinary American rake.

Mr. Hogue recommends a prominent exhibition of our wares at some central point, Frankfort probably being the best, believing, he says, that a market would be found for them, if our manufacturers should combine and establish such an exhibition. Mr. Hogue closes his report by admonishing persons to secure patents on their articles before their introduction into Germany, otherwise cheaper and inferior goods will be produced that will injure the reputation of the American article.

Consul-General Brewer, of Berlin, says there are a number of establishments in the latter city engaged in the manufacture of agricultural implements one of which (H. F. Eckert's) employs nine hundred men. He manufactures wagons, threshing machines, clover mills, fanning mills, machinery for cutting and preparing beets for sugar making, stills for making whisky from potatoes, horse rakes and plows, the latter on a very large scale, some of which are exported. It was represented to Mr. Brewer that they were then filling an order for four hundred plows for South America, a field our manufacturers of agricultural implements, and other machinery ought to occupy. Mr. Brewer refers to the wonderful genius of the German mechanic for imitating the works of others, and refers especially to the vast number of Wheeler & Wilson, the Singer, and other sewing machines, of well known manufacture, which are exposed for sale in the stores of Berlin.

Bavaria.—Consul Harper, of Munich does not think it an easy matter to introduce agricultural machinery into Bavaria by the usual methods employed, but recommends that a number of manufacturers of different lines of agricultural implements combine and send out a reliable and efficient person to visit the principal towns of Germany, and exhibit the articles he has to sell. An exhibition is held about the first of October every year in Munich, which is largely attended by people from the surrounding country.

At these exhibitions machinery is shown in operation and a collection of agricultural machines and implements are displayed. Mr. Harper thinks it would be advantageous to our manufacturers to attend these exhibitions with their implements.

Saxony.—Mr. Dubois, the Consul at Leipzig, says the most popular of the American machines which have been introduced into that country are the mowers, horse rakes and hay forks. American machines they prefer to Saxon make for the reason that they are lighter, and they believe them to be constructed of better material. Mr. Dubois mentions a peculiarity of the Teuton in his fondness for the color of red; this color it is said predominates in the machine factories of Germany. But the first wish of the German farmer is to have his machine made of the best material. In small implements the farmer prefers solidity, which he concludes will insure durability.

Mr. Bubois thinks the inventive talents of the Germans are improving very rapidly, and cites a Saxon genius who has made forty inventions (almost as many as our Edison) during the past three years, seven-tenths of which have proved practicable and of value.

Climate and Health.

Dr. Poore lately delivered a lecture on "Climate in its Relation to Health," at the Society of Arts. He began by alluding to the fact that the crew of the Eira enjoyed excellent health in the Arctic regions under conditions which, in this country, or still more in the tropical countries, would be considered most mal-hygienic. The reason probably was that in the Arctic regions putrefaction and allied changes were impossible, owing to the cold and dryness, and the diseases dependent upon putrefaction were also impossible. Attention was drawn to the fact that most of the diseases which were fatal in tropical countries were connected with putrefaction and decay, and, as instances of this, malarious diseases, yellow fever and cholera were cited.

Since putrefaction depended upon the access of minute organisms to the putrescible matter, and since these organisms were found in the atmosphere as well as in the soil and water, a study of the floating matter in the air became most important. The air has been systematically examined in Paris and Berlin, and especially at the Observatory of Montsouris in the former city. Among floating bodies in the air were to be found spores of fungi, pollen grains of starch, alga, etc., besides mineral matter of great variety. Miquel, by means of cultivation experiments, had been at great pains to estimate the number of bacteria and allied micro-organisms in the air, and the result of his experiments has shown a striking connection between the density of population and the number of bacteria in the air.

Thus, in each cubic meter of air there were found at the following stations the bacteria in number as follows: In the high Alps the air was pure, absolutely free from bacteria; on the Lake of Thun, at an elevation of 560 meters, 0·8; near the hotel of Thun, 2·5; in a room of the hotel, 60; in the park of Montsouris, 760; and in the Rue de Rivoli, 5,500. The largest numbers found were in the hospitals, where each cubic meter of air contained as a minimum, 5,500; and as a maximum, 28,000. In order that bacteria and other microbes may flourish a suitable soil is necessary. Raulin's experiments with Aspergillus niger were explained. Raulin found that he could grow a given amount of aspergillus on a given area of a liquid of definite composition. This liquid contained, among other things, one fifty-thousandth part of zinc and if the zinc were omitted, the crop of aspergillus fell to one-tenth of the normal, and if one one-million-six-hundred-thousandth part of nitrate of silver were added, the fungus would not grow at all. This showed the importance of mineral ingredients in the composition of the "soil," and this fact helped in some measure to explain why it was that people seldom had the the same fever twice. The reason being that the first attack exhausted the blood of something that was necessary for the growth of the organism upon which the fever depended.

Cabinet Officer.

The handsomest man in the Cabinet is Endicott, the Secretary of War. A grave, manly face, with pale regular features, surmounted by a full head of mixed gray hair, which falls gracefully down and across a high forehead, making a pleasing picture that is much improved by a full gray mustache.

THE word "hell" occurs eighty-six times in Shakespeare's writings and "heaven" occurs three hundred and six times.

AN English wheat firm has failed for £1,000,000.

Full particulars, directions, etc., sent free. Immense pay is likely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO., Portland, Maine.

A PRIZE. Send six cents for postage, and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed from first hour. The broad road to fortune opens before the workers, absolutely sure. At once address, TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 8 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured from the first day. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY

It is a never failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhœa, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.
DR. INSTIE will agree to forfeit Five Hundred Dollars for a case of this kind the VITAL RESTORATIVE (under his special advice and treatment) will not cure, or for anything impure or injurious found in it. Dr. Mintie treats all private diseases successfully without mercury. Consultation Free. Pamphlet Information and Advice in sealed envelope, 5c. Price of Vital Restorative $1.5 a bottle, or four times the quantity, $5.00, sent to any address upon receipt of price, or C. O. D., secure from observation, and in private name if desired, by
A. E. MINTIE, M. D.
11 Kearney Street, San Francisco.
SAMPLE BOTTLE FREE
Will be sent to any one applying by letter, stating symptoms, sex and age. Strict secrecy in regard to all business transactions.
DR. MINTIE'S KIDNEY REMEDY, SPERMATICUM, Cures all kinds of Kidney and Bladder Complaints, Gonorrhœa, Gleet, Leucorrhœa. For sale by all druggists; $1.00 a bottle, six bottles for $5.00.
DR. MINTIE'S DANDELION PILLS are the best and cheapest Dyspepsia and Biliousness cure in the market. For sale by all druggists. oct25 1

An Arab Episode.

Mrs. Speedy, in her "Wanderings in the Soudan," relates the following curious episode: After a long day's march she was just settling herself down to sleep when her host, an Arab telegraph clerk, seperated from her only by a thin partition, began to say his prayers in a loud sing-song chant. She remonstrated; for a time there was silence; she was falling asleep when the clerk began his prayers again. Again she remonstrated, again there was a brief silence, to be broken, alas! too soon by the indefatigable clerk, who once more began saying his prayers "da capo," this time faster than ever. It was like "speaking by machinery: the whirr and buzz were terrific. We learned next morning that our host belonged to a sect which obliged him to repeat his prayers aloud, and which also enjoined, as one of its most stringent rules, that the voice of either a woman, a donkey, or a dog, if heard at any time during the service, made necessary that the whole of the prayers should be repeated."

Dancing Dudes.

A story has just come to light in Georgia which affords much amusement to natives at the expense of three Boston dudes, whose connection with a Georgia marble quarry took them there. They have had much amusement with mountain hoosiers, and delighted in showing off their superior accomplishments. While on their way to Tate's Wednesday morning, they met two harmless looking country boys, who, barefooted and with but one suspender over their shoulders, were trudging to town. The Bostonians stepped in front of them and ordered them to dance to a Massachusetts juba. When the mountaineers became satisfied that the Bostonians were in earnest, they pulled out two ugly-looking revolvers and changed the programme by ordering the dudes to dance. Thinking to humor the joke and thus escape easily, they danced awhile, but the boys would not let them halt. For two hours, under cover of mountain revolvers, the Boston boys danced such a jig as has never before been seen. When the time was up one of the mountaineers exclaimed: "Now run!" The Bostonians were only too glad to do so, and reached town footsore and weary, and are now seeking legal redress.

The Cowboy's Good Points.

The impression is quite prevalent that the cowboy of Dakota's plains is a "bad man," but Mr. Reed, father of the Reed Brothers, of Cheyenne River ranche, in consequence of recent experience, is of quite a different opinion. During the early part of the late storm, when the mercury was down among the forties, Mr. Reed came up from the ranche, and on the road lost a valise containing many useful articles. Ben Wilkins, well known to most of our people, happened along the trail soon after, and, finding the valise, opened it to ascertain to whom it belonged, and, notwithstanding the extremity of the weather, carried it on his horse a distance of forty miles to Rapid City and delivered it to its rightful owner. Such an act of disinterested kindness by an entire stranger strikes the average Eastern man as something new and novel, and the cowboy will hereafter find in Mr. Reed (who, by the way, is a regular correspondent for an Eastern newspaper) a staunch defender of the universally kind-hearted and generous, but much-abused fraternity.

Interesting to Anna Dickinson.

A recent writer in an English journal has plucked out of the heart of "Hamlet" "Hamlet's" mystery by declaring him to be a woman in disguise. The reasons for such a belief are soberly set forth. His parents concealed his sex from motives of ambition; this is one of the "foul crimes" of which the ghost speaks. That "Polonius" knows the secret accounts for "Hamlet's" dislike of him and for his own repugnance to a match with "Ophelia." It is this secret to which "Hamlet" alludes in his dying words. There are, too, innumerable isolated passages illustrative of "Hamlet's" timidity, his abhorrence of war, his disgust at the table excesses of his time, and other feminine peculiarities. On all these grounds, and others equally valid, the writer bases his "theory."

A Sociable Tenderfoot.

"I have always found Texans quiet and unostentatious people," said the drummer.

"Quiet and unostentatious? Good gracious! Really mean that?" said the pale man with a scar on his chin.

"Yes, I speak merely from my own observation and experience."

"Then you were never in Abiline in western Texas, were you?"

"Naw."

"Thought not."

"Why did you 'thought not?"

"Because there I met a gang of Texans who were so ostentatiously obtrusive that it's a wonder I'm not now in a land that is fairer than this. Tell you how it was. I was on the road with 'The Wages of Sin.' We played one night at Abiline. It was a very small place then. The theatre was over a livery stable. There was half a dozen saloons in the place and not much else. Most of the people who made up the audience came from the prairie. The majority of them were cowboys and teamsters. Many of them without coats—all carried revolvers and wore great jangling spurs. They were noisy and made audible comment on the actors and acting.

"After the performance I went across the street to the principal saloon to get a drink. It was a long narrow room with a counter running its full length. When I entered, the counter was lined with cowboys. All were drinking and talking loudly. I walked to the further end of the bar and ordered a modest snifter. While drinking it I realized that the eye of every cowboy in the place was directed toward me. The loud talking subsided.

"'Bet you $5, Jim, you can't shoot a hole in it without hurtin' him.'

"'Jim ain't drunk enough to miss a mark as big as that.'

"'Betcher life I ain't,' said Jim, a short light-haired man. 'I'll go ye, Tobe.'

"'But the feller might kick.'

"'Oh, blast his kickin'.'

"'I know, but—but 'twould be more perlite to gain his consent.'

"I knew they were talking about me, and I wasn't very comfortable. I started toward the door. The brigand, whom they called Jim, stepped out in front of me and said:

"'Pardner, you're one o' them actor fellers, ain't you? Well you're a daisy, you are. You gave us a good show an' now we want to be sociable.'

"I explained that I would like very much to be sociable.

"Kerrect ye are. 'Cause the tenderfoot what can be sociable an' isn't sociable must be made sociable. Now sing us a song.'

"I explained that I couldn't sing; that my role was the heavy villain.

"'Villain, eh? Horse thievin' an' burglaries I reckon,' said Jim. 'Well that goes with us, but you just sing us "Way Down on the Swanee River." Tune up.

"He held a pistol under my nose so close that I could smell the grease on the cartridges. Another pirate in leather leggins put his six shooter to my ear and said: "Now proceed to warble.'

"'Toot,' said Jim, and I tooted. I know as little about singing as I do about the internal economy of a saw mill, but I gave them "The Swanee River" and got an encore.

"'Now give us Otheller,' said Jim.

"'But Othello isn't a song.'

"'Doesn't make a dam bit o' difference; give her to us just as she is without any frills.'

"I gave them the "Farewell the Plumed Troops" speech from Othello.

"'Uncle Billy's got to hear that,' said some one. 'Yes, Uncle Billy's got to hear it,' said they all, and they marched me down the straggling street at 12 o'clock at night, stopped in front of a shanty, kicked in the door, woke up Uncle Billy who sat on the side of his bed and in the dark, for he couldn't find a lamp—listened to me while I repeated the Othello speech.

"Uncle Billy had a demijohn and set 'em up. Then my escort took me to the midnight train, and as I got on board, each shook me by the hand and stated that I was 'the sociablest tenderfoot' they had met in years."

Mark Twain's Favorite Style of Reception.

Mark Twain, it seems, is a very congenial, moderate fellow, and likes a convivial time with friends. A few years ago, when he was here, a committee of newspaper men waited upon him and tendered some sort of entertainment in his behalf.

"Well," said he, with his customary colloquial limp, "I've had a good deal of this sort of marble palace and guilded chandelier business and I don't want any more, but if I could get together with the boys in a quiet cosy place, where a fellow might smoke a cob pipe and put his feet on the table if he wanted to, then I don't know but what I'd enjoy it."

The place was procured and the humorist sat with the pipe and tobacco beside him and his hat on his head and related yarns the whole night through to the edification of a score of fellow scribblers.

The Book Agent's Etiquette.

A book agent came into our office on Saturday last, and tried to sell us a work on "etiquette." As he went out he left the door standing wide open. The intelligent reader will at once see the moral.

"I suppose this will dew," said the florist as he turned the hose on his fast-fading stock in trade.

The Game was a Draw.

The wiles of that most seductive of all games, draw poker, was again illustrated the other night, when a card party of four Italians finally broke up in a sanguinary fight. It was the old story of too many aces in the hands of four knaves. The betting had gone very high and there was nearly a dollar in the "pot" when Pasquale Vincinello "called." There was nothing irregular in this, but when each man threw down two aces there followed a moment of terrible suspense and then a simultaneous dive for the boodle.

A free fight ensued, in which a stiletto in the hands of Attila Morobini played an active part in the ribs of Pasquale Vincinello. The latter took up a poker and dealt his assailant a pair of black eyes, and Attila retaliated by giving Pasquale three of a kind in the shape of three holes in the ribs. The were still engaged in this pleasant pastime when the two other members of the little game returned with a policeman and the whole party were arrested.

They told his Honor the next morning in the Tombs Police Court that they would not press any charges against each other, as they were old friends. His Honor declared the game a draw, ordered the money divided and discharged the prisoners.

Origin of Whist.

The origin of the date of the first playing of whist have of late been much discussed, particularly in England, where the game received a degree and study well nigh religious. Hoyle, the earliest writer of any note on whist, commonly called the father of the game, published his first "Short Treatise" about 1742, in his 70th year. Though educated for the law, he loved cards passionately, and was so skillful a player that he used to receive a guinea a lesson for teaching different games. He spent his days and nights at the card table which so agreed with him that he lived to be 97. Whist is supposed to be a development of trump or triumph played in England at least as early as the reign of Henry VIII. Trump is mentioned in a sermon by Latimer, the Sunday before Christmas, 1529, and by Shakspeare punning on the word triumph in "Antony and Cleopatra." Whist is not named by any writer of the Elizabethan era. The earliest reference to whist is in 1621 in the poems of John Taylor, the water poet. In the first edition of Cotton's "Complete Gamester" (1672) no allusion is made to whist, but in the second edition, issued six years later, it is mentioned as a game "commonly known in England." Cotton's saying that the game gets its name from the silence observed in playing it, although generally accepted, is by many regarded as incorrect. The proper name is probably whisk.

The Beggar Boys of Rome.

The poor look always cold. They are always ragged and dirty, in very picturesque clothes, and on their poor shoes lies the earth of the Lacustine period; and yet what a privilege it is to be even a beggar in Rome! I thought so at St. Peter's on Sunday, as I heard Cardinal Howard sing mass on St. Pete's day. Cardinal Howard is a stately prince of the church, and most admired by the English ladies here, who, it is said, kiss the hem of his garments.

On the occasion of this splendid ceremony, the choir of the Sistine chapel answered antiphonally the choir of the Cathedral. The famous tenors sang their best, and so did the sopranos of St. John Lateran; and no such music was ever heard in all the world outside of Rome. In front of me stood the little beggar brothers, no covering on their curly heads. They were enraptured with the music, as they well might be, and shamed my Protestant coolness by kneeling and crossing themselves in the right places. They were very much in my way, and they smelt of poverty and garlic; but I envied them—for they can always see this Rome, while I must leave it. I gave them a small copper tribute of respect, and of gratitude that they had taught me how rich a beggar might be. They rewarded me with a smile Raphael might have coveted, and a compliment in Italian far sweeter than anything I have ever heard in English.

A Hair Breadth Between Them.

Hannibal Hamlin tells that when he was Speaker of the Lower House of the Maine Legislature, there was among the members a very dandified old fellow whose chief weakness was in trying to conceal the baldness which was rapidly stealing over his head. He came into the House each morning with his hair so carefully combed that it looked as though each particular hair had been pasted in its place. Even as it was, there were scarcely enough to cover the bald spot. One morning Speaker Hamlin, thinking to have some fun, called this gentleman to him and said: "My dear Mr. Blank, I beg your pardon, but one of your hairs is crossed over the others." The member grew angry at once and replied: "You insult me, sir! You insult me!" and walked stiffly back to his seat. He refused to be reconciled, and he became Hamlin's life long enemy. A few years later, when Hamlin was a candidate for the United States Senate, this man was again in the Legislature, and his vote decided the contest in favor of Hamlin's opponent.

Edmund Yates in 1858.

In London *Town Talk* of the date of June 12, 1858, was an article descriptive of Thackeray, quite in the style of the London *World* of to-day. That the portrait was true to the life there is no reason to doubt. Had it not been the work of an artist clever with his pen it could not have so roused the resentment of its subject. This single extract will explain why the publication was, to say the least, very distasteful:

"No one meeting him (Thackeray) could fail to recognize in him a gentlemen; his bearing is cold an uninviting, his style of conversation either openly cynical or affectedly good-natured and benevolent; his bonhommie is forced, his wit is biting, his pride easily touched, but his appearance is invariably that of the cool, suave, well-bred gentleman, who, whatever may be ranking within, suffers no surface display of his emotion. * * * Our own opinion is that his success is on the wane. * * * Moreover, there is a want of heart in all he writes, which is not to be balanced by the most brilliant sarcasm and the most perfect knowledge of the workings of the human heart."

The strangest and bitterest part of the article by implication accused Thackeray of insincerity in his relations with the reading and lecture room public, asserting that "No one succeeds better than Mr. Thackeray in cutting his coat according to his cloth." Thackeray, two days after the article appeared, wrote Mr. Yates a long letter in which, among other things, he said:

"We meet at a club (the Garrick) where, before you were born, I believe, I and other gentlemen have been in the habit of talking without any idea that our conversation should supply paragraphs for professional venders of 'Literary Talk;' and I don't believe that outside of that club I have ever exchanged six words with you. Allow me to inform you that the talk which you have heard there is not intended for newspaper remark and to beg—as I have a right to do—that you will refrain from printing comments upon my private conversations; that you will forego discussion, however blundering, on my private affairs, and that you will henceforth please to consider any question of my personal truth out of the province of you criticism."

Poor Thackeray! To begin with, he was "mad," "mad as a March hare." There can be no doubt of that. One could guess it from a knowledge of the man and the provocation, even if his letter was not in evidence. But whatever would he do were he to fall into the hands of the enterprising Chicago reporter of to day? Even if Thackeray had talked with gentlemen in the Garrick before Yates was born, it is still painfully evident that the latter was too soon and too enterprising for his latitude and his generation.

Finally, Thackeray submitted to his club whether the publication of such articles would not be "fatal to the comfort of the club and intolerable in a society of gentlemen." The committee to whom the question was relegated decided that Yates must apologize or leave the club. And the identity of the Yates of 1885 with the Yates of 1858 is easily established by the fact that he vigorously contested the right of the club, through this committee, to concern itself with the matter at all. As all sorts of suits at law and no end of further bother were threatened, Charles Dickens came to the front as peacemakers, appearing as Yates' friend in a letter to Thackeray, "with the hope and purpose of some quiet accommodation of this deplorable matter which will satisfy the feelings of all concerned." Of Yates personally Dickens wrote: "He had recently done me a manly service I can never forget in some private distress of mine." At the end of his communication Dickens wrote, "You will burn this letter and I will burn your answer." Further correspondence followed between Dickens and Thackeray, the final result of which was an inevitable coolness, although the letters of the one began "My Dear Thackery," and the other "Dear Dickens." A full reconciliation took place only a brief time before Thackeray was found in his last sleep on December 24, 1863, of which coming together again Richard H. Stoddard says in his delightful "Anecdotal Biographies" of the two men:

"The two great authors met by accident in the lobby of a club. They suddenly turned and saw each other and the unrestrained impulse of both was to hold out the hand of forgiveness and fellowship. With that hearty grasp the difference which estranged them ceased forever."

Fashionable Foot-Gear.

In the matter of walking boots the purists lead the van. Nothing could be simpler nor more absolutely unadorned than the foot covering par excellence of to-day. No fancy work, embroidery, stitching, beading, or even irrelevant fancy buttons are visible. The boot is ornamental only in its quality, which is of kid, the finest and softest. The toe portion is roomy yet shapely. The heel, with not a suggestion of the "French Bend" about it, is yet graceful, and the sole of the foot is broad enough to allow the girl of the period to "set down her foot" emphatically without a wince or to promenade without having to stop at every other shop window, apparently to admire the display within the glass-bound cases, but in reality to give a rest to the pinched and rebellious foot.

Novel Ideas About Ocean Ships.

Capt. Lundborg, a retired naval officer, has been advancing some new ideas about shipbuilding among the yacht men and shipbuilders of New York. Capt. Lundborg says he has been led by observation of the fin whale and other fish swimming beneath the surface of water, with great rapidity and apparently little effort, to suspect that the plane of greatest resistence in water was at the surface. His own experience in swimming strengthened the opinion.

On the principle that water offers greatest resistance at the surface, he would construct a ship that would have its least dimensions at the water line and its greatest beam below the water, and the sides of which, instead of being constructed with somewhat convex vertical lines, as is the rule of the day in ship-building, would have strongly defined concave vertical lines. The bottom, also, instead of being very nearly round, would be very nearly flat.

While any existing ocean steamship would upset if her cargo and ballast were entirely taken out of her, a ship constructed on this model could not, by the nature of her build, be upset under any circumstances. She would roll much less, as the action of the water on her concave sides would steady her, and she would also pitch much less, while as to speed she would average at sea at least twenty-one to twenty two knots per hour, and be able to cross the ocean in from five to five and a half days. He would also secure greater power by having two propellers instead of one. The difficulty heretofore in the way of utilizing two propellers has been the problem of furnishing adequate support for the heavy shafts, twenty-eight to forty inches in diameter, required in ocean navigation, which must necessarily extend forty to sixty feet astern of the hull. Capt. Lundborg proposes to solve this problem by extending the heel of the hull under water beyond the stern above water and having the screws work flush with the end of it, putting one each side of the midship line. This arrangement would secure the further advantage of placing the screws so deep under water that they would never, in the pitching of the ship, rise above the surface and be subjected to the consequent loss of power.

The First Days of Stockings.

There were no manufactured stockings in the days of Lady Macbeth. A strip of cloth or woolen stuff was wrapped around the feet and up to the knees, and held in place by strings or straps, laced like our shoe-strings. Actors of a generation ago always wore such leggings when personating Macbeth. A remnant of these old improvised stockings may be observed upon the feet of newly arrived Chinamen. The first manufactured stockings of the ancients were of coarse material and clumsy fabrication. The first silk stockings known in England were knitted, by a lady of the court of Queen Elizabeth for her Majesty, who was so delighted with their softness and flexibility that she kept the donor knitting silk stockings as long as the august legs needed worldly covering.

A Tough Turkey—or Story.

C. S. Brownell & Co. a Chicago commission firm, received on Thursday a consignment of several barrels of dressed turkeys. A porter in the employ of the house was directed to open a barrel of the Thanksgiving birds, and proceeded to do so. He knocked in the head of the barrel, when he noticed a movement among the deceased poultry. Before he could notice the cause a large and plump gobbler stepped out of the barrel and ran wildly around the store, seemingly abashed at his own nakedness. The bird actually hadn't a feather on his body, and looked a very ghost of a Thanksgiving dinner. For a moment the porter was fairly "paralyzed," but seeing that there was nothing supernatural in the event, he pursued Mr. Gobbler and put an end to his existence by cutting off his head. The turkey had been killed, or it was supposed to have been killed, in the country and shipped when the mercery was several degrees below zero. At this temperature the poultry must have remained exposed for at least thirty-six hours. It is supposed that the man who slaughtered the turkeys failed to reach Mr. Gobbler's jugular vein, and he survived the plucking and the terrible cold, only to meet his death by the knife of an assassin.

The Better Kind of Gossip.

I say I hate a malicious gossip. But there is a sort of gossip I like—the innocent, entertaining sort, who talks to when I care to hear, about people whom his tattle does not harm or whose chat is too inclusive for personal mention, or who refers to persons whom he does not name, in a spirit of criticism not severe enough to condemn, but just enough to profit. You see I'm a tattler myself—by name—and think it no harm to indulge in tittle-tattle of this impersonal kind occasionally—growing more confidential, let it be understood, as the talk grows more pointed in application—a fault such talk inclines to—and not offended if my auditory turn aside at times a little bored or may be more indignant.

El Mahdi's Minister of War is said to be M. Veret, who was formerly a Captain in the French army. He it was who taught the Arabs how to break squares in battle.

INDEPENDENCE, CAL.

SATURDAY, APRIL 11 .....1885.

C. Mulholland,
EDITOR & PROPRIETOR.

SARAH ALTHEA has been sent to jail for contempt of Court. Every decent person has the utmost contempt for Sarah Althea. She threatens to shoot Sharon: the world could spare him, but if she carries out her threat, she should be hanged all the same.

ANY ONE taking a newspaper from a Postoffice becomes liable for the subscription price of the same, no matter whether he has ordered it or not. If a paper is not wanted the party to whom it is addressed should say so to the postmaster, and he will give notice of the fact to the publisher.

PRESIDENT Cleveland is evidently gaining rapidly in the public esteem and confidence. The reappointment of Mr. Pearson Post Master of New York, is proof that the President intends to deal honestly with civil service reform. Place hunters are getting angry another infallible sign that Mr. Cleveland is doing right.

THE death of General Grant may be announced at any hour. There will be a display of hideous wood cut pictures of him in nemspapers all over the country, having more resemblance to a chimney sweep than to the ex-President and General. The biographical notices that accompany these pictures will be equally valuable. The biography of General Grant is the history of the rebellion.

GENERAL GRANT counting the failing pulsations of his own heart, and with a thermometer marking the approach of the chill of death through his life blood, is one of the most remarkable instances of cool self-possession in the life of a man whose whole career displays the most wonderful self-possession. It would appear that the mind of General Grant is of such quality, and his will of such steadfast purpose, that this life is incapable of producing any events that would disturb or unsettle him. No man ever lived who was more thoroughly master of himself than General Grant.

Don't Hurry to Get Married.

Girls, don't be in a hurry to get married. If you are but 16, don't allow such an idea to get into your head for at least four years. Don't even run the risk of it by permitting any young man to get so far as proposing the point. Fight them off, and make them wait or go to somebody who is ready. Don't live under the impression that you must accept the first lovesick youth who proposes. Be patient, deliberate, and sagacious. There is a world of happiness for you between 16 and 20. The world would be a dreary old world if it were not for the sweet faces of young girls with their piquant sayings and melting smiles. After you have reached 20 it would be well to consider the matrimonial problem with some seriousness. Then if you have learned to think and deliberate you will probably make a suitable selection, and marriage with a worthy man is not only a woman's privilege, but, unless married too young, her best and highest development, mental and physical, can be attained in this State. Men and women were made for each other, and a very old but nevertheless true truism is that a happy marriage is the very Garden of Eden. An unhappy marriage is the reverse and the greatest of all calamities that can befall a pure, affectionate and noble woman.

The bank clearings of the principle cities of the United States last week amounted to $716,698,111, a decrease of $27,335,648 as compared with the corresponding week of 1884. The decrease is attributed in large part to the snow blockade.

A New Use for Safe Deposit Vaults.

One of our well known New York seed firms has now on deposit in the Mercantile Safe Deposit Company's vaults four hundred pounds of Henderson's Snowball Cauliflower Seed, which at the selling price of one hundred dollars per pound shows the value of this seed to be forty thousand dollars. Not only is this plan of depositing in vaults found to be cheaper than insurance, but what is of more importance is that if the seed should be destroyed by fire this quantity necessary for their trade could not be replaced at any price in time for the spring sales. When it is considered that four hundred pounds of Cauliflower seed will under favorable conditions produce nearly thirteen million plants, which when headed for market and sold at even eight cents per head will produce the sum of three quarter of a million dollars, the value this vegetable has attained in this country, where twenty-five years ago it was almost unknown, becomes readily apparent.

Growing Love for Frog Meat.

During the summer months from 1,000 to 2,000 pounds of frog's meat are eaten daily in New York. They are shipped fresh to that market from Canada principally, in large half barrels. The love for frog meat is on the increase. Epicures and men of extreme wealth give exhorbitant prices for them. The large green bullfrog is the chief kind sold. In Chicago they are called water chickens, before their flesh is white as that of a chicken when dressed properly.

Noah was not only a socialist but an arkist.

Mental Disorders and Brain Structure.

There are many mental disorders which are unaccompanied with any recognizable abnormal physical conditions of the brain; that is to say, in which there are no structural lesions of the brain cognizable during life, or which can be satisfactorily demonstrated in the autopsy; and there are many in which the mental alienation can not be fairly traced to any lesions in any other part of the body. The number of these examples may hereafter be found to be smaller than is now known, but for the present the fact is as I have stated. That a functional disturbance of the brain exists in such cases is self-evident; but for ought we know this may be due to some slight molecular, chemical, or vital changes in the nerve-cells of the gray matter of the brain, or of a group of cells, not denoted by any peculiar physical signs during life, and which can leave no possible traces after death. To cause mental derangement, it may be only necessary that these microscopic cells should be temporarily deprived of their normal supply of oxygen through the vascular system, or, on the other hand, a slight increase in the supply of the proper nutriment or stimulus may cause the same results. A simple loss of equilibrium, or change of tension in the nerve cell, may cause delirium. These abnormal physical conditions may be temporary or permanent, but in either case they will probably, in the future as in the past, elude the most careful observation of the physician, the chemist, and the microscopist. Science has calculated the vibrations of the musical chord, and measured the oscillations of a ray of light, but has not estimated the vibrations of the living intellectual nerve-cell, nor analyzed its aura which waits incessantly and instantly upon its will. It has furnished no means, therefore, of determining mathematically when the mysterious organ of mind is out of tune, or why its notes are discordant.

Is "Young America" Irreverent?

The Rev. Dr. Baldwin, of Boston, thinks not. He says: "My own convictions are that the youth of to-day possess even more real, heartfelt, sincere, Godlike reverence or respect. Thirty to fifty years or more ago the so-called reverence was too often a reverence of compulsion, whether applied to God, to the church, or to parents. The word then was too often "thou shalt" and "thou shalt not." It was upon this foundadation that the child's heart was educated in too many homes, and by much of the religious insrtuction given to them.

Reverence, in its full degree, is a matter of education and surrounding influences. Let this fact be ever kept in mind in our churches, Sunday schools, and homes, and by all who are in any way engaged or interested in the religious and moral education of the young men, and the young women of this country will be so fully imbued and possessed of the real, true, heartfelt, genuine spirit of reverence that the charge, if made, could not be based upon facts, that "Young America is irreverent."

The Proper Thing in Table Linen

Snowy damask is the correct table linen-cloth and napkins to match, with the gloss of satin on its shiny surface. The long-established, favorite old designs of snowdrop, fern, Queen's household, etc., hold their own in this and are reproduced in less expensive fabrics. There are also some charming novelties in globes and blocks scattered over the surface, with wide bands for border, either with or without sprays, scrolls or the Greek pattern superimposed upon the band. The sunflower design, with seed sprinkled between the blossoms, is another novel device, and yet another has Arabic characters wrought on its snowy expanse. Lunch cloths are white, with colored borders, buff, blue or red, and napkins come to match. Fine table linen is embroidered with a long narrow initial, or else with the monogram of the lady of the house, the preference of the moment being for the former. Doyleys are of linen, fringed on the edges and prettily embroidered in outline stitch with some quaint or artistic design, or else they match napkins and tablecloth.

The Busy Bee's Occupation Gone.

The spurious honey is now put up in little square boxes, which sell for from twenty to thirty cents a pound. It looks like honey, and it is said that it takes an excellent judge to tell that it is a fraud on the bee. The comb is manufactured with such skill that but few can tell it from the genuine article. It is made from paraffine or beeswax, and the honey is blown into it by machinery. Another kind is put up in glass vessels like ordinary jelly packages, the center of which contains a piece of honeycomb, and the honey is made by pouring about six parts of glucose around one part of honey in the comb. Some of it is adulterated with glucose, some with cane sugar, with the syrup of inverted cane sugar and others by heating ordinary sugar with an acid; but it all resembles honey and to a certain extent has its flavor and odor.

A negro named Edward Goode, while full of benzine, undertook to show how he could fire a blank cartridge in his mouth. Unfortunately the pistol was loaded. He called the attention of his companions to the fact that he was going to commit suicide and pulled the trigger. He reeled, aad as he gasped for breath smoke rolled from his mouth and blood trickled down on each side of his chin. At the time he fired he had about an inch of the pistol barrel in his mouth and his head was thrown slightly backward. The doctors say that is the most marvelous escape from instant death on record. Wounded as he was, Goode returned to Mount Holly and played the bass fiddle for the dancers until past midnight, when the bullet began to make itself felt in his head. His mouth is badly burned by the powder and this gives him more pain than does the bullet.

William's Worms.

During the past season I have been considerably interested in agriculture. I have met with some success, but not enough to madden me with joy. It takes a good deal of joy to unscrew my reason and make it totter on its throne. I've had trouble with my liver, and various other abnormal conditions of the vital organs, but old reason sits there on his or her throne, as the case may be through it all.

Agriculture has a charm about it which I can not adequately describe. Every product of the farm is furnished by nature with something that loves it, so that it will never be neglected. The grain crop is loved by the weevil, the hessian fly, and the chinch bug; the watermelon, the squash, and the cucumber are loved by the squash bug; the potato is loved by the potato bug; the sweet corn is loved by the ant, thou sluggard; the tomato is loved by the cutmorm; the plum is loved by the curculio, and so forth, and so forth, so that no plant that grows need be a wall-flower. [Early blooming and extremely dwarf joke for the table. Plant as soon as there is no danger of frosts, in drills four inches apart. When ripe, pull it, and eat raw with vinegar. The red ants may be added to taste.]

Well I began early to spade up my angle-worms and other pets, to see if they had withstood the severe winter. I found they had. They were unusually bright and cheerful. The potato bugs were a little sluggish at first, but as the spring opened and the ground warmed up they pitched right in, and did first-rate. Every one of my bugs in May looked splendidly. I was most worried about my cut-worms. Away along in April I had not seen a cut-worm, and I began to fear they had suffered, and perhaps perished, in the extreme cold of the previous winter.

One morning late in the month, however, I saw a cut-worm come out from behind a cabbage stump and take off his ear muff. He was a little stiff in the joints, but he had not lost hope. I saw at once now was the time to assist him if I had a spark of humanity left. I searched every work I could find on agriculture to find out what it was that farmers fed their blambed cut-worms, but all scientists seemed to be silent. I read the agricultural reports, the dictionary, and the encyclopædia, but they didn't throw any light on the subject. I got wild. I feared that I had brought but one cut-worm through the winter, and I was liable to lose him unless I could find out what to feed him. I asked some of my neighbors, but they spoke jeeringly and sarcastically. I know now why it was. All their cut-worms had frozen down last winter, and they couldn't bear to see me get ahead.

All at once, an idea struck me. I haven't recovered from the concussion yet. It was this: the worm had wintered under a cabbage stock; no doubt he was fond of the beverage. I acted upon this thought and brought him two dozen red cabbage plants at fifty cents a dozen. I had hit it the first pop. He was passionately fond of these plants, and would eat three in one night. He also had several matinees and sour krout lawn fastivals for his friends, and in a week I bought three dozen more cabbage plants. By this time I had collected a large group of common scrub cut-worms, early Sweedish cut-worms, dwarf Hubbard cut-worms, and short-horn cut-worms, all doing well, but still, I thought, a little hide-bound and bilious. They acted languid and listless. As my squash bugs, currant worms, potato bugs, etc., were all doing well without care, I devoted myself almost exclusively to my cut-worms. They were all strong and well, but they seemed melancholy with nothing to eat, day after day, but cabbages.

I therefore bought five dozen tomato plants that were tender and large. These I fed to the cut-worms at the rate of eight to ten in one night. In a week the cut-worms had thrown off that air of ennui and languor that I had formerly noticed, and were gay and light-hearted. I got them some more tomato plants, and then some more cabbage for a change. On the whole I was as proud as any young farmer could be who has made a success of anything.

One morning I noticed that a cabbage plant was left standing unchanged. The next day it was still there. I was thunder-struck. I dug into the ground. My cut-worms were gone. I spaded up the whole patch, but there wasn't one. Just as I had become attached to them, and they had learned to look forward each day to my coming, when they would almost come up and eat a tomato plant out of my hand, some one had robbed me of them. I was almost wild with despair and grief. Suddenly something tumbled over my foot. It was mostly stomach, but it had feet on each corner. A neighbor said it was a warty toad. He had uaten up my summer's work! He had swallowed up my cunning little cut-worms. I tell you, gentle reader, unless some way is provided, whereby this warty scourge can be wiped out, I for one shall relinquish the joys of agricultural pursuits. When a common toad, with a sallow complexion, and no intellect, can swallow up my summer's work, it is time to pause.

The Boom of the Banjo.

"There is a noticeable boom in banjos, which I believe is going to assume large proportions. The real value of the banjo is not yet widely known, and cannot be discovered from the use of it on the stage. Its finest effects are not seen there, even in the hands of the most artistic players. The public needs to be educated to its snperb range of tone, and to that end I am introducing a musical novelty in the shape of a banjo orchestra. No other orchestra of the kind, I believe, eqists anywhere, and the audiences we appeared before were delighted with the musical effect. We have twelve banjos, which range in size from the smallest piccolo banjo to the big professional instrument."

A tract of 8,014 acres is covered by the bill which passed the House Feb. 11 providing for the sale of the Sac and Fox Indian Reservation in Nebraska and Kansas. Only seventy-five Indians are living upon the reservation at present. It is provided that the lands shall be sold to the highest bidder at a minimum price of $8 per acre. Provision is also made that actual settlers are to have these lands in quantities not exceeding 160 acres

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

NOTICE IS HEREBY GIVEN THAT SEALED Proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk, until Tuesday, the 5th day of May 1885, at 12 o'clock M., for the boarding of Inyo county prisoners for the term of one year beginning May 1, 1885, and ending May 1, 1886. Said bids to designate the price per diem for each prisoner, and said board to be paid by warrants drawn upon the General Expense Fund, on bills duly sworn to and presented at the regular meetings of the Board of Supervisors. Proposals must be endorsed, "Proposals for Boarding County Prisoners," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on said 5th day of May, 1885, and the right is reserved to reject any and all bids.

By order of the Board of Supervisors

(SEAL) Attest: W. L. HUNTER, Clerk,
By THOS. CROUGH,
Deputy Clerk.

PROPOSITIONS FOR THE CARE OF INDIGENT SICK OF INYO COUNTY

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county at the office of the County Clerk until 12 o'clock M., on Tuesday the 5th day of May, 1885, to contract for the care of said indigent sick, for the term of one year from May 1, 1885. Said bids to designate the amount for which parties contracting will care for said indigent sick on a basis of four patients throughout the year, and to include all medicine, medical attendance, nursing, board, lodging and washing; and said medical attendance to be given by a physician having the qualifications prescribed by law. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care. Said contractor to care for all the indigent sick of said county properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for. Said excess to be paid for by extra allowance on presentation of bill duly sworn to at the regular meeting of said Board immediately after said contract has expired; the average of four to be paid for at the regular meetings of the Board on presentation of bills duly sworn to, and all payments to be made by warrants drawn on the Hospital Fund of said County. The person or persons to whom such contract may be awarded shall give a good and sufficient bond in double the amount of such contract price for the faithful performance of said contract. The care and management of said Indigent sick by such contractors shall be at any and all times subject to the inspection of said Board of Supervisors, or any member thereof, or by any person appointed by the said Board for such purpose. Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on the said 5th day of May, 1885. And the right is reserved to reject any all bids.

By order of the Board of Supervisors.

(SEAL) Attest. W. L. HUNTER, Clerk
By THOS CROUGH
Deputy Clerk.

REWAR D!

I, THE UNDERSIGNED, WILL PAY, IN U. S gold coin, the sum of $150 for the arrest and conviction of any persons stealing any of my stock in California or Nevada.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, APRIL 11.....1885

—Nice little shower of rain yesterday afternoon; very pleasent to have.

—Dunlop. of Nevada, took 228 head of cattle from Lone Pine last Saturday that he bought from Mr. Diaz.

—The Bridgeport *Chronicle-Union* says the officers of Mono county intend to test the constitutionality of the last section of the County Governments bill in the Supreme Court.

—During the first few days of the week storms prevailed along the summit of the Sierra, and from the valley it can be seen that a good deal of new snow has falleu. So much the better for Owens valley.

—The celebrated irrigation case of Miller & Lux against Haggin was argued before the Supreme Court in *banc* at San Francisco. This is the case that has drawn public attention so forcibly to the unjust application of the English law of Riparian Rights to the utterly unlike conditions of California.

—Caleb Dorsey, a prominent lawyer of Tuolumne county, is dead. He was a native of Maryland and aged sixty years. A few months ago Mr. Dorsey was appointed by Governor Stoneman a Director of the Insane Asylum at Stockton. His wife, three daughters and one son survive him.

—Yesterday Jack Welch, Pat Downs and one or two others who are working the McEvary mine together, brought in to Independence 142.12 ounces of gold bullion. The gold was got from thirty eight tons of rock, and is worth about nineteen hundred and ninety dollars, making the value of the ore about fifty two dollars per ton.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to
A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

TOO SLOW ENTIRELY.—A Democratic member of Congress has figured the thing out, and says that at the present rate it would take President Cleveland just sixty years to clean the Republicans out of Government service.

BODIE INJURED.—Without any previous warning the whole crew of miners employed at the Standard mine, at Bodie, were suddenly discharged last week and work on the mine stopped. This unlooked for event has a very depressing effect upon the people of Bodie.

ONLY SCARED.—The suspension of work at the Standard Con. mine caused quite a panic in Bodie. Contrary to what was at first feared, the stoppage was only of short duration; at the end of three days all the miners were again put to work, and operations are now going on as though nothing had happened.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.
Apply to
HARRIS & RHINE.
Independence.

TO SONOMA.—T. J. Furbee passed through Independence last Tuesday with his family on the way to Santa Rosa, Sonoma county. Mr. Furbee was accompanied by Mr. Blumenaur; the party had eight horses and a large covered wagon, and expect to make the trip in twenty days. They will go south and cross the mountains at Walker's Pass, and then turn north. The party expect to settle in Ssnoma county. Mr. Furbee is an old settler of Inyo county, and we regret to lose him.

SILVA CASE.—County Clerk Hunter has received a communication from Judge Arnot in reference to the motion made by the District Attorney for a dismissal of the Silva case. In his letter the Judge requests the Clerk to send him a copy of the motion, and says: "While I have reached a conclusion favorable to the motion, I do not wish to make any order in the matter until I have the motion here. You may notify the parties interested of the conclusion I have reached." This means, of course, that the case will be dismissed and so end the matter.

RUN AWAY.—Last Tuesday, when on the way from Big Pine to Independence J. J. Moore had a runaway. At Ezra Goodale's place are a few rough spots in the road, and when passing over these the horses made a quick jump or two; the front wheel of the buggy on the near ride suddenly went all to pieces the axle fell to the ground and Mr. Moore was thrown headlong againt the heels of the horses. The animals took fright, turned in the road and went at a tearing gallop back toward Big Pine. An Indian afterward met the team on top of the hill on the other side of Blackrock, stopped them and brought them back to Mr. Curtis' place. The buggy had not sustained any further damage. Mr. Moore was cut and bruised some, but not seriously hurt.

A Chancellor's Opinion.

Hon. James Harlan, ex-Vice Chancellor of Louisville, Ky., a brother of Justice Harlan, U. S. Supreme Court, says of St. Jacobs Oil; "I used it, and I know full well whereof I speak in pronouncing it a most extraordinary cure for all that is claimed for it by its proprietors. Every family should have it."

Inyo Should be Represented.

Nevada is to have a State Fair at Reno next Fall. State and County fairs afford the very best opportunities for making known the resources of a country. Intelligent and interested people attend these fairs to get information, and in this way have their attention drawn to the resources and productions of regions that would otherwise remain entirely unknown to them. Inyo county is prevented by deserts and mountains, and want of railroad facility from making any display of her resources at fairs in our own State; but everything the county produces can be cheaply and easily transported to Reno, over the Carson & Colorado railroad. The county could make a fine display of cattle, hogs, horses and mules. In fruits, grains and vegetables a showing could be made that could not be surpassed anywhere. Such a display of grapes could be made, and such samples of wine exhibited as would be a new revelation to those who do not know how remarkably well suited to viticulture a large portion of Inyo county is. This fair would afford an excellent opportunity for bringing the mining resources of the county to the attention of mining men. From the mines of the county, and also from the cabinets of Messrs. W. L. Hunter and H. A. Man very fair exhibits of our mineral resources could be made; there are several other collections of minerals in the county, that with the sources named would yield a collection of minerals whose beauty and value would be a credit to our mining resources. Some concerted action should be taken to have a good exhibit made at the Reno fair of the various productions of Inyo county. There is general complaint of dull times in the county; farmers suffer from want of market for their productions, and prospectors sigh because they do not find capital to develop their mines. Now, if the farmer would find a market, if the miner desires help from capital, both must go outside the county to get what they want. In one day, at a State Fair, more men can be seen who are interested in such matters, more information can be given and gained in relation to them, than in a week spent in any other way. It would be wise policy and sound business for the farmers, stockmen and miners of Inyo county, to prepare to make a proper display in their respective lines at the fair.

Would It Pay.

Miners say that in the neighborhood of Darwin there are vast quantities of ore containing silver and lead, that no attempt is ever made to work. They say that this ore contains on an average twenty five per cent of lead, and twenty five ounces and upwards of silver per ton. As the business is at present conducted, miners say that they can not make wages taking out ore that contains less than thirty ounces silver per ton. The smelters will not work ores for less than twenty ounces silver per ton, and all the lead the ores may contain. In getting out ore the miners select and throw away all that they think will not contain thirty ounces or over per ton. They say that great quantities so rejected contain over twenty five ounces per ton, and twenty five per cent of lead. Many ledges that consist of ores of this standard of value are not touched at all.

An opinion prevails that these rejected ores could be worked, and would return the smelters a good profit. The opinion is based upon certain figures; these figures may not be accurate but they will be given and if better information is furnished hereafter it will be published. The figures are as follows:—Near Darwin the total expense per ton for smelting ore is, on an average, about ten dollars. A furnace such as is used there, smelts twenty four ton per day. Total expense per day two dundred, forty dollars. The credit side of the account would be as follows:—Twenty four tons ore at twenty ounces per ton: four hundred eighty ounces; twenty five per cent lead, six tons. The silver at present quotations, is worth a dollar and seven cents per ounce, total for four hundred and eighty ounces, five hundred thirteen dollars sixty cents. At present quotations, and allowing twenty dollars per ton for transportation to San Francisco, the lead will be worth fifty four dollars per ton at the furnace: six tons, three hundred and twenty four dollars. Total for silver and lead, eight hundred, thirty seven dollars, sixty cents. The balance in four of the smelters being five hundred ninety seven dollars, sixty cents. The smelter must pay in San Francisco twenty five dollars per ton for extracting the silver from the lead; six tons at that rate costing one hundred and fifty dollars, which subtracted from the former balance leaves the smelter a profit on each days work of four hundred forty seven dollars. sixty cents. The smelter makes a little additional profit by getting the miners share of the silver at eighty cents per ounce, and selling the same at market rates.

Miners are willing to take out ore for which they are allowed five ounces silver per ton. If the cost of smelting were reduced from twenty to fifteen ounces per ton vast quantities that are now not mined, and much that is thrown away would be worked. If the figures given above are any where near the truth, such reduction might be made, and the smelter still realize such profit as is not found in other lines of business. To make this reduction would give such a stimulus to mining as would vastly increase the business; there would soon be hundreds of men at work in the country around Darwin, and though less profit accured to the smelter from each ton of ore worked, yet the quanity would be so much greater that he would gain more than at present.

The prosperity of the whole county of Inyo is so intimately connected with this matter, that every one is interested in it, and it is to be hoped that any one who can give information on the subject will do so. If there be any materiel errors in the statements here made, better information will be welcome, and will be promptly published.

Mining Items,

WHITE HILL REGION,

A new district is about to be organized at the White Hill. The mine of Alexander, Kehoe & Barnes gives fair promise of turning out another Cerro Gordo. The encasing rock is becoming easier to work; up to about a week ago the limestone was not only of a flinty hardness, but tough as well, making it difficult to blast. Now it is much easier to bore into it, and it also blasts better, The ore ledge is widening out a little as the work advances and is now about two feet wide. A vein of black ore, about one inch thick, has recently appeared in the ledge; this is undoubtedly sulphuret of silver, the most valuable of the silver ores, and according to metallurgists, contains 87·1 per cent. pure silver. Last Tuesday a charge of powder exploded in the ledge brought down ten tons of clean ore, every pound of which is valuable enough to send to San Francisco.

Mr. Issaac Harris, of Harris & Rhine was up at the White Hill mine on last Wednesday; he says that no such mining prospect has been seen in Inyo county for years. He saw enough to convince him that the brightest days of Cerro Gordo will be equalled, if not surpassed, in the new district. He brought down a number of samples of ore, all of high grade, and says that these are no better than the average of the ledge.

Pat Keyes has discovered a new ledge across the gulch from the White Hill mine. Right on the surface this ledge is two feet wide, and samples brought to town are as fine as any yet seen in that district. Pat names his claim the "Easter Sunday."

Dan Crough is another discoverer; he too has found a new ledge and made a location. On the surface this ledge is not so wide as the others, but the ore of all appears to be of the same quality. Dan has not yet christened his mine, but will no doubt give it an appropriate name

J. R. Eldred and Billy Hedges have leased the Pine Tree and A. K. B. mines from the owners of the White Hill mine, and began work some days ago to develop both mines. Thus far the prospect is excellent.

No mine can now be recalled having the name of "Father Matthew;" this would be a good name for some of these new mines that promise to do so much good.

Billy Hedge is prospecting in the new field and is sure to find a location that will be well worth throwing the protection of his name around.

AN OLD PROSPECTOR.

W. L. Millard passed through town last Wednesday. He left San Francisco March 4th, traveling with a span of horses and spring wagon, crossed the mountains at Walker's Pass, and is on his way to Elko, Nevada, about seven hundred miles from Independence. Mr. Millard is an old time prospector, and is familiar with the Pacific Coast from Alaska to Mexico. He prospected in Africa and Australia, and was one of the first discoverers of mines in the Darwin District, Inyo county. He claims to have been the only white man in Inyo at one time. He is still sanguine of striking a bonanza yet. Millard says he is a cousin to Millard Fillmore, but denies being proud of the relationship.

THE STRAUS CLAIM.

Mining men say the claim of Straus, in Beveridge, is a valuable property. The ledge stands vertical, is four and a half to five feet wide, and is sure to go at least forty dollars per ton in free gold. A boiler has lately been bought and the mill will soon be in readiness for work. Since the ledge was first found ore has been worked in arastras near by, right along, so that its value is now well known.

ARGUS RANGE.

In the Argus Range, in a mine belonging to J. B. Haggin, of San Francisco, fifteen to twenty men are getting out ore. The ore is assorted at the mine and all that goes over two hundred dollars per ton is shipped to San Francisco by way of Mojave. Large quantities of ore that go close to the above figure are being piled up at the mine. There is a means now in existence by which this ore can be put to good account by and by.

KEYNOT MILL.

Six and a half tons of ore from the Keynot mine, milled at Lasky's mill a few days ago yielded twenty-one ounces of gold.

QUEER CONTEST.—In a stable behind the office of the INYO INDEPENDENT a cat has a family of kittens. A few days ago, while the mother was absent, a brooding hen took possession of the cat's nest and hovered over the kittens. When the cat returned a battle ensued; the cat squalled and hissed and spit and made furious digs at the hen, but biddy raised her feathers and with beak and claws made the fur fly, drove off the cat and held possession of the nest and kittens. Tabby took a post of observation near by, and when the hen in her turn was forced to leave the nest in search of food, she again took possession of her own offspring. The cat had brought back a bird from her hunting trip; this she dropped at some little distance from the nest when about to engage in battle with the hen. Now the bird cannot be got without leaving the nest, and this the cat dare not do or the hen would again take possession. The dispute may not be settled until the kittens are old enough to take part in it. The hen and cat have since pooled issues and both now take care of the kittens together. The hen covers the kittens as she would chicks and they seem to like it immensely.

Personal Mention.

William Stansfield was down from the Maxim last Thursday.

Thomas Boland went to Los Angeles last week. He is expected back to-day.

Bob Mitchell and Waggoner, his partner, are prospecting over in Beveridge.

Crit Hampton came down from Big Pine last Wednesday, and is still in town.

J. Moffat was in town yesterday; Jim always rides a good horse when he comes in town.

Mrs. Shepherd and Mrs. Stubblefie'd returned last Tuesday from their visit to Stockton.

Charley Anthony came up from Darwin last Tuesday. He says business is improving that way.

W. J. Symmes was in town a few days ago for the first time in many weeks. He yet shows traces of recent illness.

Frank Silva was on hand last Monday ready for a retrial, but was not wanted, as the case had been postponed.

Ed. O'Neil, an old timer at Pioche and other Nevada camps, is Superintendent of Haggin's mine, in the Argus Range.

T. F. Connelly left town last Wednesday for Kern county. He has gone to bring back a lot of thoroughbred bulls for Mr. Rawson.

John Alexander and Dan Crough came in from the White Hill mine last Tuesday; they brought very favorable reports from the mine.

Joe McDermot got in from Beveridge last Thursday. He says there is yet a good deal of snow on the summit of the Inyo mountains. He came over after mules to pack ore.

Mr. Rafael Diaz, of Lone Pine, was laid up with sickness for two weeks or more. He was so far recovered as to be able to come to Independence this week. Mr. Diaz says his orchards and vineyard are now giving splendid promise of heavy crops next fall.

Odd Fellows Day.

On Monday two weeks hence, April 27, the Odd Fellows will celebrate their anniversary by a picnic at Fort Independence. Various amusements will be provided for young and old; especial pains will be taken to secure pleasure and amusement for the little folks. The place, the season, the occasion, all will be most favorable for a day of pleasure. The flowers of May, the grateful shade of the leafy month of June, beauties seen in those months only in climates less favored than our own, will then add their charms to the scene.

"Let old and young arise,
To hail the feast of roses,
And bless it as it flies."

The pleasures of the day will be followed by a dance in the evening under the direction of the gayest and oddest young Odd Fellow alive, Dr. J. D. Blair.

LEGAL.

SHERIFF SALE.

BY VIRTUE OF AN EXECUTION ISSUED out of the Superior Court in and for the City and County of San Francisco, Department No. 6, State of California, in the suit of the Carson and Colorado Railroad Company, (a corporation) Plaintiff, against the Owens River Mining and Smelting Company, (a corporation) Defendant, upon a judgment rendered in said court on the sixth day of January, A. D. 1885, for the sum of fourteen hundred and fifty-two 50-100 dollars, besides costs amounting to the sum of fourteen dollars, duly attested the sixteenth daay of March, A. D. 1885, whereby I am commanded to make the amount of $1466.50, besides accruing costs and interest I have levied upon all the right title and interest of the said defendant in and to the following described real property, to wit:

All that certain mine or mining claim known as the Montezuma mine, being 1500 feet in length by 600 in width; Also all that certain mine known as the California mine, being 1500 feet in length by 600 feet in width; Also, that certain spring of water known as the Montezuma spring, for further description of said property reference is here made to book "N" of Deeds, page 529, Records of Inyo County: Also, all that certain mill site situated southerly from the town of Big Pine on the east side of Owens river, known as the Elna mill site, together with all the buildings, furnaces, machinery, boarding house and all improvements on or near said mill site, with the appurtenances; all the above described property being situated in the Union Mining District, County of Inyo, State of California.

NOTICE IS HEREBY GIVEN, that on

Monday, the 27th day of April, A. D. 1885

between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m. of that day, in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Owens River Mining and Smelting Company, (a corporation) in and to the above described property, or so much thereof as may be sufficient to satisfy said judgment and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States.

Sheriff's Office, Inyo County, California, April 3d, 1885.

PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of F. H. Uhlemeyer, deceased.

NOTICE IS HEREBY GIVEN, THAT MONday, the 20th day of April, 1885, at 10 o'clock A. M. of said day, at the Court Room of said court, at the Court House in the County of Inyo, has been appointed as the time and place for proving the Will of said F. H. Uhlemeyer, deceased, and for hearing the application of William H. Uhlemeyer, for the issuance to him of letters testementary thereon, when and where any person interested may appear and contest the same.

Dated March 27, 1885.

W. L. HUNTER, Clerk,
By THOS. CROUGH, Deputy Clerk.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Franklin J. Wall, Plaintiff, against the Inyo Consolidated Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 17th day of March A. D. 1885, for the sum of five thousand five hundred and two 25-100 dollars besides costs amounting to the sum of five and 70-100 dollars, duly attested the seventeenth day of March, A. D. 1885, whereby I am commanded to make the amount of $5507.95 besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

Beginning at the south west corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true Meridian (the magnetic variation being 16 degrees east,) south 74½ degrees, west 7.73 chains to a post in rock mound on limestone croppings on the south side of Surprise Canyon; thence crossing said canyon north 15½ degrees, west, 6.47 chains to a post in rock mound near the junction of Sour Dough Canyon with Surprise Canyon; thence crossing a point of a hill and along the north side of Surprise Canyon north 74½ deg. east 7.73 chs. to the north west corner of the Surprise Valley Mill and Water Company's mill site; thence along the west boundary of said mill site south 15½ degrees east 6.47 chains to the place of beginning, containing five acres.

Also, that other parcel of land beginning a the southeast corner of the Surprise Valley Mill and Water Company's mill site and running thence by the true meridian (the magnetic variation being 16 degrees east,) north 74½ degrees, east 7.73 chains to a post in mound of rocks on the west bank and near the junction of Powder House Canyon with Surprise Canyon; thence crossing Surprise Canyon north 15½ degrees west 6.47 chains to a post in mound of rocks on the north bank of Surprise Canyon; thence down said north bank south 74½ degrees west 7.73 chains to the northeast corner of said mill site; thence along the east boundary thereof south 15½ degrees east 6.47 chains to place of beginning containg five acres.

Also that other parcel of land beginning at a post in rocks on the south east corner of the Wyoming mill site and running thence (variation 16 degrees east,) north 74½ degrees east 7.73 chs. to a post in rock mound; thenc crossing Surprise Canyon, north 15½ degrees west 6.47 chains to a post in rock mound; thence south 74½ degrees west 7.73 chains to north east corner of Wyoming mill site; thence south 15½ degrees east 6.47 chs. to place of beginning, containing five acres; being lot No. 42. Also, all the water rights, machinery, fixtures, belting, wheels, furnaces and appurtenances of every nature soever, formerly belonging to the Surprise Valley Mill and Water Company.

Also, all of that certain mine known as the Ida Mine, containing 19.37 acres, being lot No. 48 A.

Also, all that certain mine known as the Independence Mine, containing 18.49 acres, being lot No. 49 A.

Also, the Independence mill site, containing 1.03 acres, being lot No. 49 B.

Also, that certain mine known at the Eureka Mine, containing 18.31 acres, being lot No. 51 A.

Also, the Eureka mill site, containing 4.65 acres, being lot No. 51 B.

Also, all that certain mill known and designated as the Surprise Valley Mill.

All of above described property being in Township 21 south, Range 45 east, Mount Diablo Base and Meridian, Panamint Mining District, Inyo county, California.

Notice is hereby given that on

MONDAY, the 13th Day of April. A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 10 o'clock a m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Inyo Con. Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, Marc 20, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-Sheriff

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNty of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,
vs.
S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3.820.09, upon which there has been paid the sum of $3293, leaving a balance of $527.09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527.09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five.

W. L. HUNTER, Clerk.
(SEAL.)
REDDY & CONKLIN, Attorneys for Plaintiff.

INDEPENDENCE, CAL.:

SATURDAY, APRIL 11..... 1885

An Austrian Speculator.

One of the most expert speculators in Vienna is a man named Heinrich Kuffler. Over there, however, they with brutal frankness, call such men swindlers. Some of his late tricks are so good that even Jay Gould might take lessons from him. The Austrian speculator is fully up to Mr. Ward, on a smaller scale, however.

Not long since Kuffler appeared in the office of a wealthy lumber dealer who owned an immense lumber yard in the heart of the city. At this time there was a perfect mania for building houses in Vienna, and available lots commanded fancy prices.

"I want to buy the land you have got your lumber yard on. I want to put up a big hotel on it," said Kuffler.

"I don't care to sell."

"But I have got to have it. It is the only suitable place in this part of the city. I'll give you half a million."

"I don't want to sell. I would not sell for a million."

"I will give you a million."

The lot was not worth a million, but as the merchant had his lumber on it, and was wealthy, he did not care to accept the offer.

"No, I would rather not."

"I'll give you a million and a quarter, and to show you that I am in earnest, I'll put up fifty thousand marks forfeit. I must have a big lot on which to put up my new hotel," said he, placing that amount in thousand mark notes on the table.

The poor lumber dealer became nervous and excited. Great beads of perspiration stood on his brow. He asked for twenty-four hours to think about it. The trade was then concluded. The lumber was to be cleared away before two months. The fifty thousand marks forfeit were to be paid over at the end of a week. The lumber dealer was satisfied on that point. He knew Kuffler had the money.

The lumber man then proceeded to hunt for another lumber yard. Suitable vacant lots were extremely scarce. A land agent, however, who had heard that the lumber dealer was looking for a lot, offered him one for six hundred thousand marks, but only gave him the refusal of it for twenty-four hours. He said he could get that amount from another party. In his anxiety to sell the place to Kuffler for a million and a quarter, the lumber merchant paid down six hundred thousand francs to the agent.

Next gay Kuffler notified the lumber dealer that he would pay over the fifty thousand marks forfeit as he was unable to raise the million and a quarter, the purchase money for his lot.

With the aid of a skillful agent, the speculator had sold to the lumber merchant for six hundred thousand marks, a lot only worth four hundred thousand marks, thereby profiting, after paying the fifty thousand marks forfeit, a cool 150,000 marks.

The lumber merchant has now two lots on his hands, and is also in possession of considerable experience.

Texas Siftings And Cinders.

An unfortunate cripple entered a saloon and drank several glasses of beer.

"If I were you," remarked the saloon keeper, "I'd not drink too much, you may forget your crutches when you leave."

"Something happened to me yesterday that will never happen to me again if I live to be a thousand years old," remarked Gilhooly to Gus De Smith.

"What's that?"

"I was forty years old."

A country girl was about to leave for the city, where she proposed to become a servant. Her pastor gave her some good advice at parting. He said:—

"You are going to a large city. Be careful you do not go astray."

"There is no danger of that. I've got a brother who knows all the streets. He is a hack driver."

Herr Kreutzhuber is a member of the secret police. Being on his way home after midnight, he observed on the street lamp a placard.

"Ha! these scoundrels of Socialists have posted a placard denouncing His Majesty," said Kreutzhuber to himself.

Being determined to destroy the placard, he painfully climbs up the lamppost, and having secured the treasonable document he reads:

"FRESH PAINT."

"Mrs. Meredith, of Waco, heard a tremendous racket in the kitchen, and upon investigation found her two boys, Jim, and Bob, engaged in a rough and tumble fight.

"What do you mean by all this racket?" exclaimed the indignant mother. "Quit kicking each other, and let go each other's hair. Jim, take your thumb out of Bob's eye. Bob, let go Jim's ear. What are you quarreling about, anyhow?"

The boy's separated, and Bob explained:—

"We are quarreling about which is the best behaved boy. Jim says he is the best behaved boy and I say he is a liar."

Here they clinched again, and Mrs. Meredith had to pour cold water on them to get them apart. The question as to which is the most quiet, orderly boy has not yet been decided.

Down to the Marrow Bones.

Among curious New York dinner-party novelties is the dish of marrow bones which has become highly fashionable. They are brought to the table folded in a napkin, and if the reader inquire the process it may be added that a cunning little spoon, bucket-shaped and adapted to the purpose of extracting the marrow, has been invented. The bones are served hot and the marrow eaten with a thin crumpet.

Punch Drinking in Washington

The punch that is made in Washington society is no child's drink. This is the recipe for the standard Washington punch: One part of sour lemonade, one part of claret, one-half part of rum, one half part of best whisky. This concoction is then carefully sweetened and given additional flavor by strong dashes of various liquors. Sometimes champagne is substituted for the claret. The average glass in which this punch is served is round, broad and deep. It will hold as much as a teacup. This punch is iced to perfect coldness, and in some places is served from a huge block of ice, which is cut in the shape of a bowl. This punch is drank at receptions indiscriminately by young and old without regard to sex. The young people are the greatest patrons perhaps. Warmed up by the exercise of the dance the young people rush to the punch bowl to satisfy their thirst. It is not an uncommon sight to see young gentlemen drink five or six glasses, nearly a pint, of this strong mixture. I have seen young ladies drink from two to three glasses of this punch. How many people are there whose general habits are temperate who can safely drink two or three teacupfuls of rum, whisky and claret?

He Was The Bearded Lady.

"For a long time I used every Sunday to teach a class of little boys at the Mission Sunday School, a branch of our church at home," says a St. Paul society young lady. "There was quite a number of them, ranging from 8 to 14 years old, and they were just as intelligent and smart as I could have wished. But do you know the first Sunday that I took that class I was amused. Of course, I wanted to know their names, where they lived, and in fact who they were. Questioning them in turn I found their answers quite satisfactory until I came to a bright little fellow about 10 years old. He told me his name and where he lived, but when I asked him his father's business he did not reply at once. I reassured him with my brightest smile, but felt dubious when he said he guessed he couldn't tell me that. My curiosity was at once aroused and I at once made up my mind to know all about it. Thinking of the horrid dynamiters and burglars and all those awful men we are constantly hearing about, it was with some trepidation that I insisted on his telling me. His reply assured me to a greater or less extent, and was: "My papa is the bearded lady twice a week at a dime museum."

The Significance of Gesture.

In his essay on the philosophy of style Herbert Spencer indicates as to writing the same theory that Mr. Irving reduces to practice in acting. "How truly," says Spencer, "language must be regarded as a hindrance to thought, though the necessary instrument of it we shall clearly perceive on remembering the comparative force with which simple ideas are communicated by signs. To say 'Leave the room' is less expressive than to point to the door. A beck of the hand is better than 'Come here.' No phrase can convey the idea of surprise so vividly as opening the eyes and raising the eyebrows. A shrug of the shoulders would lose much by translation into words. Again it may be remarked that when oral language is employed the strongest effects are produced by interjections, which condense entire sentences into syllables."

The Train Boy on a Long Run.

Several years ago it was discovered that a slight error had been made in the calculation of the sun's distance from the earth, and owing to a misplaced logarithm, or something of that kind, a mistake of 3,000,000 miles was made in the result. People cannot be too careful in such matters. Supposing that on the strength of the information contained in the old-time table a man should start out with only provisions sufficient to take him 89,000,000 miles, and should then find that 3,000,000 miles still stretched out ahead of him. He would then have to buy fresh figs of the train boy in order to sustain life. Think of buying nice fresh figs on the train that had been enroute 250 years! Imagine a train boy starting out at 10 years of age, and perishing at the age of 60 years with only one-fifth of his journey accomplished. Think of five train boys, one after the other, dying of old age on their way, and the train at last pulling slowly into the depot with not a living thing on board except the worms in the "nice eating apples."

Davy Jones's Locker.

Sailors call the sea "Davy Jones's Locker" because the dead are thrown there. Davey is a corruption of "duffy," by which name ghosts or spirits are known among the West Indian negroes, and Jones is a corruption of the name of the Prophet Jonah, who was thrown into the sea.

Locker, in seaman's parlance, means any receptable for private stores. So that when a sailor says, "He's gone to Davy Jones's Locker," he means, "He is gone to the place of safe-keeping where duffy Jonah was sent to."

Soapstone For Walls.

The latest invention for covering walls and ceilings is called "soapstone finish," and is mainly composed of pulverized steatite. It takes a high polish, is pearl gray in tint, presents the best possible surface for painting, either in oil or in water-color, and will neither crack nor chip. It is claimed to be a non-conductor and non-absorbent, and can be washed without injury. Nails can be driven into it without damage. When subjected to heat, and moisture and chemical fumes, it is said to give no smell; it also does not turn yellow with age. It is recommended for hospitals, factories, cellars, markets, closets, pantries and kitchens, and is pleasanter to the eye than ordinary whitewash or cheap paper.

SALOONS.

IRWIN'S SALOON,

Cor. Edwards & Market Streets,

Independence, - Cal.

THE PUBLIC GENERALLY ARE respectfully invited to call and inspect my establishment, which has been entirely refitted and furnished in a style second to none on this side of the mountains. A SPLENDID NEW BILLIARD TABLE provided for the amusement of patrons.

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST."—Planned by HORACE GREELEY, LL.D.

All our greatest institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown University, Cornell University, Amherst, Dartmouth, Rochester, Madison, University of California, etc. Thousands of our greatest schools have decided it to be THE BEST. It is not only the BEST CYCLOPEDIA but it is a whole library of "LIVE KNOWLEDGE" in the gems of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. R. Spofford, Librarian of Congress, Washington, D.C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the Library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL.D.

"By far the best," etc.—Hon. Alexander H. Stephens, LL.D.

"The best we have," etc.,—Hon. Wendell Phillips, LL.D.

SOLD BY SUBSCRIPTION ONLY.

Chopped Out.

A Minnesota man is lobbying in the State Legislature to have a bill passed giving him a first-class sleigh. He says there is plenty of snow on the ground, and plenty of money in the Treasury. These two facts make it proper that he should have a sleigh, and he would like to see the iron-handed despot who will dare to refuse his request.

The party who paid a dollar for a ticket, writes as follows:

George Augustus Salaratus,
Don't you lecture here any more,
Lest we call you, though a stranger,
An unmitigated bore.

Crabb Robinson said that Goethe never had an affliction which he did not turn into a poem. And every living editor will tell you that no budding poetic genius ever had a poem which he did not turn into an affliction.

"What would you do if I should die?" asked a wife of her husband as she laid her fair white arms around his neck. "Well, really, my love, I hadn't thought of it," he answered abstractedly, "but I presume I'd bury you."

"Oh, no; he doesn't amount to much," said a young lady, referring to a rather effeminate youth. "Why, he actually wears ear-muffs!"

A Webster, N. H., man swopped horses 230 times in 1883, and 222 times in 1884. And yet Tim Ochiltree, Joe Mulhatton, and Eli Perkins are still disputing which one of them has the best right to be called The Great American Liar.

Boston has 2,200 justices of the peace, and she needs them all as long as John L. Sullivan is in his present flourishing condition.

Dio Lewis says he had no difficulty in getting into barrooms in any part of Iowa. Of course he didn't. It is pretty cold weather when Dio has to go thirsty.

A Kentucky man is said to have been cured of stammering by the kick of a mule. If there is any one thing that will make a man talk volubly, quickly and vehemently it is the kick of a good healthy mule.

Mr. J. R. Pitkin delivered the address of welcome to the old liberty bell at New Orleans recently. If any one can be expected to understand the true inwardness of a subject, a Pitkin.

The Rev. Heber Newton appears to be in much the same mental state Douglas Jerrold was once. A lady undertook to explain to him the beauties of the five points of Calvinism. Jerrold listened patiently until the doctrine of election had been elucidated, when he exclaimed: "Well, if I had known that I was born to be damned, I'll be damned if I would have been born!"

A father of seven children calls his mansion "The House of the Seven Gabbles."

Jones: "Yes, sir, its mighty hard to collect money just now. I know it." Smith: "Indeed. Have you tried to collect and failed?" Jones: "Oh, no." Smith: "How, then, do you know that money is hard to collect?" Jones: "Because several people have tried to collect money of me."

Tennessee exhibits at the New Orleans Exposition a wedding coat made by Andy Johnson in 1839. The "spectacle" made by Andy Johnson at his inauguration in Washington a score of years ago, is not on exhibition, we believe. It was a much "tighter fit" than the wedding coat.

"Why do you beat your husband?" queried Justice Welde at Essex Market Police Court, New York, when Catharine Mullen was arraigned at the bar.

"He's a dynamiter, Judge, but I'll knock the nonsense out of him."

"How do you go about it?" asked the court.

"I beat him black and blue at every new explosion."

"I was talking dynamite to a friend," said the man, "when my wife came in, took up a club and beat me."

The woman was discharged.

Many musical instruments are now made of paper.

Heir apparent—The first visible mustache.

If "bread is the staff of life" then pound cake must be the gold-headed cane of existence.

Fearful Partner at cards.

It was in our quarters at Calcutta. We had been playing all the evening at whist. Our stake had been gold mohur points, and twenty on the rubber. Maxey, who was always lucky, had won five consecutive bumpers, which lent a self-satisfied smile to his countenance, and made us, the losers, look anything but pleased, when he suddenly changed countenance, and hesitated to play. This the more surprised us, since he was one who seldom pondered, being so perfectly master of the game that he deemed long consideration superfluous.

"Play away, Maxey; what are you about?" impatiently demanded Churchill, one of the most impetuous youths that ever wore the uniform of the body guard.

"Hush!" responded Maxey, in a tone which thrilled through us, at the same time turning deadly pale.

"Are you unwell?" said another, about to start up, for he believed our friend had suddenly taken ill.

"For the love of God, sit quiet!" rejoined the other, in a tone denoting extreme fear or pain, and he laid down his cards. "If you value my life, move not."

"What can he mean?—has he taken leave of his senses?" demanded Churchill, appealing to myself.

"Don't start—don't move, I tell you," in a sort of whisper, which I never can forget, uttered Maxey. "If you make any sudden motion I am a dead man!"

We exchanged looks. He continued:

"Remain quiet, and all may yet be well. I have a cobra capella round my leg."

Our first impulse was to draw back our chairs, but an appealing look from the victim induced us to remain, although we were aware that should the reptile transfer but one fold, and attach itself to any other of the party, that individual might already be counted as a dead man, so fatal is the bite of that dreaded monster.

Poor Maxey was dressed as many old residents still dress in India, namely, in breeches and silk stockings; he, therefore, the more plainly felt every movement of the snake. His countenance assumed a livid hue; the words seemed to leave his mouth without that feature altering its position, so rigid was his look, and so fearful was he lest the slightest muscular movement should alarm the serpent, and hasten his fatal bite.

We were in agony little less than his own during the scene.

"He is coiling round!" murmured Maxey; "I feel him cool—cold to my limb; and now he tightens! For the love of heaven, call for some milk! I dare not speak aloud. Let it be placed on the ground near me; let some be spilt on the floor.

Churchill cautiously gave the order, and a servant slipped out of the room.

"Don't stir, Northcote—you moved your head; by everything sacred, I conjure you not to do so again! It cannot be longere my fate is decided. I have a wife and two children in Europe; tell them that I died blessing them—that my last prayers were for them—the snake is winding itself around my leg; I leave them all I possess—I can almost fancy I feel his breath!"

The milk was brought and carefully put down; a few drops were sprinkled on the floor, and the affrighted servant drew back. Again Maxey spoke:

"No, no! it has no effect. On the contrary, he has clasped himself tighter; he has uncoiled his upper fold. I dare not look down, but I am sure he is about to draw back, and give the bite of death with more fatal precision. Receive me, O, Lord, and pardon me; my last hour is come!" Again he pauses. "I die firm; but this is past endurance. Ah! no, he has undone another fold, and loosens himself. Can he be going to some one else?" We involuntarily started. "For the love of heaven, stir not! I'm a dead man; but bear with me. He still loosens; he is about to dart! Move not, but beware! Oh, this agony is too hard to bear! Another pressure, and I am dead. No, he relaxes! he relaxes!"

At that moment poor Maxey ventured to look down. The snake had unwound himself; the last coil had fallen, and the reptile was making for the milk.

"I am saved! saved!" and Maxey bounded from his chair, and fell senseless into the arms of one of the servants. In another instant, need it be added, we were all dispersed, and the snake was killed, and our friend carried more dead than alive to his room.

A recent criticism of Irving describes him as stealing "upon his Quaker audience like a nightmare foaled in sulphurous fires from the lowest depths of the fabled regions of Pluto. This is a poetic paraphrase of Charles Thorne's well-know characterization of his brother Edwin's talents. Thorne was not poetic. He simply said that "Ned is a —— of an actor."

Young mother—"Do you think baby looks most like me or his father, nurse?"

Nurse—"Like you, mum. Mr. Jinks is a mighty handsome man!"

Advertisement—Wanted—A competent and civil nursemaid.

Young ladies who will not marry when they have a chance Miss it. No doubt of it. But what are they to do? When one accepts an offer she generally Mrs. it too.

Miscellaneous.

John Boyle O'Reney was convicted in England of high treason in 1866 and sentenced to twenty years' penal servitude. He escaped in 1869 and fled to America. Being curious to know whether the sentence was still hanging over him he recently proposed to lecture in Canada and sent a note to friends inquiring whether he might do so with safety. The result of his inquiries was that he has decided not to lecture. The prospect of seventeen years more of penal servitude is not alluring.

It is a little unfortunate, but whenever a corporation Senator pulls the trigger the people happen to be standing in the place where he is going to shoot. Mr. Edmunds has just buried in the calendar the bill to forfeit the Texas Pacific Company's land-grant—a measure involving some 15,000,000 acres of land. It is another singular coincidence that this is the only one of the special orders so put back, though each of the other special orders also bears a date earlier than that on which the trade dollar was taken up.

Wife—"What a number of ladies there was at church this morning wearing sealskin sacques. I counted no less than twenty-seven."

Husband (who won't see the point)—"Do you think that is the proper way to occupy one's mind, while at church? I didn't notice a single one."

Wife—"No one can scarcely be expected to notice such things when one's asleep."

A New Hamshire editor was attacked by a tramp the other day, and in crying out for help was delighted to see a man running to the spot. The tramp, however, continued to maltreat the editor, while the stranger hovered near, but failed to close in. "Why don't you help me?" exclaimed the discomfited editor. "Because I can't tell which of you is the tramp and which ain't," was the candid reply.

The lady of the house was a handsome woman of a mature order of beauty, and when she had completed her toilet she gazed fondly at herself in the glass, and remarked to her new maid: "You'd give a good deal to be as handsome as I am, wouldn't you, now?" "Yes'm; almost as much as you would give to be as young as I am." It is not believed that this epigrammatic young woman will be chosed again at the expiration of her present term.

The English sparrow has begun to gather straw for a nest. This able emigrant will have grandchildren looking up to him before his astonished contemporaries begin their annual courtship.

A young Bostonian, who recently went up among the hills of Vermont to get married to a farmer's daughter, was taken to task by the old man as follows:

"Now, Jeems, this 'ere match was kinder brought about by you and Susie, and I've had no chance to say anything to you. How much are you worth?"

"Well," replied Jeems, after some hesitation, "putting it on the basis of Western Union at 57 I am worth $30,000."

"Stop! young man—stop right thar!" exclaimed the old man. "I want a sounder basis than that! Jist figger on turnips at 75 cents a bushel and see what your value amounts to!"

Pride in One's Wife.

"Yes," said old Farmer Jones to a traveler who was stopping with him over night. "I've got as good a wife as any man in these parts, if I do say it."

"I am not married myself," returned the traveler, "but nevertheless I can appreciate the pride which a husband might take in a good wife."

"Why, stranger," went on the old farmer earnestly, "I've known that woman to get up at four o'clock in the mornin', milk sixteen cows and git breakfast for twenty men, an' have the hull thing done afore sunrise."

"You don't say so," exclaimed the stranger.

"Yes, sir, and not once only, but week in an' week out, and you can see as well as well as I kin, that she ain't a strong woman nuther."

A resident of this county was out hunting recently, and a storm coming up he crept into a hollow log for shelter. After the storm had abated he endeavored to crawl out, but found that the log had swollen so that it was impossible to make his exit. He endeavored to compress himself as much as possible but with indifferent success. He thought of all the mean things he had ever done until finally his mind reverted to the fact that instead of subscribing for his local paper he was in the habit of borrowing it from his neighbor and thus defrauding the printer. On this he says, he felt so small that he slipped out of the log without an effort.

Sara Bernhardt is cultivating a dimple on her chin, according to a French paper. When it gets developed it will be a great improvement on her present personal appearance. It will look like a slight nick in the brass foresight on a Winchester rifle, and will relieve her from her present appearance of being an unmounted broom-handle rampant.

It's unhappy author evidently intended that as a sighed remark.

An Expensive Word.

Much that is annoying in this life is occasioned by the use of a high priced word where a cheaper one would do. In these days of failure, shortage at both ends and financial stringency generally, I often wonder that some people should go on, day after day, using just as extravagant language as they did during the flush times. When I get hard up, the first thing I do is to economize in my expressions in everyday conversation. If there is a marked stringency in business, I lay aside my French, then my Latin and finally my German. Should the times become greatly depressed and failures and assignments become frequent, I begin to lop off the large words in my own language, beginning with "incomprehensibility," "unconstitutionality," etc., etc.

Julius Cæsar's motto used to be, "Avoid an unusual word as you would a rock at sea," and Jule was right about it, too. Large and unusual words, especially in the mouths of ignorant people, are worse than "Roughon Rats" in a boarding-house pie.

Years ago there used to be a pompous cuss in southern Wisconsin, who was a self-made man. Extremely so. Those who used to hear him assert again and again that he was a self-made man, always felt renewed confidence in the Creator.

He rose one evening in a political meeting, and swelling out his bosom, as his eagle eye rested on the chairman, he said:

"Mr. Cheerman! I move you that the cheer do appoint a committee of three to attend to the matter under discussion, and that said committee be clothed by the cheer with omniscient and omnipotent powers."

The motion was duly seconded and the cheerman said he guessed that it wouldn't be necessary to put it to a vote.

"I guess it will be all right, Mr. Pinkham. I guess there'll be no declivity to it."

And so the committee was appointed and clothed with omniscient and omnipotent powers, there being no declivity to it.

We had a self-made lawyer at one time in the northern part of the State who would rather find a seventy-five cent word and use it in a speech where it did not belong than to eat a good square meal. He was more fatal to the king's English than O'Dynamite Rossa. One day he was telling how methodical one of the county officials was.

"Why," said he, "I never saw a man do so much and do it so easy. But the secret of it is plain enough. You see, he has a regular rotunda of business every day."

If he mean't anything, I suppose he meant a routine of business, but a man would have to be a mind reader to follow him some days when he had about six fingers of cough medicine aboard and began to paw around in the dark and musty garret of his memory for moth eaten words that didn't mean anything.

A neighbor of mine went to Washington during the Guiteau trial and has been telling us about it ever since. He is one of those people who don't want to be close and stingy about what they know. He likes to go through life shedding information right and left. He likes to get a crowd around him and then tell how he was in Washington at the time of the "post mortise examination."

"Boys, you may talk as you're a mind to, but the greatest thing I saw in Washington," said he, "was Dr. Mary Walker on the street every morning riding one of these philosophers."

He painted the top of his fence green, last year so it would "kind of combinate with his blinds."

If he wou'd make his big words "combinate" with what he means a little better, he would not attract so much attention. But he don't care. He hates to see a big, fat word loafing around with nothing to do, so he just throws one in occasionally for exercise, I guess.

In the Minnesota legislature, in 1867, they had under discussion a bill to increase the per diem of members from three dollars to five dollars. A member of the lower house, who voted for the measure, was hauled over the coals by one of his constituents and charged with corruption in no unmeasured terms. To all this the legislator calmly answered that when he got down to the capital and found out the awful price of board, he concluded that he "per diadem" ought to be increased, and so he supported the measure. Then the belligerent constituent said:

"I beg your pardon and acquit you of all charges of corruption, for a legislator who does not know the difference between a crown of glory and the price of a day's work is too big a blankety blanked fool to be convicted of an intentional wrong."

An Essay on Hash.

Hash is a noun, common—in boarding houses—often parsed and frequently declined, neuter gender, singular case. Hash is not mentioned in the Bible, although many authorities consider that it is referred to in the verse which speaks of Abraham's doing penance by going in for sackcloth and hashes," and Shakspeare had it in his mind when he wrote of "mincing matters." Hash is like a good many things in religion—it has to be taken largely on faith. Many people object to it, when they are not in reality accustomed to anything better. Those who are continually clamoring for better fare should eat sawdust, which is really fine hash.

Let the World Know.

In the year 1871 there was living in Paris a Polish lady, the countess of X. She wore a very singular brooch. It was encircled by twenty precious stones, on a ground of dark blue enamel, covered in the center by glass. And what did this brooch contain? A portrait, or a locket of hair? No, only four common pins, bent together in the form of a star! And she wore this in memory of her husband, a Polish nobleman, who had been put into prison because he was thought to be a secret enemy to the government. It was a dark, deep dungeon, far down under the ground. He had no one to speak to, for no one was allowed to see him but the keeper of the prison, and he of course was not permitted to converse with the prisoner. Days, weeks, months passed on, and he was still left in his dungeon. He was most miserable, and feared that he should lose his senses, for his reason seemed to be giving way. Oh, if he had only some hope, some one thing to relieve his misery. Feeling over his coat one day, he found four pins. He took them from his coat and threw them on the floor of his dungeon, and then he went down on his hands and knees and felt all over the floor till he found them again. When he had succeeded in this he scattered them again on the floor, and could you have gone into his dungeon you would have found him groping on his hands and knees for his four pins. When, after six years' imprisonment, he was set free, they still found him groping in the dark for his four pins. It was all his work. Nor would he leave his prison without taking his pins with him. They were his best friends, because, they had given him something to do in his solitude, and his countess had them made into a brooch, which she valued more than gold. They had preserved her husband's reason.

The following is from Count Gonfalonieri's account of his imprisonment in the fortress of Spielberg, Moravia, for a political offense in 1835: "I am an old man now, but by fifteen years my soul is younger than my body! Fifteen years I existed in the self-same dungeon, ten feet square. During six years I had a companion. During nine years I was alone! I never rightly distinguished the face of him who shared my captivity in the eternal twilight of our cell. The first year we related our past lives over and over again. The next year we communicated to each other our ideas on all subjects. The third year we had no ideas to communicate. We were beginning to lose the power of reflection. The fourth, at the interval of a month or so, we would open our lips to ask each other if it were indeed possible that the world went on as gay and bustling as when we formed a portion of mankind. The fifth, we were silent. The sixth, he was taken away—I never knew were—to execution or to liberty. Even solitude was better than that dim, vacant face. After that I was alone. Only one event broke in upon my nine years' misery. One day—it must have been a year or two after my companion left me—the dungeon door was opened, and a voice—from whom proceeding, I know not—uttered these words: 'By order of his imperial majesty I intimate to you that your wife died a year ago.' Then the door shut, and I heard no more. They had flung this great agony in upon me, and left me alone with it."

Count Andryane adds the touching incident that for a time Count Gonfalonieri was allowed to receive letters from his wife, and when she was dying she wrote several letters, dating them at different future periods, that he might, when delivered, think she was still alive. This tender, loving-kindness was, however, cruelly frustrated by the sudden information of her death, so brutally conveyed by the order of the emperor.

Vocal Quality.

A lady was singing at a concert, and her voice was, to say the least, very thin in places.

"Ah," said her husband, who, after the manner of husbands who have musical wives, thought her vocal powers were great, "what a fine voice she has!"

"Very fine," replied a strange man at his side.

"What *timbre*," continued the husband.

"Considerable timber," responded the stranger again, "but too many cracks in it for weather-boarding, and not quite enough for a paling fence."

The husband remained silent during the concluding portion of the entertainment.

How Fahrenheit Got His Zero.

Fahrenheit was a mathematician and knew that a circle was divided into 360 degrees. He found that steam and ice were the most natural fixed points in temperature, at opposite poles. He therefore naturally divided the distance on his glass tube between ice and steam into the number of degrees in the diameter of a circle, which is 180. He wanted an instrument which could be cheaply made and which would measure above steam and below ice, so far as would be used in everyday life. He found that artificial cold could be produced which would cause the mercury to fall just thirty-two of the spaces he had marked off on his glass between ice and steam, and he there, sensibly or not, placed his zero or point from which he could count. Hence ice or freezing is thirty-two degrees above, and steam or boiling water is the diameter of his circle or 180 degrees above. [illegible]

TRAVELING.

Railroad Time Table.

CARSON & COLORADO R.R.

....TAKING EFFECT....

Thursday, Dec. 4, 1884.

STATIONS.	From Mound House No. 1.	To Mound House No. 2.
	Leave—	Arrives—
Mound House	9:15a. m.	6:00 p. m.
Dayton	9:45 a. m.	5:25 p. m.

Adaven de ice	4:10 p. m	9:30 a m.
Lone Pine	5:00 p. m.	8:30 a. m.
Keeler	5:40 p. m.	8:00 a. m.

Trains 1 and 2 run daily.
Train 3 runs Mondays Wednesdays and Fridays
Train 4 runs Tuesdays Thursdays and Saturdays

Passenger trains make close connection at Mound House with express trains of V. & T. R. R., which connect at Reno with eastbound trains of Central Pacific Railroad.

Stage Connections:

AT HAWTHORNE with United States Stage Company's coaches for Aurora (25 miles); Bodie (37 miles); Laundy and Bridgeport.

AT LUNING (5.5 miles from Mound House) with Gilmer, Salisbury & Co.'s tri weekly stages (leaving Mondays, Wednesdays and Fridays) for Downieville, Grantsville and Belmont.

AT CANDELARIA with U. S. Stage Co.'s stages for Columbus (8 miles), Silver Peak, Montezuma, Alida Valley, Gold Mountain etc.

SATURDAY, APRIL 18 .....1885.

C. Mulholland,
EDITOR & PROPRIETOR.

IT IS reported by Colonel Casey that there is a two feet thick bed of quick sand under the foundation of the Washington monument; that the weight of the structure is pressing out the sand, and the huge tower is liable to fall down.

BENARD Murphy, Champion Youth Walker of Australia, says in the Melbourne *Sportsman*; "On Monday previous to the match with Ormes, of Sydney, I was a attacked with the stitch.' I could not walk another yard, and gave up all hope of winning. I was advised to try St. Jacobs Oil. I did so rubbing a little on my side. I have not been troubled since, and won my match.

IN the whole state the acrage planted to grain this year is believed to be less than usual. The want of rain in all the counties west of the Sierra Nevada is sorely felt. Over a large portion of the San Joaqain valley the grain crops will be almost a failure. Summer-fallowed land gives the best promise for a fair yield, and a considerable area so planted is regarded as safe without any more rain.

CALICO is not quite so lively as it was a few months ago. The *Print* says: "Hundreds of miners that had flocked into camp to get the benifit of a 'boom' have scattered to the four points of th compass in search of and to assist in booming some other locality. The number of chloriders in the camp has increased lately, but when the hot weather sets in chloriding will be generally suspended until fall."

A REPORT comes from Texas of the discovery of rich gold fields in the Santa Rosa Mountains, about 100 miles west from Santa Rosa, Mexico. The discovery was made by the Davis brothers, who were working a profitable silver mine in the same range, but have abandoned the silver mines and located claims in the gold fields. The gold lies in quartz, and is discribed by old Californians to be the richest they ever saw.

THE first monthly report of observations taken by Mr. Grover at the United States signal station at Keeler' will be found in another column. This report is valuable, as it gives accurate information of the weather and atmospheric phenomena in Owens valley. The report will show to people in the east what a splendid climate we have in Inyo county, when such a record is made in March, usually the stormiest month of the year. Monthly reports will be made regularly, by the courtesy of Mr. Grover.

IT IS strange how careless people can be in the presence of the most loathsome disease. A recent case leads the Sacramento *Bee* to remark that the death of a human being occured in the State from the horrible disease known as glanders should awaken general attention to the need of promptly destroying alld omestic animals afflicted with the malady. Glanders is sure death, and it is folly to attempt its cure. The man who lately lost his life at Petaluma from the disease laughed when told his horse had it, and, to show his unconcern, drank from the same bucket used by the animal. In two weeks the man was dead. His fate should be a terrible warning to horse owners.

CONGRESS made an appropriation of $100,000 for the purchase of a site and building a post office in Sacramento. Our Legislature did not pass an act giving the United States exclusive jurisdiction over the property selected as such site; such exclusive jurisdiction being one of the conditions under which the appropriation was made It is a sore grief to the Sacramentans that this $100,000 cannot be distributed among them right away, but this cannot be done without the passage of the required act by the Legislature, therefore the Sacramentans want the Governor to call an extra session, otherwise they will have to wait two years longer before the money can be got. The Sacramentons are to be pitied; one hundred thousand dollars, speak the words slowly and think of such a lump of money. But then, to have such a treasure in sight, and not be able to tough it inside of two years, how tantalizing that must be. An extra session would no doubt suit Sacramento, but it would be an injury to all the rest of the State. The State could better afford to make a gift to Sacramento of one hundred thousand dollars than to have our extra session, and if Contoller Dunn succeeds in saving that quarter of a million dollars from the clutches of Bill Parks, that amount could be spared. The appropriation made by Congress will keep; if the office seeker's conception of heaven be correct, the coin is where "neither moth nor rust doth corrupt, and where thieves do not break through and steal."

A COMPANY in England is now making a new departure in mining operations by manufacturing rolled steel baulks and pit props as substitutes for wooden beams and props for mining purposes. As regards its use for mining purposes, it is advocated that greater strength can be obtained, and less space taken up than with the ordinary wooden beams, and that when the life of steel as against wood is taken into consideration steel has also the advantage in the matter of ultimate cost.

DURING the past year there has been a great increase of population in the northern counties of the state, and with this a corresponding increase of business and improved value of real estate, and, in fact, all kinds of property has increased in value. These gratifying results have been brought about by the efforts of an immigration association, composed mainly of business men. The members of the associaton contribute liberally for the collection and publication of such information of the resources of their section of the state, as will attract settlers, and find their compensation in increased business, and greater plenty of money in circulation. The great ranches in the Sacramento valley are being divided up into smaller holdings, and the country is rapidly assuming the settled and prosperous appearance of Ohio and Illinois. The business men of Inyo county should follow the example of their brethren in the north, and by helping to make known the magnificient resources of their own county, improve their own fortunes and bring fortune to others.

IS IT RIGHT? Some two years ago, John Spratt was convicted purely through the evidence of two self-confessed thieves, of participating in a highway robbery in Kern county. A motion for a new trial was made on the ground that the evidence of the confessed accomplice was not sufficient to convict, it being uncorroborated. The papers were all properly prepared and forwarded to the Supreme Court, at Los Angeles, on an appeal taken from the order denying a new trial by the Superior Court of Kern county. At the session of the Supreme Court when this appeal should have been heard, the Hon. R. E. Arick, the Attorney for Spratt, was unable to reach Los Angeles on account of travel on the Southern Pacific railroad being cut off through the washing out of the San Fernando tunnel. Unbeknown to the defendant or his Attorney, the case was subsequently transferred to Sacramento, and there the appeal was dismissed without notice. At the present term of the Supreme Court a motion was made to reinstate the case on the callender, and to have the appeal heard, which the Court refused, though the Attorney General consented in writing that the same might be done. The reason for this unaccountable ruling of the Court is at present to us unknown. Whatever it may be, Spratt has certainly never had his day in Court which the law gives him, and the Court should have guaranteed it.

THE old Comstock is a never failing source of interest. Something remarkable is always happening on or about the old lode. The latest marvel is an alledged discovery that the water in the flooded mines ebbs and flows like the tides of the ocean. Writing to Calico *Print* James Delavan says: "It is said that the waters in the flooded mines ebbs and flows with the regularity of tides of the Ocean. The water in the Yellow Jacket new shaft has been observed and daily measured, and it was found that the difference in the height of the water between the ebb and flow is exactly twenty-six feet, and that the tide is influenced by the moon in certain positions. To find the time of high water upon any day it is only necessary to state the time of high water on the days of a new moon, when the moon passes the meridian on that day. There will be another high water on the same day preceeding, or following that so found, by nearly twelve hours and twenty-six minutes—the calculations being made by the same rule as that used in determining the time of the ebb and the flood tides of the ocean. This subject is attracting considerable attention and will be thoroughly investigated. Observations will be made at Yellow Jacket, Justice, Alta, Silver Hill, and other shafts on the Comstock, when the water has obtained its maximum height. This ebb and flow in the deep levels seems to be a new and singular discovery, and it would be interesting to have the fact investigated and the question definitely settled, whether it is so or not. If it should be established that the waters in the mines do ebb and flow as the tides of the ocean, it will be something new, at least to me, and I and I suppose to many others.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.

Scientific Miscellany.

The artificial heat of London has been estimated sufficient to raise the temperature of an air stratum 100 feet thick over the entire city two and one-half degrees every hour.

An English writer points out the probability that a smoky atmosphere is not a wholly unmitigated evil, since its carbon and sulphur must absorb many germs of disease, and tend to prevent the spread of epidemics.

A large amount of oil exists in the stormy petrel, and when fat, according to Brunnich, the inhabitants of the Faroe Islands use it as a lamp, obtaining their light from a wick drawn through the bird's body.

The oldest geographical society has been generally regarded as that of Paris, but according to Dr. Ruge that honor belongs to the Cosmographic society of Nuremberg. It was established about 1740, while the Paris society was not founded until 1821. A Swiss geographer estimates that the world's geographical societies now contain 38,000 members.

An Interesting Celestial Visitor.—Encke's comet, which travels around the sun in about three and a half years without going beyond the boundaries of the solar system, and which has the honor of being the first known comet of short period, is chiefly remarkable on account of the retardation of its motion. This has amounted to about four days since 1819, and is supposed by some astronomers to prove the existence of a resisting medium in space. The date of the comet's perihelion passage this year is March 7th, and its return was first observed December 13th. It is visible only with a telecope.

The Ear's Capacity.—It has been found by Dr. Lawson Tait that as a rule, the ear in women can perceive higher notes—that is, sounds with a greater number of vibrations per second—than the ear in men. The highest limit of and ability for the human ear is somewhere between 41,000 and 42,000 vibrations. The ears of most persons seem to be unequally sensitive to acute sounds, the right ear usually hearing a higher note than the left. To show the ear's range, it may be added that very low notes of about fifteen vibrations per second may be perceived, but when the vibrations become a little slower they cease to produce the effect of a continuous sound, and each gives a separate impression upon the ear.

A Microscope's "Field."—Great as are the wonders the microscope reveals, it will not—as is sometimes supposed—show a fly magnified to the size of an elephant, nor a flea of horse-like proportions, for the reason that under a high power only a very small part of either of these creatures can be seen at one time. The size of the field of view covered by ordinary lenses has been computed as follows: With a power of 25 diameters, about one-fourth of an inch; with 50 diameters, one-eighth of an inch; with 100 diameters, one-sixteenth of an inch; with 500 diameters, one-eightieth of an inch; and with 1,000 diameters, one one-hundred-fiftieth of an inch, a space ordinarily invisible to the naked eye. Even the smallest creature shown to our unaided vision, therefore, cannot be seen entire when magnified 1,000 diameters.

Imitation in Birds.

I remember distinctly hearing a thrusher often repeating in its madcap song some notes new to my ear, which could not be ascribed to any Michigan bird of my acquaintance. After patiently waiting for some time in the glaring sun of a bright June day, I heard the notes so plainly that I was thoroughly convinced that they were an imitation of the song of a Southern bird—the "chuck-will's widow," so-called, a species allied to our whip-poorwill, and named—as in our familiar Northern representative of the family—from the words so plainly uttered. This thrush learned, then, the notes of the chuck-will's widow at least 500, and probably quite a thousand miles from Michigan, and yet reproduced them so distinctly that one could easily distinguish them and from mere descriptions in books at once tell the name of the bird imitated.

Here, mounting to the top of the tallest tree near its nest, it pours forth ecstatic melody, executing the most difficult strains with the same ease that it delivers the simplest notes. All noises are attempted; the schoolboy's whistle, the bark of a dog, or the bleating of a lamb are equally well executed and issue from its throat in a continuous, harmonious strain, frequently of an hour's duration. What wonderful mimicry; what a contrast to the best attempts of ventriloquists and imitators, traveling through the country to reproduce before audiences a few mumbled sounds or attempted imitations of the sounds and notes uttered by birds and mammals.

They were walking together under a very little umbrella, and she liked him well enough not to want a large spread of alpaca. He was modest, and seemed to be nervous, and she finally remarked, very softly, and with a note of interrogation:

"Charlie?"

"Yes, Fannie," he responded.

"I'll carry the umbrella, if you'll let me."

"Oh, no, I can carry it."

"Yes, Charlie, but you see, your arm takes up so much room that one side of me is out in the wet."

"I know that, Fannie, but what will I do with my arm; won't it be in the way just the same?"

"I don't know, Charlie. Gus Clark always knows what to do with his, when he is walking under an umbrella with Mary Martin, because Mary told me so."

Poor Charlie.

Menny a phool haz passed thru life with fair suckcess by taking a back seat and sticking to it.

A sound sleeper—He who snores.

Horace Greely's Horrible Writing.

Horace Greely was a character in his way. Among his many accomplishments was that of writing a very poor hand. He excelled in many things, but in this he distanced all competitors. He was positively without an equal anywhere. No living man, or woman, ever wrote as Greely did. Many incidents in this connection have been related, most of which have proven of much interest to the general reader. Tom Kelley, an old printer, who worked on cases in the *Tribune*, tells the following story, which, he says, was never in print:

"You know," says he, "Greely wrote an awful hand. Them days I thought I could read anything. I was working in Boston, and had heard a great deal about Greely's awful writing. I made up my mind to go to New York and 'tackle it. I went. As it happened, however, there were only two printers on the *Tribune* who could set his matter, and they were given all of it to set. All went well for some days, for Greely was engaged upon his work, a 'Busy Life,' for Bonner's New York *Ledger*. The *Ledger* had no printers that could read his copy at all. Word was given out that two men who could read Mr. Greely's writing were wanted at the *Ledger*. They were to apply to Mr. Greely and make a test. A situation upon the *Ledger* was looked upon as a splendid thing—a soft snap. Several printers invaded Mr. Greely's inner den. I went in, and as I stepped up to his desk, the old man looked up from his writing—and such a look, I never shall forget it. I never saw such an innocent, happy expression on a man's face in all my life. It was the first time I had ever seen him closely, and I almost loved him. His eyes appeared to me like some dear old memory, so happy, cheerful and placid.

"You want a printer or two to work on your manuscripts, Mr. Greely," I said.

"Yes," said Mr. Greely, "two men are wanted who can read my writing. They tell me I write a 'bad hand.'"

"So they say," I remarked.

"Can you read it?" he asked, looking me squarely in the face.

"I don't know, I think I can. I have read almost everything. I have never yet been stumped."

I need not remark I felt very conconfident. I was certain I could read it. I had a very large opinion of my ability in that regard.

"I will try you," he said, at the same time picking up a sheet from the midst of a great pile upon which he had been at work. The page was picked up at random. "Read this," he said, handing the page to me.

I took it and read:

"filorid. The menagerie swung over these murderous uneccentric Norman, who had thrown her bat at a dog"—the next word somewhat puzzled me. I stopped, and after looking at it a moment, looked at Mr. Greely. He was all smiles. I thought he was pleased at the progress I had made. At last, however, I had figured out the word, and read on:

"reseated to her most pleasant guard—regrets of these lines, reeking the tympanum, and consoling these on, and wore themseives against it having."

This was the end of the page. I thought it was a little "mixed:" that it didn't read just right; but I had heard that Mr. Greely was eccentric, and that his wording was always odd and profound. I looked at Mr. Greely as I handed back the page. He looked at me, still smiling. He didn't say much, but finally said:

"That will do. You may go. If I conclude to take you I will send for you."

I went out, feeling that I had read the page very nicely.

Several others made trials. John Maguire, now in Boston, made an effort, on the same page; we went in together. Here is his reading of it: "fiends. Her magnetic sway o'er the waveless unconfines of worms who had grown his lest a dog revealed to her the worst glorious griddle risest of their lines, seeking her syrup and control, thereon, and wear three stitches around at hanging."

* * * * * *

When we had reached the end Mr. Greely was almost wild with merriment. His merriment knew no bounds. He told him what he had told me, a few moments before, and we went out together. I waited patiently for some weeks, fully expecting a call. None came.

Several parties came in as we came out, but what success they had I don't know. However, printers who could "make out" his writing, were found, and the articles began appearing regularly. I kept an idea of that page, and in a few weeks I discovered it, and copied the original. I never knew for four months after that day how very far I had "missed" reading that page. After Maguire and I had compared what we had taken down with it as it appeared in the *Ledger*, we had no more to say about our ability to read anything from a Choctaw's to a Beckman street lawyer's writing. We were very quiet after that. Here is the original page: "friends. Her magnectic sway over these marvelous, unaccountable women who had known her but a day, revealed to her the most jealously guarded secrets of their lives, seeking her sympathy and counsel thereon, and were themselves annoyed at having"

* * * * * *

I haven't seen Maguire since, but I have often thought of that incident. It has fastened itself to my memory with hooks of steel. This is a scandalous fact, believe it or not."

A study and comparison of the ocean temperature records of the Challenger exploring expedition have shown Dr. James Croll that the surface of the Atlantic must be lower at the equator than farther north, the maximum height of the north Atlantic being reached between the fortieth and fiftieth degrees of latitude. This difference is due to the difference in the specific gravity of the water. In the latitude of Havana the Atlantic's surface must be two and one-fourth feet higher than at the equator, and in that of Chesapeak Bay the difference is a foot greater.

CALIFORNIA DAY,

Thursday, May 7th.

The WORLD'S EXPOSITION

The above day has been designated by official action for the reception of the representatives of the Government, and of the inhabitants *en masse* of the State of California.

Most interesting ceremonies will take place and a most enjoyable occasion is assured.

To enable Californians to attend on this SPECIAL STATE DAY, the railroads have agreed to make the lowest rate ever heretofore given.

Form your parties, make up your excursions and apply to the local railroad agents, and the lowest possible limited excursion rate can be readily secured.

The opportunity of a lifetime is given all to see the GREATEST INDUSTRIAL EXPOSITION the world has ever seen.

Good and ample accommodation at reasonable rates are assured.

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk, until Tuesday, the 5th day of May 1885, at 12 o'clock M., for the boarding of Inyo county prisoners for the term of one year beginning May 1, 1885, and ending May 1, 1886. Said bids to designate the price per diem for each prisoner, and said bills to be paid by warrants drawn upon the General Fund of said County on bills duly sworn to at the regular meetings of the Board on presentation of bills. Proposals must be endorsed "Proposals for Boarding County Prisoners," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on said 5th day of May, 1885, and the right is reserved to reject any and all bids.

By order of the Board of Supervisors.

PROPOSITIONS FOR THE CARE OF INDIGENT SICK OF INYO COUNTY

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county at the office of the County Clerk until 12 o'clock M., on Tuesday the 5th day of May, 1885, to contract for the care of said indigent sick, for the term of one year from May 1, 1885. Said bids to designate the amount for which parties contracting will care for said indigent sick on a basis of four patients throughout the year, and to include all medicine, medical attendance, nursing, board, lodging and washing, and said medical attendance to be given by a physician having the qualifications prescribed by law. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care. Said contractor to care for all the indigent sick of said county properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for. Said excess to be paid for by extra allowance on presentation of bill duly sworn to at the regular meeting of said Board immediately after said contract has expired; the average of four to be paid for at the regular meetings of the Board on presentation of bills duly sworn to, and all payments to be made by warrants drawn on the Hospital Fund of said County. The person or persons to whom such contract may be awarded shall give a good and sufficient bond in double the amount of such contract price for the faithful performance of said contract. The care and management of said indigent sick by such contractors shall be at any and all times subject to the inspection of said Board of Supervisors, or any member thereof, or by any person appointed by the said Board for such purpose. Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on the said 5th day of May, 1885. And the right is reserved to reject any all bids.

By order of the Board of Supervisors.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, APRIL 18.....1885

—Jack wants to know if the cows come home regularly now.

—Major Kilgore is experting on mines in Death valley, in this county.

—Light shower last Monday; for even small favors let us be thankful.

—Flocks of sandhill cranes have been hovering over the valley during the past week.

—Work has been resumed at the Princess mine, Candelaria. Twelve men are employed in the mine.

—The pay rolls for March of the principal mining enterprises on the Comstock amounted to $91,246.

—During the past two weeks the locust trees, all filled with their snowy flowers, have filled the air with their fragrance.

—Keep out of the wood pile, when a shot gun is aimed it might go off, and the holder would not say "I did'nt know it was loaded."

—Strawberries will be abundant at Independence, the vines have made a great growth, and are as full of young fruit as they can stick.

—Last week J. C. Eddy made a shipment of gold bullion from the mill in Snow Canyon. The "brick" was worth three thousand dollars.

—A liniment of equal parts of oil of wintergreen and olive oil, or soap liniment, is said to afford almost instant relief from pain in acute rheumatism.

—The trouble between England and Russia, that seemed to be in a fair way of settlement, has again broken out, and it seems as if war cannot be averted.

—A few days ago E. Robinson received from San Francisco a handsome new family carriage. It is a pleasure to see evidence of prosperity among ones neighbors.

—Prunes promise to be a fine crop; the trees are heavily loaded. Apple and pear trees have heavy crops; the young fruit is now about the size of cherries and growing rapidly.

—Surveyor Seely was busy making metes and bounds in the neighborhood of Bishop Creek most of last week and beginning of this. He got back to Independence last Wednesday.

—Sheriff McGee deserves praise for his energy and vigilance in trying to put an end to the crime of selling whiskey to Indians. When John starts in he never lets up till he gets his man.

—Peach trees are so heavily loaded, and the fruit has grown so rapidly during the past week, that the limbs are already bending down, and orchardists are at work chopping off large quanities of the young peaches.

—H. P. Cartier has moved into his new house; it is a neat and comfortable residence, far too good for a bachelor. No single man should be permitted to own such a home; Cartier should be forced to take a wife to keep him and it in order.

—The flower yard of Mrs. Conklin is just lovely now; the variety and beauty of her roses would be hard to excel. The vines are covered with roses of the choicest kinds, and their exquisite colors and delicate perfumes are most delightful. Many other kinds of beautiful flowers are in full bloom.

—In most sections of the state apricots are a failure this season. In Owens valley the present prospect is better than ever before for a heavy crop. The fruit may bring a good price, and owners of trees will do well to do all they can, in the way of taking care that no injury is done the young fruit through neglect to guard against insect pests.

—Osage orange plants, set out by Mr. Conklin around his orchard about two years ago, are growing finely, and in a few years more will make a very effective and handsome fence. The beauty of rural scenes in England is done mainly to the green and neatly trimmed hedge rows. Where the osage orange does well, as handsome hedges may be made as in England. Plant osage around your orchards and have use and beauty too.

SOLD.—The Panamint mining property was sold by the Sheriff of Inyo county in front of the Court House at Independence, last Monday, in accordance with due notice previously given.

MAN KILLED.—A man named Stephen Walsh was killed by falling into a pan in Millner's mill at Benton, on Friday of last week. He was a native of Ireland, aged about forty-five years.

HEAD CUT.—Last Saturday while some children were at play, a daughter of Mrs. Annie Brown threw a stone that hit her little sister on the head, making a gash so deep that a physician had to put several stitches in the wound. The little one is now doing well.

A TOUCH OF OLD TIMES.—Last Saturday evening the people of Independence had a reminder of the moving times of '72. About eight o'clock there was a shock of earthquake; it was a slight tremor and did no damage beyond scaring those who felt the big shake in the year named.

WHAT IT WOULD DO.—Should the soda operations at Owens Lake prove successful it will utilize a material now useless, give work to laboring men and mechanics, make a market for home products and add considerably to the wealth of the County. It would build up quite a town at Keeler, and hurt nobody.

Our Opportunity.

The brilliant success of California in gaining the chief prize for oranges and lemons at the New Orleans Exposition, will be of incalculable benefit to the State. This triumph is a very forcible illustration of the wisdom of making such displays; in no other way could the resources of our State have been brought so prominently to the public notice.

The Nevada State Fair at Reno next Fall will afford Inyo county a chance to make a display of productions, agricultural and mineral, that will attract the attention of those able and willing to help develop our vast, but now neglected resources. The C. & C. railroad management will carry to Reno and back all farm produce (and doubtless mineral exhibits also) intended for exhibition at the Fair, and not charge one cent for freight either way. Surely the people of Inyo will not fail to avail themselves of this most liberal offer. Should exhibitors sell their goods at the Fair, probably the Railroad Company would ask to be paid half rates for carrying the same, but, as already stated, not a cent for freight would be charged on unsold goods.

Darwin Correspondence.

A Darwin correspondent writes: Wednesday of last week, Gorman and McKenzie had their furnace in full blast. They have over two hundred tons of ore at the furnace that will go from 147 to 218 ounces silver per ton. Frank Fitzgerald was about ready to start at the same time, with a better prospect than on his previous run.

The property at Panamint is in a fair way to be started up.

J. C. Eddy has just cleaned up after a fifteen days run. The result is entirely satisfactory.

The Riley property, in the hands of Harris & Rhine, will prove a blessing to the surrounding country.

The Wild Rose District is booming, and everything looks fair for a good season in this part of Inyo. Yours,

SUBSCRIBER.

Agreeable To Everybody.

Col. Robert G. King, for ten years Deputy Collector Internal Revenue, Baltimore, Maryland, writes: I endorse the Red Star Cough Cure. I have used it in my family for a violent cough and found it excellent. Its use was entirely free from the depressing effects of other remedies. It can readily be taken, and agrees with and benefits everybody suffering from throat and lung troubles. The relief is permanent, and there is no reaction.

SIGNAL SERVICE REPORT.—War Department, Signal Service, U. S. A., at Keeler, Inyo county, Cal. Meteorological Summary for March, 1885. Mean monthly barometer, 26.378; mean monthly temperature, 54.3; highest temperature; 73; lowest temperature, 33.6; mean monthly humidity, 54.6 per cent.; prevailing wind, southwest; Total rainfall, .12 inches; number of rainy days, 3; number of clear days, 17; number of cloudy days, 1; number of fair days, 13; maximum velocity of wind 36 miles per hour. JNO. GROVER, Signal Corps, U. S. Army.

AN IMPOSTER.—In 1880 a man came to Independence and asked assistance from the Masonic Lodge. It was given him and he was generously cared for. During his stay he got a list of the names of members of the Lodge here, and ever since he has been roaming all over the country, visiting other Lodges. At various times and places he has assumed the names of Robert Love, R. W. Ford, William Walker, Frank Shaw, Thomas Parker, A. N. Bell and other members of Inyo Lodge No. 221, F. & A. M. Lately this fellow has been heard of in the far East, still practicing the same deception. The man is now aged 55 to 60 years, of medium height and weight, gray haired, walks with a slight limp and has a smooth address. Officers of Masonic Lodges and the brethren generally, should beware of this swindling imposter.

RUN OVER AND KILLED.—A young man named James Heenan was run over and killed near Candelaria last week. The *True Fissure* says he was driving a team on Sunday and engaged hauling ore from the Silver Boy mine, situated about two and one-half miles southeast of town. On his return trip that day with a load, he fell off the seat of the wagon. The front wheel passed across his breast and the lower part of his neck, causing fatal injuries from which he died at noon on the following day. He had lain in the road nearly five hours after the accident, and was found about three miles out on the Columbus road. Doctor Anderson was one of the party which went to his assistance and did every thing possible to relieve his sufferings, but he was so badly hurt that he died from internal hemorrhage. He was about twenty-seven years of age and has relatives living at Rochester, New York.

THEY ALL COME BACK.—W. K. Miller has returned to his home at Cottonwood after an absence of some months in Pennsylvania. Mr. Miller had been gone from his native place twenty-five years; when he returned there last Fall, he was as a stranger in a strange land.

"Many a lad he loved was dead,
And many a lass grown old."

He found his old mother still alive, and hale and hearty, and her tender welcome filled his cup of joy full to overflowing. Mr. Miller found much that was pleasant in social life in Pennsylvania, but after a few weeks enjoyment the novelty wore off. Close economy has to be practiced in those older States, and to one used to the liberal, easy ways of California, that soon becomes irksome. Then the rigors of the seasons there are so severe as to be altogether intolerable to one used to the climate of Inyo sounty. Mr. Miller left his two children with his mother, who will come very near filling the place of their own.

Mining Items,

County Clerk Hunter was up to the White Hill mine last Wednesday. He says it is the best poor man's mine he has seen in many a day. There was then thirty-five tons of ore on the dump and more being added every day. Like every one else Mr. Hunter regrets that such fine ore should have to be sent to San Francisco for smelting. The ruin of the furnace at Elna has left Owens Valley without any facility for smelting ore, and now that the supply of good ore appears to be better assured than ever before, the want of such facility is all the more keenly felt. Parties have lately tried to get the use of the furnace at Swansea, but there appears to be a bad case of dog in the manger there.

From the Jim mine at Darwin Gorman and McKenzie are taking out a good deal of fine ore; it goes 87 ounces per ton in silver, and forty per cent lead. The same parties have recently bought the Champion mine, adjoining the Jim.

The Maxim mill is about ready to be started up. Mr. Stansfield has several hundred tons of ore at the mill, and plenty more available; he has persevered in the face of many difficulties, and fully deserves a rich success.

Peter Laird and Jim Moraty are prospecting a claim recently located by them, and adjoining the claim of Freeman and Coats west of Bishop Creek.

SUPERINTENDENT'S REPORT.—Office of Supt. Modock Con. Mining Co., Lookout, April 8, 1885. J. W. Pew, Sec. *Dear Sir:*—The northwest drift and stope (Winze South Lookout) is producing six car loads of ore daily. Car samples give 69 ounces silver and $18.40 gold per ton. Southeast drift looks promising, with some bunches of very high grade ore. The old stopes, 110 foot level, are looking and doing well. Have put on six additional men; total force, eleven men. Will start furnace on 10th of May or before if coal is delivered on time. Yours Truly,

FRANK FITZGERALD, Lessee.

Personal Mention.

Norman Conklin returned home last Wednesday; everybody glad to see him.

John S. Gorman has been at home all of the week, he will return to Darwin on Monday.

Mr. T. Boland was on the down train for Keeler last Monday evening. He went from Los Angeles to San Francisco

Andrew S. Jordan, and old resident of Tuolumne county, died recently while at his birth place in Tennessee. He was aged sixty years.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to

A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

CAUGHT IN THE ACT.—Last Wednesday Sheriff McGee caught Henry Davis in the act of selling whiskey to an Indian. Davis was at once arrested, and taken before C. Mulholland Justice of Peace, and was fined fifty five dollars, or an equal number of days in jail. The fine is very likely to be paid.

ESTATE SETTLED.—In the matter of the Estate of J. F. Epperson, deceased, by an order made in the Superior Court about ten days ago, all property, real and personal, was assigned for the use and benefit of the widow and children and the estate closed. It will be quite useless for any one to present any more bills against the estate, as there is no property in the hands of the Administratrix liable for the payment of such bills.

LEGAL.

FINAL HOMESTEAD PROOF.

No. 238.

LAND OFFICE AT BODIE, CAL., Apr. 13 1885

NOTICE IS HEREBY GIVEN THAT THE following-named settler, has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Honorable Superior Judge of Inyo County, California, or in his absence before the Clerk of said Court, at his office, at Independence, California, on TUESDAY May 26, 1885, viz: Raphael Diaz, for the S ½ of S E ¼, sec. 4, & N ½ of N E ¼ Sec 9, Tp 16 S. PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of F. H. Uhlemeyer, deceased.

NOTICE IS HEREBY GIVEN, THAT MONday, the 20th day of April, 1885, at 10 o'clock A. M. of said day, at the Court Room of said Court, at the Court House in the County of Inyo, has been appointed as the time and place for proving the Will of said F. H. Uhlemeyer, deceased, and for hearing the application of William H. Uhlemeyer, for the issuance to him of letters testementary thereon, when and where any person interested may appear and contest the same.

Dated March 27, 1885

W. L. HUNTER, Clerk,
By THOS. CROUGH, Deput Clerk.

SHERIFF SALE.

BY VIRTUE OF AN EXECUTION ISSUED out of the Superior Court in and for the City and County of San Francisco, Department No. 6, State of California, in the suit of the Carson and Colorado Railroad Company, (a corporation) Plaintiff, against the Owens River Mining and Smelting Company, (a corporation) Defendant, upon a judgment rendered in said court on the sixth day of January, A. D. 1885, for the sum of fourteen hundred and fifty-two 50-100 dollars, besides costs amounting to the sum of fourteen dollars, duly attested the sixteenth daay of March, A. D. 1885, whereby I am commanded to make the amount of $1466.50, besides accruing costs and interest I have levied upon all the right title and interest of the said defendant in and to the following described real property, to wit:

All that certain mine or mining claim known as the Montezuma mine, being 1500 feet in length by 600 in width; Also, all that certain mine known as the California mine, being 1500 feet in length by 600 feet in width; Also, that certain spring of water known as the Montezuma spring, for further description of said property reference is here made to book "N" of Deeds, page 529, Records of Inyo County; Also, all that certain mill site situated southerly from the town of Big Pine on the east side of Owens river, known as the Elna mill site, together with all the buildings, furnaces, machinery, boarding house and all improvements on or near said mill site, with the appurtenances; all the above described property being situated in the Union Mining District, County of Inyo, State of California.

NOTICE IS HEREBY GIVEN, that on

Monday, the 27th day of April, A. D. 1885

between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m. of that day, in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the Owens River Mining and Smelting Company, (a corporation) in and to the above described property, or so much thereof as may be sufficient to satisfy said judgment and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States.

Sheriff's Office, Inyo County, California, April 3d, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-sheriff.

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNty of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 20th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3,820.09, upon which there has been paid the sum of $3293 leaving a balance of $527.09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527.09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five.

W. L. HUNTER, Clerk.
(SEAL)
REDDY & CONKLIN, Attorneys for Plaintiff.

OFFICIAL.

GUARDIAN'S PUBLIC SALE OF REAL ESTATE.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court in and for the County of Inyo, State of California, made on the 27th day of March, 1885, in the matter of the guardianship of the person and estate of Jeannette Lewis, a minor, the undersigned, the Guardian of said minor, will sell at public auction, to the highest bidder, for cash and subject to confirmation by said Superior Court, on Monday, the 20th day of April, 1885, at one o'clock P. M. at the front door of the Court House, Independence, in the County Inyo, all the right, title, interest and estate of the said Jeannette Lewis in and to all those certain lots, pieces, or parcels of land situate, lying and being in the said County of Inyo, State of California, and bounded and described as follows, to wit: Being an undivided two ninths interest, which is entire interest in and to the southwest quarter of Section number twelve, and the north half of the north west quarter of Section number thirteen, all in township number seven south of range number thirty-two east, base and meridian Mount Diablo.

TERMS and condition of sale: Cash and ten per cent. of the purchase money to be paid to the Guardian on the day of sale, balance on confirmation of sale by said Superior Court. Deed at expense of purchaser.

W. R TIBBITS,
Guardian of the person and estate of Jeannette Lewis, a minor. March 28, 1885.
42-45

FINAL HOMESTEAD PROOF.

No. 434.

LAND OFFICE AT BODIE, CAL., March 23. 1885.

NOTICE IS HEREBY GIVEN THAT THE following named settler has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Superior Judge of Inyo County, or in his absence before the Clerk of his Court, at Independence, Cal., on Tuesday, May 5, 1885, viz.: E. H. Blake, for the E ½ of N W ¼ and W ½ of N E ¼, Sec. 33, Tp. 9 S, R 34 E, M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: P. McMurry John Mullane, J. W. Smith and J. B. Stewart, all of Big Pine, Inyo Co. Cal.

42 td D. WALKER, Register.

NOTICE OF ASSESSMENT.

BISHOP CREEK DITCH COMPANY. LOCAtion of Principal place of business, Bishop Creek Inyo county, California.

Notice is hereby given that at a meeting of the Board of Trustees held on the 14th day of February, 1885, an assessment of Two Dollars on the Northern Division and Fifteen Dollars on the Southern Division per share was levied upon the capital stock of the Corporation, payable immediately to the Secretary, at Bishop Creek.

Any stock on which the Assessment shall remain unpaid on the First day of April, 1885, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on the Eighteenth day of April, 1885, to pay the delinquent Assessment, together with the cost of advertising and expenses of sale.

L. A. JAMES, Sec.
36 Bishop Creek, Inyo county, Cal.

INDEPENDENCE, CAL.:

SATURDAY, APRIL 18 1885

All Sorts.

Straight whiskies make crooked roads.

A real case of bray-in and muscle is seen in the mule.

Motto for the cremationists—Death is real, and death is urnest.

A lynching might be called an outburst of riot-ous indignation.

Made of awl work—a pair of shoes. When not made by machinery.

What's in a name? About the hottest country on the globe is Chili.

Young men now have an opportunity to go West and snow up with the country.

The backbone of winter is not yet broken, but it has experienced several "cold snaps."

"A fellow Phelan makes us wondrous kind," remarked O'Donovan Rossa; "two of a kind, in fact."

What is the rate of interest when distance lends enchantment to the view? Hardly one present.

Some one wants to know how to deaden the sound of a piano. One good plan would be to kill the player.

A book criticism: "This book is printed on wretched paper. What a pity to waste paper in that way."

What is a luxury? asks an exchange. A luxury is something you don't want until you see somebody else with it.

One good combination dog, if kept in an alley way between yards, can do the barking for two houses at night.

"Vesta"—We would like to explain why a woman who tells fortunes by means of cups should be called a sauceress. But we can't.

"Remember the porter," said the hotel highwayman to the departing guest. "I shall," said the other: "it was worse than the ale."

A Cincinnati man claims to have a wife so hot-tempered that he can light his cigar from the flash of her eyes. He made a good match when he married her.

"A penny for your thoughts, Mr. Slim." "I was thinking of nothing, Miss Carrie." "Well, that's just like all you men." And then he wondered what she meant.

A close observer has come to the conclusion that if there is anything under the sky at sight of which the gods weep it is to see a woman trying to do up a package.

"Yes," he said, dropping into a chair, "Clara loves me, I am sure. I tried to kiss her to-night at the hall door, but she got very indignant."

"That doesn't look as if she loved you," said his chum.

"Oh, yes it does. She called me a rascal."

"How strange Mr. McSwilligen must look without a mouth, remarked Mrs. Podsnap to Mrs. McS.

"No mouth!" replied Mrs. McSwilligen. "What do you mean?"

"Why, Mr. Podsnap said last night that Mr. McSwilligen had shot off his mouth at the club."

"Your honor, I am summoned to serve on the grand jury, but I wish you would excuse me." "What is your business, sir?" "I am a coal merchant, your Honor, and very busy this weather." "You are excused, sir, on the ground that it would be impossible for a coal merchant to weigh a matter properly and find a true bill."

Young Lawyer—A mind reader? Explain what you mean by that term? Mr. Brown—I can read a man's mind—his thoughts—like a printed page. Young Lawyer—Ah! Indeed! Let's see if you can tell what I'm thinking of. Please read my mind, if you can, Mr. Brown. Mr. Brown—Thank you; I never read a legal blank. I'm a mind reader.

Back from the Joyful Beyond.

On Monday morning John Wisholm, of Newport, Pa., was taken suddenly ill, and before a physician could be summoned he died. His form was cold and rigid, the lower jaw fallen, and the ashy pallor of death on his face. The eldest son was very demonstrative in his grief, and called repeatedly on his father to come back. As though the agonized voice had penetrated the silence of the other world, the lips of the father moved; the eyes opened and cast a sad, reproachful glance on his weeping son, and in the well-known voice came distinctly these words:

"Oh, why did you call me back?"

Restoratives were administered to the patient, and Tuesday he related his experience up to the time he was apparently recalled to life. When he died he felt a sinking sensation, but knew everything that went on in the room. Then he was led by two invisible forms moving as though floating in the air. He experienced a feeling of perfect peace and heard the most soothing and delightful music. He felt a thrill of regret, and all became black, and he seemed to be back in the old pain-racked body again, and, opening his eyes, he found his son and family crying.

Mr. Wisholm lived until Tuesday, and then died, as his family seriously believe, a second time. For twenty-four hours, in the opinion of the doctor and the family, and as far as outward indications are a guide, the man was dead. The funeral took place Thursday.

"Mah! mah!" excitedly exclaimed young Johnny Jarphly to his unwhiskered parent. "Don't scream so, Johnnie," remonstrated his mother. "What is it?" "Why, just listen to this I'm reading, will you. 'Short hair is being more and more worn and switches are going out of use.'" "Well!" "That's in the 'Fashion Column.'" "What if it is?" "What if is it? You like to keep up with the fashion, don't you?" And there was a shade of disappointment in his voice.

Genius Dissatisfied.

Mozart once tried to play a difficult piece of music before an audience at sight, and failed. Mendelsshon used to play the most difficult works without a book, and his admirers asserted that he could perform a perfect piece of music out of his head. But he was too conscientious to claim such a powerful extemporization. "How did you ever achieve all this?" asked a listener, on hearing him play several of his own compositions without the score.

"I lived like a hermit and worked like a horse," anewered the great musician, too honest to affect an excellence that cost him nothing.

The man who stands on the highest peak is the most ready to confess that he has came up step by step, climbing with both hands and feet. Only he who rests on a hillock speaks of having "run up merely to stretch my limbs, you know."

Now and then there is found a man of unquestioned ability who is a victim of the silly affectation which would appear to succeed without labor. We have heard of a smart student whose recitations were the talk of the college. Yet he was seldom seen reading a text-book, and was always ready to play, talk or stroll. His class mates were proud to be associated with a "genius," who knew "Euclid" as Newton did, by intuition, and could read the classics at sight, as Parson used to.

But one night an accident exposed the "genius." Some skylarking students broke into his room, thinking to find him in bed. They found him under the bed, studying by a shaded lamp. The curtains were down, and every precaution had been taken to prevent the light of the midnight oil from shining too far. The idol was toppled off its pedestal, and the angry worshippers gnashed their teeth at the "genius" who worked in the darkness that he might shine in the light.

A great man's standard is always higher than himself, and he labors harder to satisfy himself than to please his audience. Ruskin's critics have written bitter things against his thoughts and style. But no one of them has approached the severity with which this modern prophet criticises himself in the re-issue of the second volume of his "Modern Painters."

Thorwaldsen, the Dane, is reputed to be the greatest sculptor since the days that the genius of Greece ceased to express itself. One day a gentleman called upon the sculptor, and found him glowing with energy, modelling a statue.

"I have an idea," said Thorwaldsen. "I have work in my head which will be worthy to live. I worked all last evening, till at my usual hour I went to bed. But my idea would not let me rest.

"I was forced to get up. I struck a light and worked for three hours, after which I again went to bed. But again I could not rest; again I was forced to get up, and have been working ever since. If I can but execute my idea, it will be a glorious statue."

The statue—Mercury drawing his sword just after he had played Argus to sleep—is said to be the finest creation of this great sculptor. Yet he himself did not think it came up to the work he had in his head.

The man of genius is severe on his own execution because his conception of the idea transcends his power of expressing it. But the man who has nothing but talent views with satisfaction what he has done—there is little difficulty in expressing his ideas.

The great composer, or sculptor, or painter, or orator is alarmed when he discovers that he is satisfied with his execution. He looks upon the feeling as a symptom that his genius is waning, and will no longer suggest to him ideas beyond his power to express.

"Has anything distressed you?" asked a friend, finding Thorwaldsen one day in low spirits.

"Yes," replied the sculptor, in a mournful tone. "My genius is decaying."

"What do you mean?" exclaimed the astonished friend.

"Why," answered Thorwaldsen, his face growing sadder, "here's my statue of Christ; it is the first of my works that I have ever felt satisfied with. Till now my idea has always been far beyond what I could execute. But it is no longer so. I shall never have a great idea again."

And he never did.

The author who is as much pleased with the reading of his book as he was with its composition, is losing his ability to think broadly and to write clearly. The ascending poet turns from his poem because it is but the shadow of what stood before his mind.

Discontent is both the burden and the stimulant of genius. The open vision never finds form, or color, or word adequate to express it.

"God alone," says Julius Hare, "could look down on his creation, and behold all that was very good."

Lord Bacon, making a devotional use of this contrast, prays:

"Thou, after Thou didst turn to behold the works which Thy hands had made, saw that were all very good, and didst rest.

"But man, turning to the works which our own hands have made, see there altogether vanity and vexation of spirit, and can not rest.

"Wherefore, if we labor in Thy works, make us to share in Thy vision and in Thy rest!"

Hawthorne and the Fly.

A fly is the most impertinent and indelicate thing in creation—the very type and moral of human spirits whom one occasionally meets with, and who, perhaps, after an existence, troublesome and vexatious to all with whom they come in contact, have been doomed to reappear in this congenial shape. Here is one intent upon alligating on my nose. In a room now—in a human habitation—I could find in my conscience to put him to death; but here we have intruded upon his own domain, which he holds in common with all the children of earth and air, and we have no right to slay him on his own ground.

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST."—Planned by HORACE GREELEY, LL.D.

All our great institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown University, Cornell University, Amherst, Dartmouth, Rutgers, Williams, University of California, etc. The Astor Library, our greatest school, a share declared it to be THE BEST. It is not only the BEST CYCLOPÆDIA, but is a whole library of UNIVERSAL KNOWLEDGE from the pens of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles. From Hon. A. R. Spofford, Librarian of Congress, Washington, D. C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the Library of Congress to answer more questions satisfactorily than any other work of reference." "Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL.D. "Very far the best," etc.—Hon. Alexander H. Stephens, LL.D. "The best we have," etc.—Hon. Wendell Phillips, LL.D.

A Solitary Senate.

In 1866 previous to the passage of the reconstruction act, the legislature of Arkansaw assembled in what became known as the rebel session. Expecting trouble, the "rebel session" adjourned in March with a view of meeting again the first of May. In the meantime, General Ord received instructions to prohibit the reassembling of the men who, under the constitution of the United States, had no right to enact laws. Nearly all of the members yielded to the military mandamus, but a few headstrong statesmen, knowing that the country demanded their services, convened upon the arrival of the proper time. The state house was surrounded by soldiers, but the determined legislature met in General Newton's law office. John R. Fellows, now a prominent lawyer of New York and assistant district attorney of that city, was the only senator present. Entering the little room set apart for the senate, Mr. Fellows took his place behind a desk, struck the board with a horseshoe and said:

"The Senate will come to order. As the chaplain is not present, Mr. Fellows, you will please offer a prayer."

Then Mr. Fellows prayed.

"Mr. Fellows," said Mr. Fellows, "will you please act as sergeant-at-arms?"

"Yes, sir," answering himself.

"As the secretary is not present, Mr. Fellows, you will also have to discharge the duties of that officer."

"All right, sir."

"Read the proceedings of the last day's session."

Mr. Fellows read and then moved that the journal stand approved.

"Any objections, gentlemen?"

There being no objections, the journal was approved.

"Mr. President," said Mr. Fellows, "I see that the janitor is not present. We need a bucket of fresh water."

"Mr. Fellows," said Mr. Fellows, "I will appoint you to discharge the duties of janitor."

Mr. Fellows brought a bucket of water.

"Now, gentlemen, we are ready for business."

Just then some one looked in and said, "Come on, John, and let's get a drink."

"Second the motion," said Mr. Fellows, and then turning with the gravity for which he is noted, continued:

"It is moved and seconded that the senate adjourn and take a drink. All in favor of the motion will say aye."

"Aye!"

"Contrary, no."

"The ayes have it and the senate will adjourn."

A few moments later the senate was again called to order and the transaction of business begun in regular form.

The commander of the post hearing that that the legislature had met in violation of his orders, sent a file of soldiers with orders to arrest the members and to bring them to headquarters. The lower house, consisting of five members, had adjourned when the soldiers arrived, but the senate was still in session, deep in a discussion pending the passage of a bill amending the revenue laws of the state. Mr. Fellows was arrested and taken before General Ord.

"Who are you, sir?" asked the general.

"The Senate of Arkansaw."

"A member of the rebel legislature, eh? Captain," addressing an officer, "where are the other members?"

"This was the only one we found, general. He had assembled and organized himself into the senate, and was discussing a bill when we arrested him."

"Have you got the bill?"

"Yes, sir, here it is," producing the document.

The general, after reading the bill, said: "A very good idea, Mr. Senate. Now, sir, what is your opinion; do you think it would have passed?"

"I think that its chances were good," replied Mr. Fellows.

"You are no doubt a wise legislator. By the way, Mr. Senate, do you ever drink anything."

Mr. Fellows said that his most intimate friends had known him to drink.

"Captain," continued the general, "pull out that jug. Drink, sir, and then we will go down and pass the bill."

Several years afterwards, when reconstruction had been affected, Fellows' bill was taken up, passed without trouble, and is now a law.

To P. Wales' Son.

DEAR SIR—Learning casually that you are soon to become of age and also to visit America, the hot-bed of freedom and barbaric splendor, I take my pen in hand to ask you to be my guest next summer, during the pickeral season, at Hudson on the beautiful St. Croix, and to tender you the freedom of my double-barreled shotgun during the prairie chicken holocaust at my home.

I have made the pickerel and prairie hen a study for many years and I am quite familiar with their habits. With me, therefore, you will be perfectly safe.

You will be surprised on reaching the United States, no doubt, to find a large number of young men who will claim that they are Englishmen of noble birth. Most of these, however, are base imitations. Do not loan them money on any account. They are, generally speaking, young men whose brains are adulterated and who have left their purses at home on the piano. They will probably offer to introduce you to good society in America, but you will do well to evade them. They will wind up by asking you to loan them $100 temporarily.

You will do well to tie to the people who talk what is known as United States language, and whose clothes do not fit them too soon. We are plain people here, trying to do right in our weak and feeble way, and we will make it as cheerful for you as possible. Your being a crowned head will not prevent you having a good time, so far as we are concerned. You are not to blame for being a crowned head. This is the land of liberty, and we believe in being hospital and courteous to all foreigners. It may be well for you to be naturalized as soon as possible after your arrival in New York if you wish to enter the best political circles; but, so far as the literati is concerned, we shall not require it. Your political opinions will not be pried into by us. You will be perfectly welcome to such ideas in this respect as you may have brought with you and paid duty on.

You will find in America a certain air of savage refinement which will, no doubt, surprise you at first, and you will wonder how we got it. This, however, you will find chiefly in the larger cities. You will not find it where I am. I never allow refinement to interfere with my fun and crush out my young life. Fly to me when you get weary of social twaddle and frills. When you swallow-tail coat gets too binding under the arms, come out to the broad and boundless west and we will put on our old clothes and enjoy ourselves. I know where the angle worm grows rankest and the wild hen hatches her young. You can roll up an old pair of my pantaloons about three feet and wear them if you will be careful of them.

Come among us, and if you like the country, you may want to stay. Deacon Bullard of the Northwestern road, writes me that he would be tickled to death to locate you on a homestead claim only a little way from Fort Pierce. He would be like a father to you. He would help you to find a good claim, and he would show you how to play "high low jack." Deacon Bullard is highly accomplished.

If you come west I am sure you will like us We are not cold and haughty, as you may have supposed. We are easy to get acquainted with and sociable in the extreme. If a foreigner comes among us and aims to do what is right, we feel like giving him a chance.

Perhaps it would be well for you to come to my house at once, and I will give you some valuable points on American society so that you will feel perfectly at home in our best circles. Of course, you do not want anything that would seem outre and bon voyage. I can tell you in twenty minutes, so that you can go into the best society and not attract attention.

Remember me kindly to your parents and your grandmother, for whom I entertain the highest regard. Tell them that I hope to write to them soon, and my delay so far has not been through any coldness on my part, but rather on account of press of other business. With the literary work I have to do this winter, I cannot keep up my correspondence with foreign powers. The fact is that the royal family is spreading so that I've got to neglect some of its members or hire a man.

The toboggan slide is a steep inclined plane, built of wood, and covered with ice. Down this plane the toboggan shoots at a speed of three times that of the old fashioned sled. The sides of the track are guarded in such a way that the toboggan cannot leave it, and stairs are built by its side so that the ascent can be made with comparative ease. As it is the correct Canadian thing to toboggan at night, the track is illuminated with torches, and the sport is held to be refined by its separation from the prosaic light of day. Already a toboggan slide has been constructed at Saratoga, and by next winter the country will be covered with toboggan slides. Every man will be glad to renew in an improved form the early delights of sliding down hill, and every girl will long to take part in the now fashionable and exhilarating sport. Ministers need no longer preach against roller skating. The rink has had its day, and its new rival, the tobaggan slide, will ruin the roller skate trade. Tobogganing is the sport of the future, and it will be useless for any man to try and resist it.

Women to go Into the Poultry Business.

Who can tell how long ago it was that the agricultural, political and religious press began to advise women to go into the poultry business? This advice comes in bunches, like asparagus. For a long time there will be none in the market, and then suddenly some editor will break out in rhapsodies over a lone widow who has kept seven hens through a hard winter on a pint of corn, sold $815 worth of eggs, paid off a mortgage on her little cottage, and sent her eldest boy through college. This story will have the run of the press for a season, and be printed from Dan to Beersheba, and from Maine to California. Then some other venerable liar, rusting away in an off political year, will reel off one or two articles about the pleasure of keeping hens, and the enormous profit. We do not deny that money can be made out of poultry, but it requires the strongest mental balance, and the most vigorous constitution to stand it, and it is a business peculiarly unfitted for women. Who has not seen a woman trying to chase a hen out of the flower-bed or garden, and who can deny that all womanly grace, all loveliness and all sweetness of temper disappears in the struggle. And how terrible are the passions aroused in the war of words when the poultry breaks into the sanctity of the neighbor's yard, and the neighbor comes to the back fence to hurl forth his indignation in gusts of rugged eloquence. Strong men have grown gray in an instant on seeing a thoroughbred hen come flying over the fence followed by a string of broken bricks and old tomato cans and profanity longer than her pedigree, and realizing the terrible ordeal to be gone through when the enraged neighbor got his second wind, and came over the fence himself. Oh, no! the poultry business is no place for a woman. Still, about once in three months the press breaks out in a chorus of praise of this nefarious and soul-destroying traffic.

Oh, Shade of Concord, Was It Pie?

* * * always pie at breakfast.
—Holmes' Life of Emerson.

Oh, Shade of Concord, was it pie that rolled they finely frenzied eye in visions of Infinity? That fed thy jack-o'-lantern brain with phosphor from the radiant train that nightly tramps the stellar plain, and clapped the brakes on Phœbus' car one morning in the blue afar to "hitch thy wagon to a star?"

Oh, Shade of Concord, was it pie that kept thee riding in the sky and gave thy soul the vision clear that lighted half our hemisphere with sword-like flashes of a pen that opened wounds it healed again? That, when we saw the owner crave a ransom for th' enfranchised slave, sent this fierce truth down like a glaive—"Aye, fill the bag up to the brim—the slave's the owner—now pay him?" That to the breeze our flag unfurled and "fired the shot heard round the world?" That "worked in sad sincerity," when, builded better than it knew, the "conscious stone to beauty grew?"

Oh, Shade of Concord, was it pie that bore thy soul so loftily? That made thee spare with gentle ruth all sons of men who love the truth, who scorn the sneer and loathe the sham? That filled thee with a noble hate of hypocrites who modulate each sacred chant into their cant and snivel forth each joyous psalm? Prophet and Poet, Fool most wise, we toss this gew-gaw to the skies, and I feel, while blink our dazzled eyes, oh, true American, 'twas Pie!

Beauty Behind the Tea-Pot.

The tea pot simmers in scores of Washington houses every afternoon and tea-drinking is now the popular mania and dissipation. In some houses one member of the family is generally kept busily occupied all the afternoon in making and pouring tea. A pretty woman never looks better than when seated behind a tea-table, set with a shining equipage and rows of dainty cups. English breakfast tea is the fashionable leaf now, and as many of the fair brewers say, there is more pleasure in making than in drinking that herb-flavored stuff. In general the tea is steeped in a small silver pot and made of tripple strength, so that each cup has to be filled up with boiling water from the silver or brass tea-pot that is always steaming over an alcohol lamp in the middle of the table. Some make each cup separately, the dry tea leaves being put in a perforated silver ball pendant from a long chain. The ball is dropped in the cup, boiling water poured in and the tea ball is stirred about until the decoction assumes the right color and strength. This is quite the prettiest way of making tea, and the girls who appreciate the chance for coquetries and tableausx that the rite affords are enamored with the tea ball, providing always that there is some gallant man about to handle the burning silver when it is necessary to empty and refill the ball.

The Beer Drinking Capacity of Nations.

Here are some statistics of the beer drinking capacity of different nations, recently figured out for the benefit of the tectotaler: England comes first with a consumption of 990,000,000 gallons annually, Germany next with 900,000,000 gallons, the United States 600,000,000 gallons and France a long way behind all other counties with a paltry 155,000,000.

The spirit of the press—cider.

Goff's Grit.

In politics, business, love affairs, and private life, the courageous man always wins. Curious that this fact should be brought home to me while I was moving with the steady throng that passes up and down Chestnut street. I met a typical character, a living witness as it were. A young man, not much more than 40 years old, a hero in war and a bluffer in peace. He will probably take exception to this word, but the fact is, that much of the success of this life is made out of a bluff. That is the pushing of the courageous element of our nature. When the war broke out he was a boy and lived in a community where nine-tenths of the citizens were secessionists. His family was rich, his title to respectability good, yet all his people stood by the Union. He drifted into the army before he was 20, and in a fight in Hardy county, in his native State, was captured and sent to Richmond a prisoner. Very soon after his incarceration Major Armsby, who lived in the adjoining county to the one in which his parents dwelt, in Western Virginia, was arrested as a spy. He was tried by a court-martial and sentenced to be shot. The fact being transmitted to the Confederate Government they threw the man of whom I am writing into prison, and notified him that his life would be sacrificed when Major Armsby was executed. The same pleasing intelligence was sent to the Government at Washington. For several months this young man lay in prison in the shadow of death. Delay became monotonous. His powerful relatives in the North sought to save his life by saving that of the Confederate spy. While they were moving in this behalf the youthful Federal soldier wrote a letter which is now on file in the War Department, in which he demanded that the Government should not hesitate in its duty to the spy on account of any sympathy for him. Said he: "A Government has no right to sacrifice a principle even to save the life of an innocent citizen." It was a manly letter and no doubt induced the lion-hearted Stanton to agree to exchange the young Federal officer for the man who had been convicted as a spy. At any rate they were exchanged, one for the other, and both returned to their commands. A year later the Confederate was recaptured and brought as a prisoner-of-war into the town where the Federal soldier lived who had been held as a hostage for him. When this fact was discovered the people were incensed and a mob prepared to lynch the rebel soldier. Twenty-six miles away the man who was once linked to him with peculiar ties was commanding his regiment. As they were dragging him through the streets of the town to a convenient place of execution, the Federal officer arrived upon the train on a visit to his family. He inquired the cause of the commotion and it was told him, whereupon he pushed his way through the excited crowd, and laying his hand upon the shoulder of the Confederate soldier, said. "Let no friend of mine lay violent hands upon this man. He did a soldier's duty and is entitled to the protection that a soldier shall give him." Thus this man's life was saved by the very man who had suffered so much in his behalf. The war closed, both men went back to live in their homes, and now reside in adjoining counties. The Federal soldier soon grew rich and powerful but neither has forgotten their singular allegiance to one another. The man who wore the blue became Secretary of the Navy in the Cabinet of President Hayes, and is now a Member of Congress, while the Confederate plods along in the ordinary walks of life. General Nathan Goff, who was a Brigadier-General soon after he was 21 years of age, is the hero of this singular reminiscence of the war, and is still making his mark upon the history of his time.

One Meal a Day.

Just now when perhaps the cheapening of living expenses is of more importance, temporarily at least, than the most finished statesmanship, the example of a man up in Massachusetts who had been subsisting and performing the average work that farmers in the rocky soil of the Bay State usually perform, on one meal per diem, may be regarded as an interesting exhibit, if not example of what may be accomplished in dieto-economics. As he is said to bear himself with un-Yankeelike slowness at table, the probability is that the weight of food consumed does not amount to more than that furnished to and carried away in a dyspeptic shape by the average individual at the thirty minutes-for-refreshment railroad stations. Yet it is within the possibilities that a man who has evidently devoted so considerable attention to dietaro affairs may have so systematized the habit and necessity as to have built out of them science and art, in which case it is not beyond belief that he has demonstrated that in eating, or in many other things, the truth of the adage "the more haste the less speed" holds pre-eminently true. However, as to the quality it is fair to believe that it is not so large by one-half as what he would have eaten had he continued a thrice-meal-a-day man. His theory was at the outstart that man consumed more food than necessary, and really more than is conducive to health, and he seems to have proven this.

A capital crime—well, kissing is about as good as any of them, if we admit that kissing is a crime.

The Coming Coats.

For full dress the regular "swallow tail" has, of course, the lead, but we are pleased to note that great liberties are being taken with this sedate, time and usher-honored garment. Each of our leading houses has its own pet ideas about the most artistic form. In fact, a divergence of opinion has recently developed which unmistakably illustrates a feeling of decided dissatisfaction with the iron-bound laws which have been so long obeyed in the production of this coat.

The double-breasted frock is as popular as ever. For day dress there is no other style so suitable, and it is also a great favorite for business wear by professional men and others whose business requires them to be particularly well dressed. It is made about the same as last fall, the changes being a lower roll and slightly wider shoulders, with sleeves a trifle larger. The lengths are the same.

Morning coats are made to close with four, three or one button, the four-button form being decidedly the most popular. The features common to these forms are high shoulder seams, moderate waist and full length, moderate width of back at waist, wider shoulders, and larger sleeves than last season, a lower opening than last season and more general ease.

In walking coats a style which will enjoy some favor is made with a waist length of twenty and a full length of thirty-two inches. This coat is but slightly cut away in front, rolls about the same as a morning coat and has rather wider shoulders. Made from check or plaided goods, it is a very attractive garment.

No matter what other styles may be in favor, the sack always enjoys a considerable popularity. For office and business wear, there is no other style so comfortable, convenient and suitable, and for this reason no other can displace the sack in popular favor Besides these advantages, the sack looks well in, and is better adapted to, the more pronounced styles of fabric than any form in the frock. For the coming season, the four-button sack with a light roll, say four inches deep, with the fronts boldly rounded from the lower button, will be the favorite style.

The Fraternal Goat.

In Bucks County is a farmer who has a fine, large shepherd dog. The farmer also has a goat, and this latter animal has often rendered valuable assistance to the shepherd dog in keeping other dogs away from the sheep. Before the goat came parties of dogs used to call on the sheep, and while two of the mutton-hungry dogs would engage the attention of the shepherd dog the other dogs would go for the sheep. But the goat changed all that. Not a cur in the neighborhood would dare to attack the goat, and the famer's sheep have enjoyed an unusual degree of protection.

A few days ago the dog disappeared. The farmer did't worry himself much, for he thought the goat was still at hand. But when he found the goat was gone he became alarmed for the safety of his sheep and search was instituted.

The roads of the neighborhood were explored and the people were asked if they had seen a stray shepherd dog or a stray goat. Most of them had seen neither. Nobody had seen either alone. Along one road every toll-gate or foundry store reported that a dog and a goat had been seen journeying together in the most fraternal manner. One or two people had tried—they said they seen somebody else try—to steal the dog, but the goat had impressed them very strongly with the idea that they must steal him too. The queer pair were inseparable. In the course of a week or ten days they were found in a barn on a farm some six miles distant, where they were apparently happy and contented together. The dog was a handsome one and an effort was made to bring him home alone, but he would not come without his companion. The goat had to be allowed to come home, too.

One Cause of Bad Grammar.

An Ohio school-teacher went over to a country district in Indiana to engraft a little knowledge upon the youthful sprouts in that vicinity, and one of the school trustees used such grammar that the Buckeye pedagogue was threatened with hysterics. After two or three weeks he felt that he knew the trustee well enough to speak to him about it.

"Why is it," he asked "that you persist in saying 'have saw,' 'have came,' 'knowed,' and other things equally as ungrammatical?"

"Because I was teached that way by my parents," replied the trustee.

"But, good heavens, man, you should know better than to continue to murder the English in that style."

"Look here, young man," answered the trustee, hotly, "I've got a right to murder the English."

"No, you haven't."

"I know better. I'd like to know if my grandfather wasn't in the war of '12 and his father fit in the revolution and they both done all they could to murder the English, and I'll be danged if I'm goin' back on the family record. If you don't like it, all you have to do is to scrimmage 'round and git money enough to take you back to Ohio whar you come from. That's the kind of a school trustee this chicken is, and you needn't try to teach him none of your new-fangled notions, or you'll be out of a job quicker'n a Republican postmaster after March 4."

The teacher taught the scholars after that

TRAVELING.

Railroad Time Table.

CARSON & COLORADO R.R.

....TAKING EFFECT....

Thursday, Dec. 4, 1884.

STATIONS.	From Mound House No. 1. Leave—	To Mound House No. 2. Arrives—
Mound House	9:15a. m.	6:00 p. m.
Dayton	9:45 a. m.	5:25 p. m.
Wabuska	12:05 p. m	2:30 p. m.
Hawthorne	3:30 p. m	11:10 a. m.
Lundy	5:15 p. m	10:05 a. m.
Soda Springs	6:20 p. m	9:20 a. m.
Belleville	7:40 p. m.	8:00 a. m.
Candelaria	8:20 p. m.	6:20 a. m.
	No. 3.	No. 4.
Belleville	7:30 a. m.	6:20 p. m.
Benton	11:15 a. m.	2:25 p m.
Bishop Creek	1:00 p m.	12:00 p. m.
Alvord	3:20 p m.	11:20 a. m.
Independence	4:10 p. m	9:30 a m.
Lone Pine	5:40 p. m.	8:40 a. m.
Keeler	5:40 p m.	8:00 a. m.

Trains 1 and 2 run daily.
Train 3 runs Mondays Wednesdays and Fridays
Train 4 runs Tuesdays Thursdays and Saturdays

Passenger trains make close connection at Mound House with express trains of V. & T. R. R., which connect at Reno with east and west-bound trains of Central Pacific Railroad.

Stage Connections:

At HAWTHORNE with United States Stage Company's coaches for Aurora 26 miles); Bodie (37 miles); Lundy and Bridgeport.

At LUNING (125 miles from Mound House) with Gilmer, Salisbury & Co.'s tri weekly stages (leaving Mondays, Wednesdays and Fridays) for Downeyville, Grantsville and Belmont.

At CANDELARIA with U. S. Stage Co.'s stages for Columbus (8 miles), Silver Peak, Montezuma, Alida Valley, Gold Mountain etc.

SATURDAY, APRIL 25 .....1885.

C. Mulholland,
EDITOR & PROPRIETOR.

THE expressed determination of President Cleveland to have a Californian for Minister to China, proves that he clearly understands the question of Chinese immigration, in its relation to the Pacific coast, and means to deal fairly with us in that matter. Mr. Cleveland evidently has plenty of good hard common sense.

THE publisher of the *Agents Herald*, of Phidadelphia, is doing a good work for newspapers, and the public generally. Every dead beat advertiser, and all kinds of shams and humbugs are shown up. The editor of the Herald, Lum Smith, is a terror to the whole brood of swindlers who thrive by misrepresentation and fraud. The Herald should be in every newspaper office: it is of especial value on the Pacific coast, as it gives publishers here information they could not get in any other way.

SEVERAL years ago the Supreme Court of Nevada gave a decision in favor of Riparian rights. Now the same Court has reversed that decision and holds that priority of location carries with it the right to the water, and that Riparian ownership and the common law are no longer applicable Our own Supreme Court now has the same subject under consideration, and it is to be hoped will see it in the same light that the Nevada Court does. Where the conditions are so much alike it is hard to see why opposite decisions should be made.

HUNGER, rags, squalor and misery, are just as prevalent in Ireland now as before the Prince of Wales and his wife visited that wretched country. When the Irish people can have plenty of good food to eat, comfortable garments to wear, and comfortable homes to live in, and can see that these blessings may be had under English rule, then, and then only, will the Irish people be loyal to England, with or without the visits of Princes. The sight of a well fed and well dressed Prince is not very likely to reconcile a man to his condition who is starving, and in rags, and who sees wife and children in the same condition.

THE Press continues to be full of the same kind of unimportant rubbish about General Grant that has been repeated again and again in the past few weeks. He just continues to endure his sufferings with the same fortitude and patience that always were such marked features of his character. There have been no startling changes in his condition for a week past, and it is probable that the progress of the disease has so far reduced his vitality and dulled the sensibility of his nerves, that he does not nor cannot feel much pain. When death comes to General Grant it will be met as calmly as he ever met the dangers of battle.

IT seems as if there must be war between England and Russia. The increasing probabilily of this has caused large orders for various kinds of supplies to be placed in this country; the heaviest orders are on Russian account and the effect will be a very considerable increase in work in the industries affected. A war between Russia and England, by closing the Black Sea grain supply, would give a great impetus to our grain shipments, increasing the freights to American [neutral] shipping, to our shipping and canals. Every branch of trade would feel the effect of this increase in business, and for the moment we should profit by that most dire of evils, a great war.

WITHIN a very recent period there has been an enormous movment of foreign capital for investment in the uncultivated lands of the great central portions of the United States, mostly in the interest of cattle raising on an immense scale to the detriment of small cattle owners, and without any reasonable probability of leading to a reduction in the price of meat for the benefit of the consumer. The profits of such enterprise will inure solely to the benefit of foreign capitalists. The amount of money recently invested in that direction has been estimated at the enormous sum of $100,000,000, and is probably much more and constantly increasing This movement can work only evil to the country, and all means should be tried to stop it. The country occupied by these foreigners as cattle ranges is of very little more value to the United States than when possessed by Indians and bufaloes. The settlement and cultivation of the land is entirely prevented by this movement.

Ruskin says: "In all things throughout the world, the men who look for the crooked will see the crooked, and the men who look for the straight will see the straight." If Mr. Ruskin would only come to America for a year or two and get civilized he would know better than that. Many a free-born American citizen has come to grief because he looked for the straight, and saw nothing better than a bob-tail flush.

Ladies of the Lobby.

The ladies of the lobby, writes a Washington correspondent, are the greatest bores to the average congressman. By this I do not mean the lady lobbyists. There are few purely business lobbyists among the ladies of the capital, and the character abounds more in fiction than in reality. But there are scores of women with claims, women office-seekers, and adventuresses of different kinds who come to the capitol, and the rooms reserved for their reception are always full while congress is in session. The ladies reception room of the house is opposite the north door. It is a long room, with great white marble Corinthian columns running through its center, and with a number of red-cushioned leather chairs and sofas around its walls. When I entered it to-day I found it filled with about forty ladies, some sitting and waiting, and others engaged in talking to congressmen. Some of them were dressed in the finest garments, cut after the latest styles, and there were a number of sealskin cloaks and not a few diamonds. Mourning, however, predominated, and I should judge there were more soldiers' widows after pensions than society women who had come to gossip. I noticed many fresh young girls; on speaking to the polite confederate colonel who had charge of the room, he told me that these, in nine cases out of ten, were young women who wanted places in the departments, and had come to solicit their congressman's influence. Said he: "You have no idea how many office-seekers come here. There are women from all over the country. Many of them are deserving, and, notwithstanding what has been said about it, I have yet to find the first questionable character in this room. If they are bad they do not show it. We have from 100 to 200 ladies in here every day to see congressmen. They must all apply to me, and I send in their cards by a page. Sometimes the members receive them and sometimes not.

"Many of the claimants are meritorious ones, and some of them are very needy. They tell me their pitiful stories, and once in a while we have a scene here. I have seen many acts of congressional kindness in this room. Last year there was a poor old woman who used to come here and send in her card about once a week. The members generally came out to see her and she would tell her story. The few she called out always gave to her, and I have seen two, five and even ten dollar bills go out of their pockets into hers. Congressmen are generally liberal and kind-hearted, and they give freely."

As I leave this room I stop a moment and speak to a doorkeeper I know. He tells me that ladies sometimes try to go into the house while it is in session, and that during the last term one came to his door with blood in her eye and a cowhide whip under her sealskin cloak. She started to go inside, but was gently pulled back. She said a congressman had ill-used her, and she was bound to go in and horsewhip him in the presence of the house. The threat of a policeman restrained her.

A Scientific Boy.

Sir David Brewster was born at Jedburgh, Scotland, December 11, 1781. His father was rector of the grammar school, and a teacher of considerable reputation, whom neighborhood fame characterized as "the best Latin scholar and the quickest temper in Scotland;" but he was kindly withal. It was intended that David should become a minister, and he was sent to the university of Edinburgh, to be educated with a view to that profession, when only twelve years old. His tastes had, however, even before this time, turned into another direction. It is recorded of his earlier school days that, though he was never seen to pore over his books like the other boys, he always had his lessons, kept a prominent place in his classes, and was frequently applied to by his fellow pupils for assistance. And it was in the days of his childhood "that a dilapitated pane of glass in an upper window of his father's house produced the inquiring thoughts which led him afterward to search into the mysteries of refracted light."

He had become acquainted with James Veitch, of Inchbonny, half a mile from Jedburgh, whom Sir Walter Scott has mentioned as a "self-taught philosopher, astronomer and mathematician." Veitch was a plowmaker by trade, but was well versed in astronomical calculations and observations, having been the first discoverer of the great comet of 1811, and was in his most congenial pursuit when he was making telescopes, a work to which he brought much mechanical skill and scientific accuracy. His "scientific workshop," on the Jedburgh turnpike, "became a gathering-place for all the young men of intelligence in the neighborhood, most of them being in training for the ministry, for medicine, and other liberal pursuits. They had lessons in mathematics and mechanics, but especially in the favorite science of astronomy. The telescopes were tested in the day-time by the eyes of the birds perching on the topmost branches of the 'King of the Wood,' a noble relic of the past forest days, about half a mile from Inchbonny. When the bright sparkle of the bird's eye was distinctly visible by day, James Veitch's specula and lenses were considered fit to show the glories of the sky by night." David "was the very youngest," says his daughter, Mrs. Gordon, from whose book we borrow our anecdotes, "of the quaint and varied group. When he began his visits I do not know, but we find that at the age of ten he finished the construction of a telescope at Inchbonny, which had engaged his attention at a very early period, and at which he worked indefatigably, visiting the workshop daily, and often remaining till the dark hours of midnight to see the starry wonders and test the powers of the telescopes they had been making."

Senators and Representatives use $63,120 worth of stationery every year.

Whither Are We Drifting.

Now that the smoke of battle has cleared away—not that the smoke, or the battle, has anything to do with the subject on which we are about to enlighten the ignorant masses, but that sentence is a good, safe opening for almost any article, and there is nothing like having a good opening, as the shark remarked when it took in the sailor's hind leg. To resume; now that the smoke of battle, or, rather, the shock of the earthquakes, the cyclones and other phenomenal phenomena of nature in the past year are over, it behooves us to look about us, in order to see if we are all here, and what prospects we have for the future.

In glancing back over the past—we always do glance back over the past—we never knew a man to glance ahead over the past, or glance back over the future, but that is immaterial. Let us resume. In making retrospection of the preterlapsed twelve months we recall the fact that there were in this country several earthquakes, which shook up various parts of the United States and New Jersey, something unheard of even by the oldest inhabitant. There were also numerous atmospheric agitations, cyclones, or siroccos, or simooms, or something of that size which went sweeping over the southern and eastern states in unexpected places, and in a most unprecedented manner. Then there were the red sunsets which astonished the scientists, and even made Joe Cook open his eyes and admit that there might be something in heaven or on earth, that he did not know. And lastly, the year wound up with a remarkable winter which was as uncertain as the position of the Democratic party on the tariff.

Now these things may not be strange in their proper place, but earthquakes never were heard of before in the same section of the world; the great storms which almost destroyed towns were an entirely new feature in the section where they struck; the red sunsets were "a new thing under the sun;" and the uncertain winter was a little more uncertain than previous seasons, and indicated more of a struggle than usual, on the part of the weather bureau, to get up any winter at all.

Some wise pundit—that's a first-class word and if we had been disposed to have punned it we should have told the reader to make a pun-dot of it, but that's neither here nor there. Once more we will resume. Some wise pundit, a year or so ago, advanced the idea that the equator was being shifted further north, and that in a short time it was going to belt this country right across the center, and the erratic actions of nature in the contiguous year just departed, seem to uphold the vagaries of the above named prophet. Can it be that the earth is adjusting itself upon its axis; that the earthquakes were occasioned by its shaking itself up in the readjustment; that it is changing its position toward the sun and that the red sunsets were a job lot of *aurora borealis* left in the sky which we happened to strike while getting twisted around into our proper place; that the cyclones belonged properly to "India's coral strand," but, when the earth took a tilt, had swept around further north?"

Whither are we drifting? Is this prophet's prediction true and are we to have the tropics put right into our midst? This is a matter of considerable moment and worthy of very careful consideration. If the United States is to be the torrid zone—it has been hot enough for us sometimes already, especially during the war, but let that pass. We will resume. If it is to be in the torrid zone, then the north pole will be in the temperate zone, and it will be a cold day for China. The north pole country will become salubrious and habitable and the tide of emigration will turn that way. There is where the new country will be for development and where the land-grabbers and other thieves will make fortunes without the necessity of driving off the Indians. These be momentous questions, and while we are not able to definitely settle whether the prophet is right or not, up to the hour of going to press, we throw this out as a sort of danger signal, a kind of warning, so that ladies will not squander in seal-skin sacques good money that might more properly be invested in palm leaf fans.

The largest electrical influence machine in the world has just been made for the physical laboratory at South Kensington. Its discs are seven feet in diameter, of plate-glass three-eighths of an inch thick, and weigh 280 pounds each. Tested under unfavorable conditions, the machine has given a constant stream of sparks fourteen inches long.

"Anna, what must you do, before everything else, to have your sins forgiven?" "Commit the sins."

In the matter of diet, a boiled egg is hard to beat.

No. 238.

LAND OFFICE AT BODIE, CAL., Apr. 13 1885.

NOTICE IS HEREBY GIVEN THAT THE following-named settler, has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Honorable Superior Judge of Inyo County, California, or in his absence before the Clerk of said Court, at his office, at Independence, California, on TUESDAY, May 26, 1885, viz: Raphael Diaz, for the S ½ of S E ¼, Sec. 4, & N ½ of N E ¼ Sec 9, Tp 16 S, R 35 E, M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: W. L. Hunter, J. C. Irwin, N. Rhine, and O. J. Marrs, all of Independence, Inyo county, Cal.

D. WALKER, Register

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNTY of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant.

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents being balance due on an account started and for money advanced, laid out and expended for defendants at their request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3,820 09, upon which there has been paid the sum of $3293 leaving a balance of $527 09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527 09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five.

W. L. HUNTER, Clerk.

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

NOTICE IS HEREBY GIVEN THAT SEALED Proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk, until Tuesday, the 5th day of May 1885, at 12 o'clock M., for the boarding of Inyo county prisoners for the term of one year beginning May 1, 1885, and ending May 1, 1886. Said bids to designate the price per diem for each prisoner, and said board to be paid by warrants drawn upon the General Expense Fund, on bills duly sworn to and presented at the regular meetings of the Board of Supervisors. Proposals must be endorsed, "Proposals for Boarding County Prisoners," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on said 5th day of May, 1885, and the right is reserved to reject any and all bids.

By order of the Board of Supervisors.

(SEAL) Attest: W. L. HUNTER, Clerk,
By THOS. CROUGH,
Deputy Clerk.

PROPOSITIONS FOR THE CARE OF INDIGENT SICK OF INYO COUNTY

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county at the office of the County Clerk until 12 o'clock M., on Tuesday the 5th day of May, 1885, to contract for the care of said indigent sick, for the term of one year from May 1, 1885. Said bids to designate the amount for which parties contracting will care for said indigent sick on a basis of four patients throughout the year, and to include all medicine, medical attendance, nursing, board, lodging and washing; and said medical attendance to be given by a physician having the qualifications prescribed by law. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care. Said contractor to care for all the indigent sick of said county properly admitted to the contractor's care And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for. Said excess to be paid for by extra allowance on presentation of bill duly sworn to at the regular meeting of said Board immediately after said contract has expired; the average of four to be paid for at the regular meetings of the Board on presentation of bills duly sworn to, and all payments to be made by warrants drawn on the Hospital Fund of said County. The person or persons to whom such contract may be awarded shall give a good and sufficient bond in double the amount of such contract price for the faithful performance of said contract. The care and management of said Indigent sick by such contractors shall be at any and all times subject to the inspection of said Board of Supervisors, or any member thereof, or by any person appointed by the said Board for such purpose. Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on the said 5th day of May, 1885. And the right is reserved to reject any all bids.

By order of the Board of Supervisors.

(SEAL) Attest. W. L. HUNTER, Clerk
By THOS. CROUGH
Deputy Clerk

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, APRIL 25.....1885

—See notice of estray in another column.

—Diptheria is said to be prevailent at Tehachipa.

—The children of Mr. Jones at Fish Spring are quite ill of influenza.

—Sweet potatoes would do well in this valley, and would surely command a market.

—Many distinguished physicians now regard pneumonia as an infectious fever.

Along Owens river the new grass is about one foot high and stands thick on the ground.

—Joseph Schalton is again prostrated by asthma, Doctor Blair was called to Big Pine last Wednesday to attend him.

—There was a big crash in mining stocks in San Francisco last Monday. Of course a large number of dupes got fleeced as usual.

—The first ripe strawberries of the season, grown at Independence, were picked by Mrs. Conklin at the beginning of this week.

—Last Fall, at Fort Independence, Mr. Vagt gathered 1100 pounds of apples from one tree. The fruit was first class and every apple perfect.

—The length of the C. & C. Railroad from Mound House to Keeler, 293 miles, is just six miles less than the distance between London and Paris.

—Landlord Levy is having a general renovation and 'cl'arin' up time' at the Blaney House. Everything will be made as clean as a new pin, and as neat as a wax doll.

—John Baxter has hived about one hundred new swarms of bees this season. In his orchard budded peach limbs having but one year's growth are loaded with fruit.

—Frost has done much injury to fruit and grape vines in the northern part of the State. In Napa valley, Sonoma and the vicinity of Chico the damage is great.

—Thursday of last week the barn on Senator Stanford's ranch at Vina, Butte county, was burned and about one hundred head of horses and mules perished in the flames.

—Douglas county, Nevada, offers a reward of $500 for the recovery of the missing rancher, Henry Van Sickle. The Governor is expected to offer an additional reward.

—The Lowell *Courier* says that a Jersey cow in Hamilton, Ontario, owned by V. E. Tuller, has produced thirty-six pounds, twelve and one-fourth ounces of butter in seven days.

—White Smith broke up some land this Spring along the Black Rock slough. He planted twenty-five acres with wheat, which has made rapid growth and will no doubt yield a heavy crop.

—One Indian did some expert carving on another at Bridgeport last week, and the *Chronicle-Union* urges that a coat of tar be given to any person who shall in future be discovered selling whiskey to Indians.

—From the middle of last week till Tuesday of this a storm prevailed very generally along the Sierra Nevada mountains. Here in Owens Valley the wind blew hard most of the time, but without any rain. No damage was done to fruit or other crops.

—A farmer near Sacramento says his crop of asparagus this season will bring him $12,000, $9,000 of which will be profit. He has twelve acres under cultivation. Asparagus would find a ready market along the line of the Carson & Colorado rail road. Our gardeners should try it.

—Pleuro-pneumonia is doing great injury to cattle interests in Missouri. Leading stockmen of St. Louis will make a personal appeal to the Governor for an extra session of the Legislature. It is said that the cattle interest in the State has already suffered a depreciation in value of over $500,000.

—Assessor Irwin arrived home last Wednesday evening. He has completed his work as far south as Black Rock and will continue without delay till the whole shall be finished. Mr. Irwin is making a personal inspection of every bit of property in the county, and his assessment will be very thorough.

—Virginia City experienced the novel sensation of a mining boom last week. A strike of good ore on the 2900 foot level of the Hale & Norcross caused commotion. The extent of the ore body is not yet known. The ore is black sulphuret and goes from two to three hundred dollars per ton.

—Hon. D. H. Brown, late Superintendent of the Vivian mill on the Carson river died at his residence near the mill at an early hour last Friday morning. Deceased was a native of New York State, fifty-there years of age, and a pioneer of both California and Nevada, coming to California in 1849. He leaves a wife and young son.

—The article published in this paper two weeks ago, arguing that Inyo county should be represented at the Nevada State Fair, to be held at Reno next Fall, meets with hearty response from the Press of Nevada. If we make a reasonable effort Inyo can make a display that will do us all honor, and bring substantial good to the county. A hearty welcome will be given Inyo exhibitors at the Nevada Fair.

Court Proceedings.

The following proceedings were had in the Superior Court this week: V. G. Thompson, adminstrator of the estate of G. C. Gracie deceased, versus J. C. Mills and wife. The hearing of the "Motion to set aside and vacate judgment" was taken up. Motion argued for Plaintiff by A. R. Conklin, and for Defendent by W. P. George Esq. At the close of the arguments the motion was taken under advisement by the Court.

John L. Bray, versus J. W. McMurry demurrer withdrawn and judgment taken by Plaintiff, with consent of Defendant. Judgment given against Defendant in the sum of fifty dollars without costs.

C. H. Crohn, versus Rafael Diaz. Cause to be submitted to the Court on briefs, on the 6th day of May, 1885.

Order of sale of estate of G. C. Gracie, deceased, continued until April 30th, 1885.

Why Is It!

Flour made in Owens Valley is advertised in Candelaria at $3.50 per hundred pounds, while for flour shipped from the Sacramento Valley $5 per hundred pounds is demanded. The farmers of Inyo county raise as fine wheat as any grown west of the mountains, and there is no apparent reason why as good flour should not be made here as anywhere. Farmers themselves should endeavor to discover the cause of this heavy discrimination against them, and if possible, have the evil remedied. There must be some cause for consumers paying so much more for Sacramento Valley flour, and this cause is certainly discoverable. Once known, the fault in our flour, whatever it may be, could certainly be remedied. This depreciated value in our flour falls entirely upon the farmer; he is the only loser, as the price of his wheat is governed by the price of flour. Our farmers get little enough, in all conscience, for what they produce, and ought to discover the cause of this discrimination against them, and when discovered, remove it.

Not a Trace.

Dr, D. F. Penington, D. D. S. 536 West Fayette street, Baltimore, Maryland, states that he has personally used the Red Star Cough Cure and in his family and has found it a prompt and sure remedy for coughs and colds. No bad results of other cough remedies. Not a trace of opium or morphia.

Wonders Never Cease.

Prof. C. Donaldson, New Orleans, Lr., proprietor of Musoums, who suffered eighteen years with rheumatic pains, states that he has spent ten thousand dollars to get cured. After trying doctors, famous baths, electric appliances and legions of liniments without relief, he tried St. Jacobs Oil, which completely cured him. It is a wonderful remedy, he says, and he has sold his crutches.

GUARDIAN'S SALE.—Last Monday W. R. Tibbitts sold the estate of his ward, Jeannette Lewis, according to legal notice given.

ADMITTED TO PROBATE.—Last Monday the will of H. F. Uhlemeyer was admitted to probate. W. H. Uhlemeyer, nephew and heir to the deceased, is executor.

CHANGE OF TIME—By a recent change of time all trains on the C. & C. Railroad now arrive and depart at the various stations half an our earlier than formrly. See time card.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

PAID THE FINE.—Last Monday Henry Davis paid fifty dollars fine and was released from jail after five days confinement. Henry says that as far as he is concerned poor Lo will have to go without liquor in future.

FOR SALE.—The following goods will be sold cheap for cash. One mower and rake; plows and harrow; fourteen tons of hay; hay forks; bush scythe, hoes etc.; one parlor stove; one dining table and one center table, and other household furniture; thirty head of hogs and five tons of potatoes; must be sold sooner than May 3d.

D. B. CURTIS,
Butte Ranch.

A CARVING MATCH.—The following is taken from the Calico *Print*. "On the 11th inst. an affray occurred in Collins & Poleyie's saloon, Calico, James Jordan stabbing Pat Oday in the back with a butcher knife. Jordan was under the influence of liquor and tried to settle an old grudge by carving Oday. He was bound over by Justice Williams to appear before the Superior Court at San Bernardino. Oday received several cuts on the head also, but his injuries though severe, will not prove fatal. The prisoner was taken to San Bernardino by Deputy Sheriff LeCyr.

BOARD OF HORTICULTURE.—To the Secretary of the State Board of Horticulture Mr. A. H. Webb, we are indebted for a copy of the report of the proceedings of the Board during the past year. The Report makes a pamphlet of 116 pages, and is not a mere dry record of routine proceedings, but gives most valuable information on matters pertaining to fruit raising. The various insect pests known in this State are described, and the latest discoveries for their extermination are given. On budding, grafting and other operations in the management and care of fruit trees there are many valuable hints. This Report should be in the hands of every orchardist in the State.

Mining Items,

Personal Mention.

Joe LeCyr has opened a livery stable in Daggett.

John E. Jones of Round Valley was in town yesterday.

S. G. Gregg and J. W. Mcmurry came down from Big Pine yesterday.

Mrs. Curtis and her daughter, Miss Emma Kemp, were in town last Monday.

Albert Halverson brought in a big load of corn for Harris & Rhine on Wednesday.

My Harmon has been looking around for a business opening in San Bernardino county. He is expected to settle at Calico or Dagget.

Neil Carmichael came down from Cerro Gordo at the beginning of the week; he was sick and stayed in town all week for medical treatment.

Senator Reddy went to Eureka, Nevada, last week, to defend a number of Miners arrested for interfering with men going to work during a strike.

—Henry Van Sickle, a prominent rancher of Douglas county, Nevada, has been missing for over two weeks and his friends fear he has been foully dealt with. The missing man is aged sixty-two years.

—Pocket mining appears to be the favorite industry in Tuolumne county. The Independent says: A few days since two young men of Sonora took out a $500-pocket near town. As they do not desire their names or the locality of their mine given, their wishes in this report are complied with. But there is no mistake about the gold, for it was exhibited to friends.

—Every home that has a baby should have *Babyhood*, a bright and interesting monthly magazine, devoted exclusively to the care of infants and young children, and the general interests of the nursery. A mother could gain more real useful information from one number of *Babyhood* than would be worth many fold the yearly cost of the magazine, which is but a dollar and a half. Address, Babyhood, 18 Spruce Street, New York.

—Capt. Griffin, of Columbia, has a very rich claim in his residence lot. The streak makes up from the old Tiger claim, crosses the road and runs under his house. He has taken out a large amount of gold, and it is estimated that he will take from $20,000 to $30,000 out of the claim. On Saturday he cleaned up $900. In three pans of dirt he got $80, in one of them $27.75. Parties who have visited the claim say it is the richest thing they ever saw—as the gold can be picked out of the solid gravel walk. We congratulate Cap on his good fortune; he deserves it.—*Independent, Tuolumne.*

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to

A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.

Apply to
HARRIS & RHINE.
Independence.

BORN.

MILLER—At Bridgeport, April 12, 1885, to Mr. and Mrs. Ben Miller, a son.

LEGAL.

ESTRAY.

Last October there came to my place a young mule at that time aged about a year and a half. There is a brand on the left hip but so blotched as to be indistinct. The animal is a mouse colored mare. The owner will please prove property, pay expenses and take the animal away.

ALBERT HALVERSON,
49 Big Pine.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Isaac Harris and Nathan Rhine, partners doing business under the firm name and style of Harris & Rhine, Plaintiff, against S. S. Barrie, E. Simmons and one Davidson whos given name is unknown, partners doing business under the firm name and style of the Maxim Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 18th day of April A. D. 1885 for the sum of five hundred and twenty-seven 9-100 dollars ($527 09) besides costs amounting to the sum of one hundred and forty-one 45-100 dollars, ($141 45) duly attested the 18th day of April A. D. 1885, whereby I am commanded to make the amount of $668.54, besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

All that certain millsite known as the Maxim Mining and Milling Company's mill site, together with the five stamp mill and appurtenances known as the Maxim mill, with all the machinery and fixtures thereunto belonging, the boarding house and all buildings on or near said mill site. Also, all that certain mine known as the Chase mine, described in book "C" of Land, Water and Mining Claims, page 38 Records of Inyo county, being 1500 feet in length by 600 feet in width. Also, all the water rights, water works and water pipes, all the above described property being situated in the Union Mining District, County of Inyo, State of California.

Notice is hereby given that on

MONDAY, the 18th DAY of MAY, A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 1 o'clock p m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the MAXIM Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, April 25, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under-Sheriff.

INYO INDEPENDENT

INDEPENDENCE, CAL.:

SATURDAY, APRIL 25 188

Why the Machine was Busy.

A party of merry young men sat around a banquet table. Mr. Philip Gregory, having been admitted to the bar, had invited a number of his friends to join him in an "informal affair." From an adjoining room, separated by a thin partition, came the almost ceaseless hum of a sewing machine.

"This is the kind of an affair I like," said Bill Tatbert, the prosecuting attorney. "At your conventional banquets men bring their augurs and in turn bore each other; but on an occasion like this, where no man arises in oratorical effort, no applause is expected; no rivalry is felt."

"A banquet is intended to be enjoyed," replied Philip. "Set speeches as you say, are tiresome. Gentlemen, don't be backward, there's plenty of wine. "Say, Anderson," turning to a friend, "sing us a song. Hush, boys, Anderson's going to sing."

Anderson sang the "Old Oaken Bucket." Then a young fellow named Peters recited the "Dying Year."

The busy hum of the sewing machine came from the adjoining room.

"Let's sing something we all know," exclaimed Phil. "Come, fellows." The wine was taking effect. The boys were becoming noisy. 'Old Kentucky Home,' here we go."

"Who's that making such a noise in the other room?" asked Peters. "We can't sing with all that racket going on."

"Dry up in there. Let up won't you?" cried a dozen voices.

"It's a tailor I believe," said Phil. "Confound him, there's time enough for work during the day. Say there," striking the wall with his fist, "can't you stop that machine awhile, hab? Can't you hold up with your confounded racket and let a party of gentlemen enjoy themselves?"

No response. The machine continued an almost ceaseless hum.

"That's an insult, Phil," exclaimed Anderson. "The devilish fellow knows well enough that we are trying to enjoy ourselves."

"Say fellows," said some one, "Let's sing anyhow. Strike up, Anderson, and we'll follow you. Let's all fill up first. Pass that bottle please. Here we go."

"No use to talk about singing here," said Anderson, putting down his glass. "As well try to whisper love in a boiler factory. I'm in favor of making that fellow shut up."

"Probably he's on a piece of work that must be finished to-night remarked Peters, turning to Phil.

"No, I'll bet it's the result of his grasping disposition," Phil replied. "He's afraid he might lose fifty cents."

"Tell you what I'm in favor of," cried a young fellow named Mills, "I'm in favor of going in there and compelling him to stop. We have met here to enjoy ourselves, but confound him he is spoiling the evening."

"We might pay him for his loss of time" some one suggested, "but he could not pay us for our loss of enjoyment."

"You are right," rejoined Phil. "Let's go in boys and tell him he must stop. He's getting worse instead of better. Well, let's fill up again. Here's looking at you boys."

The machine ceased its noise for a moment, then continued its busy hum.

"Where's the door, Phil?" asked Peters.

"Out in the hall."

"Suppose he won't open it.',

"We'll shove it in if he doesn't."

"Come on, boys," said Anderson, "I'll lead the way."

"Shall we knock?" asked Mills.

"It's unlocked," said Phil, turning the knob."

The door opened and the boys stepped into the room. "My God!" exclaimed Phil, "come away."

In a corner a man lay drunk. On a lounge a child lay dead. A woman sat at the machine. Tears were streaming down her face. She was making a shroud.

Napoleon's Judgment.

It was during the unsettled times that preceded the great French revolution of 1848, writes an Englishman, that one of Mr. Rogers' breakfasts was attended by Prince Louis Napoleon Bonaparte, afterwards Napoleon III; Dr. Whatley, the protestant archbishop of Dublin; Lord William Pitt Lennox, the son of the duke of Richmond and myself. The talk of the breakfast table turned a great deal upon French politics and the probability more or less imminent of a revolutionary outbreak in Paris, consequent upon the unwise opposition of Louis Philippe and his too obsequious minister. In reply to a question I told the prince that Beranger, who knew the temper and sympathized with the opinions of the people, had predicted the establishment of a republic consequent upon the downfall of the monarchy, within less than a twelve-month. Prince Napoleon remarked that "if there were barricades in the streets of Paris, such as those by which his way to the throne was won in 1830 the king would not give orders to disperse the mob by force of arms."

"Why do you think so?" asked Mr. Rogers.

"The king is a weak man, merciful man. He does not like bloodshed. I often think he was a fool not to have had me shot after the affair of Strasburg. Had our cases been reversed, I know that I would have had him shot without mercy." I thought little of this remark at the time, but in after years, when the exiled prince, became the powerful emperor, my mind often reverted to this conversation, and I thought that if King Louis Philippe had done what the prince considered he ought to have done—and as he would have been fully justified by law, civil and military, as well as by state policy, in doing—the whole course of European history would have been changed.

Pulpit Utterances.

"Men are perpetually looking at their conscience as though it were the chief judge and they slip bribes into its hand to decide one way or another as they may want it.

"There is no friendship that is strong enough to get along unless it can take faults for granted. Saints may be plenty in Heaven, but they are very scarce on earth, and if you are going to form friendships you must form them so that they will be able to swallow up the faults of those you love."

"Men laugh at creeds, as if they were absurb and unnecessary. Why, we have all our creeds. The only being who has no creed is the idiot."

"Hard times come to the church as well as to the world: times when an excessive expansion of belief has to undergo a proportionate contraction, when watered creeds have to shrink, when Christianity has to undergo a process of liquidation—the reaction from an over production of doctrine. The issue of such times ought to be not bankruptcy but spiritual soundness; confessions of faith representing no inflation of the imagination, but a solid substance of reason, a coinage of creeds having a gold basis.

"The religious press is not entirely a success. Naturally it is devoted to defending the doctrines of different denominations. The secular press is the great educator. Its perfect fairness must be conceded by all. Its lightning speed cylinders do not cry out against the poor because they are poor. Were it not for the press the Gospel preached in this city to-day would be confined to the church walls. By the courtesy of our great papers it is spread all over the world and does untold missionary work.

Bald Heads in the Senate.

Senator Edmunds, the presiding officer of the Senate, has fallen into the habit of wearing a black silk skull cap. He is very bald, and the air of the Senate chamber is uncomfortably cool to exposed cranial surfaces, causing colds and the consequent inconveniencies. So he wears this little black cap all the day, in the committee rooms, in the Vice-President's chamber and in the chair of the Senate as its presiding officer. And there are some other heads in the chamber quite as bald as his. The nearest approach to the system which Senator Edmunds has inaugurated is the course of Senator Williams, the hero of Cerro Gordo. He wears a wig. It is very neat and very well fitting, but he has a way when he has occasion to stroke one side of it of taking hold of the opposite side to keep it in place, thus giving the illusion away at once. Senator Coke, of Texas, is one of the baldest men in the senate. There is a vast expanse of "forehead" extending away over the top of his head and down in the rear so far that there is only a fringe of gray hair running round from one ear to the other. Indeed, the fringe may be said to run clear 'round, for it is heavier in front, where there is a bunch of white beard. Cameron, of Wisconsin, is quite as destitute of capillary covering as those mentioned. His rather small head and retreating forehead fairly glisten in their polished nakedness, while on his face, in marked contrast, is a full growth of snowy white beard. Senator Harris, of Tennessee, is another bald one. He has a peculiarly shaped head, very wide at the back and narrow in front. The fringe of hair running around the vast expanse of baldness is white as the driven snow. Lapham and Sawyer are also baldheads, but the other Senators are fairly well supplied with head covering.

Modern Dress Vulgarizing.

Could one of the old Greek sculptors be transported into a modern drawing room he would surely wonder less that we have no better art than that we should have any at all. For the truth stares every thoughtful person in the face. We are daily doing more and more to travesty the human form and set at naught those very principles of harmony inculcated by various aesthetic teachers with so much vehemence. The modern dress of both sexes by no means accords with the simplest laws of beauty, hygiene and economic science. And, take it for all and all, perhaps the dress of a lady was seldom more inartistic, unhealthy and extravagant than at present, and surely never more vulgarizing.

Sport For The Eyes.

It would be well if we had some form of sport which would encourage the improvement of eyesight. We might have eye matches, for example, with prizes for those who could see furthest and clearest. There could be winking matches, open to persons of both sexes, for the purpose of strengthening the muscles of the eyelid, and government might offer premiums to blue-eyed ladies, and thus encourage the style of the eye which, according to oculists, is best adapted for ordinary wear and tear.

The Happy Mean in Hospitality.

The Canadian, as any one will admit who has been his guest, possesses in an eminent and most enjoyable degree the virtue of hospitality. In him are happily blended the best characteristics of the Englishman and the American. The Englishman, hearty as is the welcome which he extends to a guest, still compasses his house and his heart round about with barriers of reserve and suspicion, which it is not always easy to surmount or to throw down. The American, on the other hand, for all his prompt courtesies and willingness to oblige and to entertain, is often apt to carry what we might call the hotel and business atmosphere into his acquaintanceships. He entertains royally, but it often seems as if he grudged the time and personal attention which are requisite in order that the guest may enjoy himself to the utmost. The Canadian, as we have already said, blends in a happy measure the best traits of his British progenitor.

The I'm-to-be-Photographed Look.

It is the hardest thing in the world to get some folks into any kind of a natural position, or expression of countenance. They will put a kind of I'm-to-be photographed look on their faces when they come into the gallery and it generally stays there. Then the way some women dress! They have an idea that the more colors they get on the better they look, and the result is that when they see their photograph and the curious effect produced by the colors, they'll blame the photographer, though we always tell them beforehand. Nearly all persons look better in a picture than in reality, except those having clear complexions. Some ladies, for instance, would be considered beautiful in side view of their features, while a front view is decidedly disappointing. Of course in photographing them, we take the side view. Some look better with a hat on and some in full out door costume. But there is one thing you may not know, and that is very few ladies look well photographed in white, yet the only pictures many have taken are in their graduation or wedding dresses.

The Latest in Carving Knives.

Among carving knives the old-fashioned nine-inch straight blades have given place to a variety of shapes, the cutting edges generally describing some part of a circle. A variation of a Turkish cimiter is the most popular blade. For steak or game a six-inch knife is used, while the turkey or family roast cannot be attacked with a better implement than a ten-inch blade. For some reason, known only to themselves, the carvers in hotels and restaurants are still faithful to the "slicer," a blunt-pointed, perfectly straight blade which has the appearance of an overgrown case-knife. It varies in length from twelve to sixteen inches, and is so flexible that one can almost tie knots in it. An oddity in the cutlery stock is the jointing carver, designe for separating the joints of poultry and game of doubtful age. The blade is a long and very narrow steel, with an almost needle point.

How the Porter Returned the Joke.

It happened in a sleeping-car, but when or where doth not, for obvious reasons, transpire here. A lady who was traveling with her little daughter had occasion to call the porter for some needed service by means of the electric bell, with which convenience the car was furnished. The child saw how it was done, and presently she slyly pressed the button, causing the porter to appear with a respectful query as to what was wanted.

"I didn't ring," said the woman, "it was my little Lizzie."

The porter withdrew, but it was not long before he was again summoned and again received the explanation that "Little Lizzie" had rung the bell. This was repeated a number of times, and the woman thought it a fine joke, but the porter began to look tired. At last the mother wished something and pressed the bell-button. No porter came. Again, and with more force, she pressed the knob, but there was no response, and she was finally obliged to go in search of the man and give her orders herself. By the time the porter had brought the needed article she had grown very indignant, and proceeded to reprove him with severity.

"Why did you not come when I rang the bell?" she demanded.

"Did you ring the bell, ma'am?"

"Of course I did, over and over again."

"Well, you see, ma'am," said the darkey, ducking his head, while a grin spread slowly over his shiny face, "your little Lizzie done broke dat bell."

A roar of laughter from neighboring passengers let into the woman's mind a flood of light on the situation evidently, for she subsided at once, while the men in the car, delighted with the darkey's wit in muffling the bell by detatching the wire so as to break the circuit, gave him a quarter a piece all around.

On keeping fatty oils several hours at a temperature of four degrees below zero, Serra Carpi has obtained solids of remarkably different degrees of hardness. A minute cylinder of iron was only forced into solidified olive oil by a pressure of 1,700 grams, while cotton oil required but 25 grams.

Dogs' Lunches.

"SWEETBREADS FOR NELLIE."

At a swell boarding-house which has a reputation for high-toned and select circles, there is a peculiar feature of the table-talk, which, to the uninitiated, is a great mystery, and to a superstitious person would seem to indicate the presence of a third party unseen to mortal eyes. At some table—there is scarcely one exempt—the conversation will run as follows:

"Waiter, have you sweetbreads for Nellie?"

"Yethum, oh, yethum; they done ready down stairs."

The new boarder says to himself: "So they have a little girl; must be an invalid or she wouldn't get sweetbreads;" and he thinks no more of the matter unless he becomes a "permanent," when he learns, to his intense disgust, perhaps, that Nellie is a water spaniel, who never sees the inside of the dining-room.

There is one table where a dainty little lady appears, carrying on her arm a silk work bag, tied with blue ribbons. I looked into it once, and let me tell you what I found. She had forgotten it and it hung on a chair back. The inside was lined with oiled silk, and these fragments were dropped gently in: A tiny bit of sausage, a round of marrow bone and one cookey. This was dinner for a black-eyed French poodle, with "fleece as white as snow."

But there was a beautiful widow came there to board—young and rich, with velvet dresses and diamonds galore. She was the admiration of every man, and the envy of every woman, because she got the juicy mouthful of porter-house steak and real cream in her coffee. And at every meal she held up a lovely diamond-ringed finger to the waiter and said warningly:

"Don't forget the coffee and toast for little Minnie."

"To much trouble to bring the child to the table, I suppose," growled the cynic.

"Is little Minnie old enough to feed herself?" asked the spoony young man with the Mary-had-a little-lamb voice.

"Oh, no, the sweet thing! She is a year old, but I just love to feed her," and she proceeded to cut a half pound of tenderloin steak into half inch bits.

"Does she ever choke herself?" asked the cynic, glancing wolfishly at the steak.

"She did once," said the pretty widow with a piteous expression of countenance. "Poor little darling! her collar was too tight and she was chained up."

"Good gracious, woman!" ejaculated the horrified cynic, "do you mean to say you chain up your own child?"

"Who said anything about a child?" asked the widow beginning to cry. "It's my dear, precious skye terrier, my dog, sir."

The cynic left the house that day to return no more.

There was one very stout elderly lady who used to board there who regularly laid aside tid-bits until a pyramid of broken food rested beside her, and regaled the eyes of the other boarders. These she finally swept into a napkin with the brief explanatory remark:

"For my dog's lunch."

So far there has never been but one man who took a lunch from the table, and in that case the dog was a cat, and, singularly enough, called Tom. He always carried a regular meal—meat, bread and pudding—home to Tom. The only explanation he ever gave was this:

"There's only me and my wife in the family, but we keep a boarder for his company."

It took the landlady a long time to appreciate the situation of affairs. She could not understand why one lady put cookies up her sleeve prior to leaving the dining-room, while another surreptitiously slipped a rib of roast pork into her pocket, or why the pocket of another one bulged so remarkably. The good lady did not care to cater to the canine tribe, and supposed that in refusing them room in the house they were effectually disposed of.

But she was never more mistaken, as the small mysterious package by the side of plates often testified. It is no uncommon thing to see a piece of meat sliding off a plate as if a string were attached to it. In quick succession a piece of bread will follow. No one asks any questions; it is a foregone conclusion that Nellie or Minnie or Ponto is wasting in a locked room for this commissary department.

One lady had boarded at the house for some time, and no one had ever suspected that she kept a dog: its voice was weak, and when it went out for air and exercise it was hidden under the shawl or cloak of its sedate mistress. But one day she let the cat out of the bag, or, rather, the dog escaped from the room, and with the recklessness of ignorance went straight into the *salle a mange* in search of its mistress. It was the hour of high noon. Some one informed the lady that a dog was looking for her. She could not—would not disown it, but walking majestically from the room she went to the landlady herself.

"My dog is in the dining-room," she began.

"What!" interrupted the scandalized mistress of the house, "a dog in my dining-room?"

"Yes'm," returned the other, meekly. "Will you be so good as to go in and hand me out its mangled remains?"

In Newport and at Saratoga dogs' lunches are sent to their rooms and charged for, the same as other boarders.

In Detroit pet dogs are boarded out during the summer. There is a very respectable boarding-house for them on East Larned street.

"The only person," said the landlady alluded to above, "who ever offered to pay me was a clergyman. He paid $4 a month for his dogs' lunches."

A Mind Infection.

In the year 1855 I commanded a ship bound from Hong Kong to Melbourne, in Australia. We had on board 500 Chinese passengers (not coolies), and two cabin passengers, which, with myself and wife, officers and crew, made a total of 550 souls. A few days' sail from Hong Kong one of the passengers was taken down with the regular small-pox. Here was a truly deplorable situation, for probably not one of the Chinese passengers had ever heard of the word vaccination. I immediately resolved to steer for the English colony of Singapore, where there was a hospital, and where I could land my sick passenger, after which I would remain a few days in order to ascertain whether any more cases would break out. I placed my patient in a room as far removed from other patients as I could, and only the steward and myself were allowed to care for him. The carpenter of the ship seemed to have the most intense apprehension about contagion, and dreaded the disease so much that he avoided in every way possible the cabin where the passenger lay sick. When we arrived at Singapore, I had the patient removed to the hospital, and when we lowered him over the gangway into the boat, the carpenter went to the extreme point of the bow so as to be far away from contagion as possible. After remaining as long as was considered sufficient for the safety of all concerned, I set sail for Melbourne, but a few days out the carpenter was taken down by an attack in a mild form of small-pox. I landed him at the quarantine in Melbourne, and not another person had the disease or any symptoms of it. Now, did not that man's fears predispose him to infection, or perhaps actually produce the disease of which he was so afraid? It was certainly very remarkable, that of all the 550 persons on board that ship, he should have been the only one to suffer.

The Man Who Organized a Giant Monopoly.

The richest man in Cleveland, if not in Ohio, is the President of the Standard Oil Company. Rockafeller is a young man still, not more than 50. He is a self-made man, a Baptist—liberal and generous. He owns a fine residence at the corner of Euclid and Case avenues worth $100,000, and on the rear of his lot he has a barn which has cost more than twenty ordinary houses. His lot alone is worth what would be a fortune for a common man, and he has also a magnificent country residence eight miles out of the city, on the lake shore, and a good sized house in New York. No one in Cleveland outside of Rockafeller knows what Rockafeller is worth. There is no doubt that the sum runs up pretty far into the tens of millions, and most of his money is in Standard Oil stock, which pays royal dividends. Still, there are thousands of men here who remember Rockafeller when he was a poor commission merchant down on the wharves near the viaduct. He made his money out of oil. As soon as he had a little saved he organized a company and went into Western Pennsylvania and bought oil lands. As he got more he kept buying, and finally succeeded in organizing the Standard Oil Company and making it what it is.

Home Life in America.

Out of slender resources many an American wife makes an attractive home. If the comparison were made it might appear that there is more privacy and quietness in the home life in America than in that of England. Is not the typical English home, whether in country or city, always full of guests? Does not conventionality invade the family? There could scarcely be a more interesting study than comparison of the home life of different countries—Germany, England, America. But to suppose that the thing itself is wanting in America is to hit as far wide of the mark as possible. The increasing frequency of divorce may be thought to indicate indifference to the sacredness of home and family: but on the other hand, the alarm which is beginning to be felt in view of the fact shows how highly the home is valued. In any country it is, of course, true that absorption in fashionable life is fatal to the interests of the home.

The hand of the ideal woman will seldom have knotty fingers, as woman yields obedience more to the imagination and to intuition than does man; but if the hand be small, supple, soft, the owner will be bright and of high spirits. If the fingers are delicate, smooth-pointed, and the palm narrow and elastic but not soft, there will be a fondness for spiritual and intellectual pleasures rather than for those of sense.

The people living next door to Mr. Carlyle's home in Cheyene Walk, Chelsea, have been so bothered by visitors that they have put up a notice: "Please don't inquire. We do not know anything about Mr. Carlyle." How mad that would make the irascible old man if he only knew. Especially the word "Please."

Blistered Ears and Seasickness.

The semi-circular canals of the internal ears are nowadays pretty well understood not to be organs of hearing but of equilibrium. The sensation they normally give us is that of change of direction and speed in the movements of our head through space. When over excited they gave rise to vertigo and nausea. A large percentage of deaf mutes, in whom the canals are presumably thrown out of function, are insusceptible of being made dizzy. Of a considerable number of such deaf mutes who had been exposed to seasickness, none, with the exception of two doubtful cases, had ever suffered. All these facts lead to the hypothesis that seasickness may arise, in the first instance, from the over excitement of these sensitive organs, and, finally, they lead to the practical suggestion that such over-excitement might be warded off or allayed by "counter irritation" which consists in blistering or otherwise reddening the skin above and behind the ear. The experient is so simple, and would be, if successful, so pregnant of relief that it seems a shame it should not be tested by a large number of persons. I have tried it myself twice. The first time was on the British Chanel, on a very rough day, when every one around me was violently sick, I simply rubbed the skin behind my ears till it was slightly excoriated. An incipient nausea, which I felt at the end of the first half hour, completely vanished as the sensation of cutaneous burning became strong. In crossing the Atlantic I was less successful but my seasickness was rather anomalous, its principal symptom being a high fever and no nausea, and I do not consider the failure to be a refutation of the method. It may be that the latter will serve for short exposures, like channel voyages, but not for longer ones. At any rate, the scientific presumption in favor of its utility is certainly large enough to warrant experimentation by any one who dreads the direst of all forms of misery.

Ten Thousand Dollars for a Drink.

"You may not believe it, but I once paid $10,000 for a drink of whisky," said a corporal on duty at the arsenal in the mess room the other day. The talk had turned to war prices and some pretty steep figures were mentioned. No one believed the corporal and all laughed. But the corporal braced up and said:

"When I left Petersburg in '65 I had $20,000 in Confederate scrip. It was as cold as blazes and a feller got warm thinking of whisky. I was hard up for a drink, and as I had been reading a paper on the delicious liquor, my mind wandered to it. Before I had gone far I met a traveling whisky saloon on wheel. Yes, a sutler, you know. That's what we called them. I ha'n't a cent except the scrip, but I just went up and says:

"'Sutler, have you any good whisky?' 'That I have,' says he. 'Well, if you will give me a good drink,' says I, 'I'll give you $10,000.' Well you should have seen him smile. He knew it was a gag, but just to see the thing out he filled me a cup full of 'anglefoot,' which I drank with a relish, you bet. Then I gave him $10,000. I offered the other $10,000, but he had been there."

The Coyote's Voice.

They say that there is only one thing that can imitate a coyote's call, and that is an Indian. This seems to imply that an Indian must be the more comprehensive songster of the two. But it is not so, for conversely there is only one thing which can imitate an Indian, and that is a coyote. The coyote's voice, moreover has one peculiarity in which it gets ahead of the Indian, it does not echo. It used to echo, but the coyotes would not stand it. They hated to have it fling in their teeth that a mere soulless atmospheric phenomenon could keep even with them, so one day they got up early and set themselves to beat the echo. Day was just breaking as the first coyote commenced the overture, and when he left at dusk a second boyote took up the burden and sang till dawn. But the echo was still on time. Twenty-three coyotes used themselves up, and still the echo came up smiling. Every note was taken up as it fell due, and all drafts were cashed on sight. When the eighty-seventh coyote succumbed the echo was scarcely perceptibly behind with the responses. That exhausted the visible supply of coyotes, so the first one went to bat again. This was too much for the echo. It broke its spirit. When the second coyote relieved guard it was two bars, twenty-five cents behind. By dawn he was only at the top of the last page but one. Another week increased the coyote's lead to one hour and four furlongs. Then the minals doubled up and by the middle of July the echo was mauled beyond recognition. On the 293d round the echo went down without being touched, and the coyotes claimed a foul. Since then the echo never touches a coyote, because he never knows how many more there are back of it.

Laying 'Em All Out Cold.

Citizen—"You have traveled in Canada. How did you like it?"

Commercial Traveler—"First rate. But it was dreadfully cold. In one placed I witnessed the 'Two Orphans.' Everybody cried, and the tears of the gallery fell upon the orchestra seats in the shape of snow."

LODGE DIRECTORY.

F. & A. M.

THE STATED MEETINGS OF INYO Lodge, No 221, F. & A. M., will be held at the Masonic Hall, Independence, at 7 o'clock P. M., during the ensuing Masonic year as follows:

Saturday.....January 24th
" .....February 28th
" .....March 28th
" .....April 25th
" .....May 23d
" .....June 27th
" .....July 25th
" .....August 22d
" .....September 19th
" .....October 17th
" .....November 21st
" .....December 19th

Members and visiting brethren are cordially invited to attend.

JOHN W. P. LAIRD, W. M.
J. E. PARKER, Secretary. dec29 1y

BREWERIES.

The Pioneer Brewery.
INDEPENDENCE, CAL.,
JOS. FERNBACH, Prop'r.

LARGEST, MOST COMPLETE AND FINEST Brewery on this side of the Sierras. Having thoroughly renovated the entire establishment introduced new improvements and secured the services of one of the best practical brewers on the Coast, the undersigned is prepared to supply the public with the PUREST AND BEST QUALITY OF BEER, by the

KEG, BOTTLE OR QUART.

Prompt attention given to all orders.
JOSEPH FERNBACH,
n584tf Prop'r.

Germania Brewery,
LONE PINE, CAL.,
John Lubken, Prop'r.

THE UNDERSIGNED WOULD RESPECTFULLY call attention to the superior facilities of the above well-known establishment for the manufacture of the finest quality of Beer, which is furnished to customers in all parts of the county at the lowest possible rates.

n476tf JOHN LUBKEN

LIVERY STABLES.

PIONEER
LIVERY & FEED STABLES,
....AT....
Independence, - - Cal.

HAVING RETURNED AND RESUMED THE management of the above well-known livery stables, patrons can be assured of finding there the best of Buggy Teams, Saddle Horses, and

LIVERY ACCOMMODATIONS

in general. Also, Hay and Grain for sale by the pound or ton.

April 30 1881 O. I. MAIRS, Prop'r. n567tf

A NEW DEAL.

INYO INDEPENDENT.

INDEPENDENCE, CAL.
SATURDAY, MAY 2 ..... 1885.

C. Mulholland,
EDITOR & PROPRIETOR.

IN Fresno County the appearance of grasshoppers has caused a good deal of uneasiness.

ANOTHER fight is reported between Russians and Afghans. It is said the Russians were badly beaten, and that nearly the whole force engaged were killed.

A GANG of thieves and thugs has been making San Bernardino a rendezvous for several months past and the *Index* wonders if it is not time for the officers to drive them out.

A CHANGE is taking place in the views of eastern men on the silver question. The more the subject is discussed, and the better it is understood, the more friends are gained for the cause of silver.

No recent event, though the time has been full of misfortunes, has been so humiliating for England as the publication of the latest "poem" by Tennyson, the world's worst rhymer, and poor England's best.

SO MANY mechanics have swarmed into the United States from Europe that there is more skilled labor in the country than there is work for, and American born boys cannot get a chance to learn trades.

UNITED States troops are keeping open the railroad across the isthmus of Panama, and preventing the gentle citizens of that country from cutting the throats of all foreigners. If they want to indulge in that pastime among themselves it would be a pity to stop them.

THE halfbreed, Riel, is giving the Canadian Government plenty of trouble. The Indians are reported to be greatly excited, and hundreds flocking to join Riel's forces. With 300 men he is reported to have inflicted a bad defeat and heavy loss upon 600 troops commanded by General Middleton.

THE probabilities of war between England and Russia are very much stronger than a week ago. In both countries the war feeling is reported to be very strong. The English Parliament has voted the Government credit of $55,000,000, and Mr. Gladstone was enthusiastically cheered when he asked for the amount.

SENATOR Fair arrived at Virginia City last week after an absence of two years. Crowds swarmed into the hotel to get a share of the champagne and cigars that were lavishly dealt out. No matter how bitterly Fair may be cursed the lips and tongues that do it are always ready to receive his liquors and cigars.

DURING the past week reports of the condition of General Grant have been very favorable. He went out walking a few times, has been able to take food without difficulty, has suffered but very little pain, and has had sound unbroken sleep. All this is very encouraging, and affords good ground for hope that he may yet have a good deal of life to live.

LAST February a terrible snow slide occured at the Homestake mine, Colorado. Many lives were lost, but the bodies of the unfortunates were not recovered until last Monday. An exploring party went out from Denver, and made an excavation in the snow until they reached the buried cabins. In one of the cabins the bodies of the following namad men were found: Martin Borden, Sylvester Borden, Horace W. Matthews, John Locke, John Burns Joseph Matthews, Charles Richards, Chris. Harvey, Robert Campbell and John Burnes.

SENATOR Don Cameron of Pensylvania is sojourning on the other side of the Sierra Mountains, trying to regain his health. The Senator has tried the South of France and Florida; but without much benefit. If Mr. Cameron would come up here into Inyo county, and inhale the order laden breezes that murmur through orchards and vineyards and receive fragrance from many a bank where on the wild thyme blows; and would drink of the crystal streams that dash in silvery spray down the mountain sides from the everlasting snows that crown their summits, the sluggish current of his blood would be changed from dark to crimson and would rush with strength renewing power through his enfeebled frame. Come up to Inyo, Senator, and we will take you in and do for you: if you get well we will rejoice, and if you die we will give you a monument beside which that lately finished at Washington would be dwarfed into utter insignificance we will bury you at the foot of Mount Whitney.

INSECT PESTS.

The Latest Known Remedies For Distroying Them.

The following are the moans recommended by the State Board of Horticulture for the destruction or prevention of insect fruit pests.

CODLIN MOTH.

The ground in the orchard should be kept thorougly clean from weeds by constant cultivation, and the surface in as fine tilth as possible and smooth so as to avoid furnishing a hiding place for the moth. The bark of the tree should be as clean and smooth as possible. All loose pieces of bark should be carefully removed without injury to the green layer and then destroyed and the trunk washed with soft soap suds or the "whole oil soap and sulphur mixture" in the strenght of one pound to one and one half gallons of water. Strips of grain sacks or other similar materiel should be cut about eight inches in width and long enough to encircle the tree, lapping over slightly, and being folded, placed with the open edge downwards upon the trunk about one foot from the ground. The upper or folded edge should be tight upon the tree, while the lower edges should be loose. *Once every week* these bands should be removed and all larvæ found in them killed. Once every week all fruit upon the tree should be carefully examined and the infected specimens picked, and then boiled and fed to hogs. This work should be commenced as soon as the fruit is well set and of sufficient size to examine. Bands should be applied by the middle of May of each year. The whole system must be carried out, until all fruit is gathered from the orchards. Great care should be taken to make sure that all boxes received from other places are thoroughly disinfected before taken into the orchard.

SCALE INSECTS.

At this season of the year the best remedy known at the present time is that of spraying infected trees and fruit thoroughly with the *whale oil and sulphure mixture*, in the strength of one pound to one gallon, or one pound to to one and one half gallons of water. This may be repeated. During the winter season the proper treatment is by concentrated lye one pound to water one and a half gallons applied by fine spray. This must not be applied in the summer time.

RED SPIDER

Is best attacked after the egg is hatched and during the period of activity. At this time the whale oil soap and sulphur mixture, in the strength heretofore mentioned, and to which is added a very strong decoction of tobacco is the most effectual yet used.

WOOLY APHIS.

The positively effectual remedy for wooly aphis yet remain undiscovered. It is particularly difficult to treat the Aphis upon the roots of the tree. The means most effectual for those in the top of the tree is the spaying with a strong and hot decoction of tobacco leaves and stems, one pound to one gallon of water, then diluted by the addition of one gallon of water when used. It should be applied as nearly as possible at 130° temperature. Applied to the collar of the tree and just under ground, the following has been used with success in destroying the Aphis upon the roots, or at least, in preventing its appearance above ground: One half gallon whale oil; boil in two and a half gallons water; to this add one third of a pound of potash to make a soap. For use add to this quantity of soap one and one half gallons of the strong decoction of tobacco. Then to every five gallons of the wash thus made add one half a pint of Calvert's crude carbolic sheep dip. Apply by brush or spray, and then replace the earth mixed with a liberal quantity of air slacked lime and wood ashes.

GREEN APHIS.

Until we ascertain better means, the most effectual remedy is the spraying by whale oil soap and sulphur mixture. Other species of the Aphides are noticeble on the apple, pear, plum etc, and should receive similar treatment.

BORERS.

Prevention is better than cure. Shading the trunk and preventing the sun burning the bark will almost always prevent the work of borers. Shade the trunk by two boards nailed together and secured to the tree by tying, or by cloth fastened to two poles driven into the ground close to the trunk. Allow the tree to branch out low down on the trunk. Where borers have been at work wrapping the trunk of the tree with burlap has been found a most valuable remedy. Rubbing the trunk of the tree near the ground with fresh common bar soap is very useful.

PEAR AND CHERRY SLUG.

The use of dust, or the finely powdered earth of the orchard, thrown freely over the trees with shovel or otherwise, is effectual in the distruction of this pest.

TENT CATERPILLAR

The twigs around which are clustered a band of eggs should be cut off and destroyed. If hatched out the caterpillar should, while in the branches, be taken from the tree in the same way and burned: or when scattered about the tree they should be shaken off, and prevented from ascending the tree trunk by placing upon the trunk a greased band, which they will not cross if the grease is kept soft. Then they may be readily killed when collected in masses,

CANKER WORM.

For the past three seasons this caterpillar has caused great damage to some orchards, but is not generally known through the state. The best means of combatting it is to place about the trunk of the tree a thick rope, and over this a strip of tin, six inches wide, long enough to go around the tree and lap over a little, being secured by a nail driven through the tin and rope. This secures a space both above and below the rope between the band of tin and the tree. This proves an obstruction to the ascent of the tree by the wingless moth to deposit her eggs. Apply this band in the Autumn. Destroy bunches of eggs deposited on the trunk below; also, look on the under side of loose pieces of bark for eggs. When the worm is at work upon the tree and the foliage destroyed, there will be no crop of fruit matured. Then the effectual remedy is by spraying the tree with arsenic one pound to one hundred, or one hundred and fifty gallons of water. Where arsenic has been used, three pounds to two hundred gallons of water, the past season, although burning the foliage at that time, if effectually destroyed the worm. The trees are in fine foliage and bearing a good crop of fruit at the present time.

BAKING POWDER.

ROYAL

BAKING POWDER
Absolutely Pure.

This powder never varies. A marvel of purity, strength and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

OFFICIAL.

FINAL HOMESTEAD PROOF.

No. 298.

LAND OFFICE AT BODIE, CAL., Apr. 13 1885.

NOTICE IS HEREBY GIVEN THAT THE following-named settler, has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Honorable Superior Judge of Inyo County, California, or in his absence before the Clerk of said Court, at his office, at Independence, California, on TUESDAY, May 26, 1885, viz: Raphael Diaz, for the S ½ of S E ¼, sec. 4, & N ½ of N E ¼ Sec 9, Tp 16 S, R 36 E, M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: W. L. Hunter, J. C. Irwin, N. Rhine, and O. J. Mairs, all of Independence, Inyo county, Cal.

D. WALKER, Register

ESTRAY.

Last October there came to my place a young mule at that time aged about a year and a half. There is a brand on the left hip but so blotched as to be indistinct. The animal is a mouse colored mare. The owner will please prove property, pay expenses and take the animal away.

ALBERT HALVERSON,

REAL ESTATE AGENCY.

The Inyo County Real Estate Agency,

Conklin & Mulholland,

PROPRIETORS,

BRANCH IMMIGRATION BUREAU

This establishment is instituted for the purpose of furnishing information to those who are seeking cheap and desirable homes, in the land of a climate unsurpassed, plenty of water, and whose fertility of soil is equalled in no locality.

In Owens River Valley lands can be obtained by occupancy, by purchase, or by Government entry.

WE WILL BUY,
SELL, EXCHANGE
AND NEGOCIATE LANDS
IMPROVED OR UNIMPROVED

Make Entries of Government Lands Under Homestead, Pre-emption, or Timber Culture Entries.

Give Any Information, Legal or Otherwise, In Person or by Letter.

CORRESPONDENCE
—SOLICITED.

—o—

To those who desire cheap lands for producing any and all the Cereals, Grasses, cultivated or wild, any and all vegetables, the choicest and most delicate fruits, as well as the hardiest, or lands for vineyards which are unsurpassed, and which can be obtained by the acre, hundreds or thousands of acres, we say come to

Owens River Valley,

the most fertile and desirable portion of California, which means that it has no equal on the Globe.

Now Is The Time, When Lands are Cheap and Can Be Obtained.

—o—

WE HAVE FOR SALE THE FOLLOWING CHOICE TOWN AND COUNTRY PROPERTY:

The New York Butte Ranch, comprising 400 acres, all grass and tillable lands, a large and fine two story frame dwelling house, stables and corrals, perfect water right in abundance, a large orchard of apple, peach and other varieties of fruit trees, and a vineyard.

The Eight Mile ranch, North of Independence on the Main road, good dwelling house, 30 acres in alfalfa, with one hundred inches of water.

Houses and lots, stables, business houses and unimproved lots in town of Independence.

Four ranches, the Cartago and Olanche properties, pasture and alfalfa lands, comprising 1200 acres, with plenty of water, a number of dwelling houses and stables, 150 acres in alfalfa, fruit trees, vines etc.

120 acres of land, all fenced, adjoining the town of Independence.

10,000 acres in Tulare county. The finest grazing lands on the Coast.

Hotel and saloon properties in the town of Bishop Creek.

Valuable gold, silver and lead mines, patented and unpatented.

Furnaces, Mills and Machinery.

The Rex Montes, Arctic and Bomerang, patented mines together with the Rex Montes quarts mill, in perfect running order, with water power, five stamps with room for ten, with all necessary well built buildings.

Four acres in the town of Independence all set with choice apple, peach, apricot, nectarine, pear plum and quince trees, grape vines, black berries, shrubbery, good dwelling house and stable and one-sixth of all the water flowing down Pine and Pinyon Creeks.

GEO. STEVENS,

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

NOTICE IS HEREBY GIVEN THAT SEALED Proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk, until Tuesday, the 5th day of May 1885, at 12 o'clock M., for the boarding of Inyo county prisoners for the term of one year beginning May 1, 1885, and ending May 1, 1886. Said bids to designate the price per diem for each prisoner, and said board to be paid by warrants drawn upon the General Expense Fund, on bills duly sworn to and presented at the regular meetings of the Board of Supervisors. Proposals must be endorsed, "Proposals for Boarding County Prisoners," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on said 5th day of May, 1885, and the right is reserved to reject any and all bids.

By order of the Board of Supervisors.

{SEAL} Attest: W. L. HUNTER, Clerk,
By THOS. CROUGH,
Deputy Clerk.

PROPOSITIONS FOR THE CARE OF INDIGENT SICK OF INYO COUNTY.

NOTICE IS HEREBY GIVEN THAT SEALED proposals will be received by the Board of Supervisors of Inyo county at the office of the County Clerk until 12 o'clock M., on Tuesday the 5th day of May, 1885, to contract for the care of said indigent sick, for the term of one year from May 1, 1885. Said bids to designate the amount for which parties contracting will care for said indigent sick on a basis of four patients throughout the year, and to include all medicine, medical attendance, nursing, board, lodging and washing; and said medical attendance to be given by a physician having the qualifications prescribed by law. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care. Said contractor to care for all the indigent sick of said county properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for. Said excess to be paid for by extra allowance on presentation of bill duly sworn to at the regular meeting of said Board immediately after said contract has expired; the average of four to be paid for at the regular meetings of the Board on presentation of bills duly swern to, and all payments to be made by warrants drawn on the Hospital Fund of said County. The person or persons to whom such contract may be awarded shall give a good and sufficient bond in double the amount of such contract price for the faithful performance of said contract. The care and management of said Indigent sick by such contractors shall be at any and all times subject to the inspection of said Board of Supervisors, or any member thereof, or by any person appointed by the said Board for such purpose. Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of 1 o'clock and 4 o'clock P. M. on the said 5th day of May, 1885. And the right is reserved to reject any all bids.

By order of the Board of Supervisors.

{SEAL} Attest: W. L. HUNTER, Clerk
By THOS. CROUGH
Deputy Clerk.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, MAY 2 1885

—No houses for rent in Candelaria, every store building and dwelling in the town is occupied.

—Stephen B. Wilkin, a former resident of Virginia City, died at the Stone wall mine in San Diego county on the 15th ult.

—At the beginning of the week the first cherries of the season were selling in Virginia City at thirty cents a pound. Strawberries were selling at three boxes for four bits.

—John Walter, Mr. Landers and John McCrea came up from Kern county a few days ago, to attend the Land office at Bodie. These gentlemen have made locations of desert land in Kern county.

—During the recent earthquakes in Spain houses built on land at the border of the Mediterranean Sea suffered in general less injury than houses built on rocks at a higher elevation.

—Last fall at his farm at Alvord, S. G. Gregg planted quanities of apple, pear and locust seeds; also pits of other fruit bearing trees, and all have come up and are making splindid growth, Wheat and barley are also of remarkable growth, and give promise of a heavy crop.

—It is believed that the whole apple crop of Honey Lake Valley has been destroyed by frost. Reno, Carson and Virginia City get a large portion of their apples from Honey Lake. If the fears of the Honey Lakers are verified the fruit raisers of Owens Valley will have less competition in those markets next Fall.

—A valuable mare belongining to W. Boyd was very badly torn by barb wire in the fore part of the week. The wire had become detached from the posts, making a gap in the fence surrounding the pasture, and in endeavoring to pass through she became entangled, mangling her breast and sides frightfully. Mr. Boyd believes she will be permanently injured.

—Please send to us the names and addresses of any farmers who, you think, would be interested in pamphlets and circulars giving information about California, and its millions of acres of public lands, which are given away to actual settlers in tracts of 160 acres each under the Homestead Laws of the United States. Immigration Association of California; office, San Francisco, No. 10 California St.

—A company has gone into the business of catching porpoises along the coast of New Jersey for the oil and hides of the fish. It has been discovered that the meat looks like venison and prominent hotels and restaurants in Philadelphia and New York have made offers to take the meat of all the porpoises the company may catch. Hash will now be a greater dainty than before.

—Daylight with dificulty broke through heavy clouds last Monday morning, and soon rain came pouring down, and continued till well along in the afternoon. Later in the evening the clouds broke away, and the moon shone out clear. Next morning the Sierra and Inyo mountains were seen to be covered with fresh snow. The weather continued warm in the valley, and the rain did much good,

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to
A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

NURSERY STOCK.—Doctor Chapin, Vice-President of the State Board of Horticulture, says: "For nursery stock the freestone peach should be used and not the clingstone for grafts. The prune will not do well on clingstone pits for stock, but the freestone makes a perfect union and is the most desirable, perhaps, for stock in many localities.

SOLD BY TREASURER.—Last Saturday the County Treasurer sold the effects of the late Oscar Bacon. There was but a small amount and most of that was trash. A double barrel of a shot gun and a block of wood brought $7.50; two old blankets sold for $2.50; a silver watch went for $16 and three books were sold for six bits, making a total of $26.75.

INJURED BY A FALL.—Last Wednesday a four year old boy, son of Mr. and Mrs. A. N. Bell, of Camp Independence, fell from the porch in front of his father's mill, and was severely hurt. The little fellow was unconscious for quite a while after he was picked up; his bruises were mostly about the head. He is now getting along very well, and there is reason to believe he has not sustained any permanent injury.

A BIT OF INYO DESERT.—On land recently located on the west shore of Owens Lake, W. K. Miller planted an acre with grape vines the past season. He says not a single vine failed to grow; all the the plants look strong and vigorous and are making rapid growth. Three hundred fruit trees were also set out, mostly peaches and nectarines. Of the entire number of trees not more than four or five failed to grow and the young orchard is now a beautiful sight. On the same tract 100 acres were seeded with wheat and barley; the grain looks splendid and sure to make a heavy crop. A large tract seeded with alfalfa has a heavy stand and will make two or three big cuttings.

Odd Fellows Day.

The proposed pionic by the Odd Fellows at Camp Independence last Monday had to be given up by the very unusual occurrence at this time of year of a continuous and heavy rain all through the forenoon. A number of members of Lodge No. 301, came in to Independence early in the day from the surrounding country, and spent the time till evening visiting with friends. At night a ball was given at Mairs' Hall. A goodly company were present and were so well entertained that no note was taken of the flight of time till the nighthawks scream was stilled by the near approach of ghostly Dawn. The wives of members of Lodge No. 301 had prepared a bountiful supper to which the company were invited about midnight. The occasion served to give all who were present a better knowledge of, and more profound respect for, the grandly beneficent Order of Odd Fellows. The people of Camp Independence would not be baulked of their pic-nic by the rain; they therefore met at the residence of Mr. Connelly and had a jolly good time. The fun was kept up all through the day and far into the night. No where did a happier company meet to observe the anniversary of Odd Fellowship than at Camp Independence. This is how Fred Schabbell tells the story, and Fred can be relied upon.

Racing.

Some discussion having arisen regard- the respective merits of a sorrel gelding owned by H. Giles, and a bay mare of Jack Willett's raising, a match was arranged between the two which came off in the early part of the week. The distance to be run was a half mile, each horse to carry one hundred and fifty pounds. Frank Vinson rode the geld- and Ed. Rose the mare. The horses got away well together; on the turn the mare seemed to have the best of the running; on coming into the stretch the horse was going at too sharp a clip to make the turn and ran out of the track but was pulled in on the outside edge. The mare led until within about fifty yards of out when she attempted to fly the track but was whipped through, though too late to save the race, the Giles horse winning by four feet. A race was then made between a mare owned in Independence and Jules Roper's horse Nubbins. The mare won by an easy length.

Inyo County Flour.

In reference to the quality of Inyo county flour, Messrs. Knapp & Laws, Hawthorne, Nevada, recently wrote as follows to Mr. A. N. Bell, owner of Bell's Mills, at Camp Independence:

Dear Sir:—The flour shipped us by you was duly received, and has been tried. We find it very nice. Not quite so white as that we have been handling but still very nice.

In addition to the foregoing, the editor of this paper can testify that the flour has been tried in his awn family, and with entire satisfaction; lighter, sweeter, or better bread than may be made from Mr. Bell's flour would be hard to find. In reply to the matter of color referred to by Messrs. Knapp & Laws Mr. Bell says a little additional machinery he proposes to add will make his flour as white as any in the State. In all other respects his flour has no superior, and it is folly to send money out of the county for flour that costs so much more.

Nevada Visitors.

Last Wednesday about twenty Indians from Nevada came into Independence. There were four or five squaws in the party; the bucks were all young men, and were very gaily painted a brilliant red, with blue lines pencilled over the red on their cheeks and noses. The company are visiting with Owens Valley Indians, having a "Big Eat," gambling and so on. The visiting Indians have a large wagon in which all of the party travel but four or five, who act as a mounted escort. All were very quiet and respectful when in town and appeared to have a strong desire not to get in the way of any one, or to cause any annoyance to the citizens. These Indians were comfortably and neatly clad, and might even be considered fashionable from the liberal use of paint.

CHARGED WITH BATTERY.—Last Monday C. D. Begole, of Lone Pine, was arrested on a charge of battery. That ever fruitful source of trouble, water, led to the arrest. Charley went into a field belonging to John Lucas and had a dispute with a Chinaman employed by the latter about water being taken from Lone Pine Creek. Charley had a pair of iron handcuffs with him, and with these he banged the Chinaman over the head, leaving marks enough to attest the frequency and vigor of the application. On the trial Begole showed a wound on his arm, which he alleged was done by a blow from a shovel in the hands of the Chinaman. The case was tried before C. Mulholland, J. P., and the jury declared Begole not guilty.

A BEAUTIFUL SPECTACLE.—A most beautiful spectacle was seen along the Inyo Mountains below Independence last Wednesday afternoon. Rain was falling high up on the mountains, the sun was shining brightly over the Sierras in the west, and the Inyos were ablaze with the prismatic colors, brighter and richer far than those usually seen in the rainbow. This display did not assume the rainbow form; the whole rain cloud was illuminated by the bright colors, and seemed to blaze and sparkle like an enormous mass of glass prisms, a gigantic chandelier hung on the mountain side. So brilliant did the cloud appear that its light seemed to be inherent rather than reflected. The glorious spectacle lasted several minutes.

Personal Mention.

Miss Emma Kemp was at the ball last Monday night.

Tom Thomas was up from the Brown Monster last Thursday.

Tom Bastian came in from the Keynot mine on Thursday last.

Mike Lasky and John Anton were up from Lone Pine last Tuesday.

Mrs. J. J. Moore returned home last Sunday from a visit to Big Pine.

Abe Diaz, of Lone Pine was in Independence last Tuesday and Wednesday.

T. J. Goodale, of Fish Springs, was in town at the beginning of the week.

John Anton will begin looking after things at the Maxim mill about Monday next.

Willie Chalfant came down from Bishop and took in the ball on Monday eve.

W. P. Miller, of Alameda, arrived here at the end of last week and stayed several days.

W. K. Miller was up from cottonwood at the beginning of the week, and stayed in town several days.

Miss Laura McMurry came down from Big Pine last Sunday to attend the Odd Fellows celebration.

Joe McDermot came over from Beveridge last Wednesday; he reported eighteen inches of new snow on the summit of the Inyo Mountains.

D. A. Bender, R. J. Laws and J. Yerington, all of the C. & C. railroad, came down to Independence last Monday on a special train to attend the sale of the Elna property. Mr. Forbes, of Hawthorne, was with the party.

C. E. Loose was shot at Bodie on Wednesday of last week by Pat Curtis. Loose was looking at ore on a dump where Curtis was watchman and the latter fired two charges of buckshot from a double barreled shotgun, Loose was seriously but not fatally injured. Curtis was arrested.

WORK FOR THE COURT.—Last Monday morning, pursuant to notice, the Sheriff sold mines and other property belonging to the Owens River Mining and Smelting Company. Just before offering the property for sale the Sheriff was notified by A. R. Conklin Esq., that title to the property advertised did not vest in the Corporation named, but that the entire property belonged to Patrick Reddy. After Mr. Conklin had finished reading the notice the Sheriff proceeded with the sale, offering the property in four separate lots, all being knocked down to D. A. Bender at the nominal sum of five dollars each. The next move is likely to lead to a long contest in the Courts. Personal property at the Elna furnace had been sold to Mr. Bender on the preceding Saturday for five dollars.

SAFE INSECT DESTROYER.—A fruit grower in Florida claims he has discovered a sure and safe remedy for the destruction of insect pests in orchards. He says you might as well put some remedy on your pony that will tan his hide as to put any thing on the tree that will injure the bark, and expect it to thrive. You can drive off the scale with potash, but the only reason it does it is because it puts the tree in such a condition that an insect has too much sense to try to live on it. I wish to make an impression on you that will set you to thinking. I discovered an insecticide some time ago, that with me has proven safe and sure. In tying trees to stakes I used to shield the tree where tied some times with grass and some times pine straw; wherever the straw was there was no scale. I then made up my mind that turpentine was a sure thing. Take one gallon of water and dissolve in it a quarter of a pound of salsoda, then add one gill of turpentine. It will mix, but must be stirred up occasionally, as it will partially separate upon standing. You can use kerosene if you choose. Do not scrub the trees but sprinkle them until they are thoroughly wet. Fertilize the tree with well-rotted hammock trash, mulch it and then let it alone. The tree is sick from neglect or heroic treatment of some kind, and wants new food and rest. I wish you to prepare some of this solution and try it on tender growth and young trees until you are convinced you have the righ proportion and that it is harmless; then if the trees are large take a barrel, put a churn dasher in it to keep it stirred up, put a good force pump on the barrel with twenty-five feet of hose with a nozzle that will throw from a round stream to the finest spray, place your barrel in a cart, with a man to pump, have a man to handle the hose, and in one minute you can saturate the largest tree with a minimum waste of material. It is true that this rig will cost you at least $15, but you can do as much in one day as twenty men without it, and one is enough for a neighbornood.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.
Apply to
HARRIS & RHINE.
Independence.

FOR SALE.—The following goods will be sold cheap for cash. One mower and rake; plows and harrow; fourteen tons of hay; hay forks; bush scythe, hoes etc.; one parlor stove; one dining table and one center table, and other household furniture; thirty head of hogs and five tons of potatoes; must be sold sooner than May 3d.
D. B. CURTIS,
Butte Ranch.

Mining Items,

NEW LOCATIONS.

During the past ten days several new locations have been made in the White Hill District. Jack Welch and Pat Downs discovered a ledge about a mile south of the White Hill mine that shows up bigger on the surface than any other ledge yet found in the District. The new ledge is fully three feet wide and comes up strong to the surface over a distance of six hundred feet. Jack brought some of the ore to town and samples now in the office of the INYO INDEPENDENT prove it to be of fine quality. Without doing any dead work at all, beyond making a trail, plenty of ore can and will be taken right from the ledge for shipment. Several miners who have visited this find are agreed that it will prove a valuable property.

Joining Welch and Downs on the South Eldred, Crough and Hedges have located an extension of the same ledge. This looks quite as good as the other. Mr. Eldred brought down many samples of the ore, and that it will pay is beyond all doubt. These last locators were particularly fortunate in finding a large spring of pure water very near their claim. This is of especial value, as the country is very rugged and, on whole, water is scarce.

BEVERIDGE DISTRICT.

Tom McDonough came over from Beveridge last Sunday. He says recent mining developments on the other side of the Inyos are very favorable; he brought in a very fine nugget of gold found in quartz recently in Hunters Canyon, and says that Bob Mitchell has one very much larger, found in the same place. This gold is found in connection with lead, and some of the ore is very rich. Reube Spear and Bob Carrasco are running two arastras on the ore and have a third about ready to start. A new boiler was recently put in use; it was packed over the mountain in sections on mules and put in place by Mr. Spear. Reube made a good job of it, and the boiler gives plenty of power.

MAMMOTH.

It would appear that there is some prospect of reviving industry at Mammoth. The Alpine *Argus* says: A quartette of miners came to town last Tuesday from the Mammoth mining district, Mono county, to purchase a stamp mill and outfit. They succeeded in securing from Mr. John Weis a mortar and five stamps from the old Advance mill, on the road between here and Mt. Bullion. They will proceed immediately to get the stamps ready for shipment to Mammoth, where they will be erected.

IN LUCK.

A miner named Commetti got permission recently from the owners of the El Plan claim, in Beveridge district to do a little prospecting on his own account. In one month, by his own unaided labor, he took out eighteen tons of ore that netted $85 per ton; total amount, $1,530. Cosmetti got $17.50 per ounce for his bullion. If any one knows where miners have a better chance than in the Inyo Mountains please name the place.

LASKY MILL.

Statement of ores crushed in the last run at the Lasky mill.

Mine.	Lbs.	Ozs.	Value.
Keynot Mine	261,128	309.59	$4633.85
Other Mines	330,587	357.40	5361.00

M. C. LASKY,
April 27, 1885. Sup't.

The Freeborn Canyon mill started up last Wednesday. Joe McDermot and his partners had sixty tons of ore at the mill that would go to a big figure.

A Good Breakfast.

Mrs. E. W. Carpenter, Overlee, Baltimore, county, Maryland, writes; I was greatly benefited by the use of Red Star Cough Cure, when suffering from a severe cold. My cook was seriously ill from a deep-seated cough. She has consulted her doctor without relief. By advice she used the Cough Cure in connection with an external application of St. Jacobs Oil, to her side. In one night the change wrought was most gratifying and astonishing. In the morning she was like a new person.

ANOTHER COMSTOCKER DEAD.—A dispatch from Quijotos, received last evening says; E. M. Chapin, well known on the Pacific Coast, died here fast night of dropsy of the heart. Deceased was a prominent mill man, and built several mills on the Comstock. Most old timers in this section remember "Chape," as he was familiarly called. He was a very genial, companionable gentleman, and all who knew him best will be sorry to learn of his death. —*Enterprise.*

FRUIT PROSPECTS.—Mr. J. W. Symmes, one of the most extensive fruit raisers in the County, was in Independence in the beginning of the week. Mr. Symmes says his peach trees are so heavily loaded with fruit that much will have to be taken off very soon or trees and fruit will be injured. Apples, pears, apricots and nectarines, all are very thick on the trees, Mr. Diaz, of Lone Pine, gives the same report of his orchards, and says his vineyard also gives splendid promise of a fine crop. Mr. Densmore, Mr. Vagt, Mr. Walter and others at Camp Independence, all report their orchards to be in the very best condition. From other parts of the county reports of the fruit crop are equally favorable.

HOW TO GET SETTLERS.

The Efforts Made By Other Counties And The Aid Given By the Immigration Association.

In reply to a communication from the office of the INYO INDEPENDENT, the Secretary of the Immigration Association of California writes as follows:

PUBLISHER INDEPENDENT.—*Dear Sir:* We were pleased to hear from you again and noted contents of your letter. We request you will send us a full and detailed description of the land you refer to as a suitable tract for colonization, including price of land, if private; and if Government land, the exact location in townships and sections, soil, topography, and if level or hilly, climate and temperatxre, how near to railroad, market facilities, what products can be raised, on what terms the land can be secured if in private hands, &c &c. In short, all that will be needed to know to recommend intelligently to capitalists or settlers the section you entertain such favorable opinion of. We have no doubt that your county has many fine tracts suited to colonies, but unfortunately the great distance from San Francisco has prevented us—owing to the limited means at our disposal in proportion to the magnitude of our enterprise in making up settlements in all parts of the State—from making personal examination as yet. The more so as other portions of the State have continually demanded our services; for instance, only lately Fresno and Tulare counties, which have raised a subscription of upwards of $1,500, placed the same in our hands to publish a book about that region, and advertising same largely to immigrants from the east and Europe. We wish your citizens would appoint a committee to raise a fund for immigration and settlement purposes, whereby the necessary expenses may be defrayed in publishing circulars or pamphlets concerning the resources of your county, and advertising same to intending settlers, as is done now by a majority of counties in the State. We have no doubt much can be done to populate and settle your county, but it must be done systematically. We would be willing to coöperate, or take it in our hands.

As to the specific tract you refer to, please send us the detailed description and we will use it in our correspondence with various parties intending to start large colonies in California, drawing their attention to the advantages of your region. Very Truly Yours,
C. H. STREET, Sec.

The Editor of this paper is very desirous of promoting the good of the whole county, and would respectfully ask the aid of every good citizen in doing so. The aid asked for is the communication of such facts as will best show to those at a distance the resources of our county, and its attractions to settlers. Every citizen of the county has a direct interest in this work, and whatever the result may be —and beyond all doubt if we persevere the result will be good—every other person who has one dollar's worth of interest in the county will profit more than the publisher of the INYO INDEPENDENT.

DIED.

CROUGH—At Sonora, Tuolumne Co., Cal., April 28, 1885, Edward Crough, aged 61 years.

—Mr. Crough was a native of Tipperary Ireland. He was a California Pioneer and settled in Tuolumne county in 1850. He mined for many years, and was one of the first discoverers of the rich mines in Columbia district. As age began to tell on Mr. Crough he quit mining, and for several years before his death had been engaged in farming. Mrs. Crough survives her husband; also one daughter, a young lady aged nineteen. There are three surviving sons, two of them being our well known townsmen, Daniel and Thomas Crough.

NEW ADVERTISEMENTS

NOTICE TO TRESPASSERS.

Trappers, gunners and fishers, Indians, Chinese and pleasure seekers.—You are hereby notified to keep off my ranch, as I will not have such herds of people perpetually running over my place, to my great annoyance, and damage to my stock. Don't trespass any more. You have no right to do so and will be dealt with according to law if found hereafter on my place. A word to the wise is sufficient. J. R. TURNER,
49 Lone Pine.

ADMINISTRATOR'S PUBLIC SALE OF REAL ESTATE.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court in and for the County of Inyo, State of California, made on the 30th day of April, 1885, in the matter of the estate of Gilbert C. Gracey, deceased, the undersigned, the Administrator of said estate will sell at public auction to the highest bidder, for cash, and subject to confirmation by said Superior Court, on Tuesday, the 26th day of May 1885, at 1 o'clock P. M., at front door of the Court House in the town of Independence in the County of Inyo, all the right, title interest and estate of the said Gilbert C. Gracey at the time of his death, and all the right, title and interest that the said estate has, by operation of law or otherwise, acquired other than or in addition to that of the said Gilbert C. Gracey at the time of his death, in and to all that certain lot, piece or parcel of land situate, lying and being in the said County of Inyo, State of California, and bounded and described as follows, to wit:

Block number one on the Southeast corner of the Southeast quarter of the Southwest quarter of Section No 6, in Township No 7. South of Range No 33 East, base and Meridian Mt Diablo: Beginning at a point on the east line of the above described land, thirty feet from the Southeast corner, thence North two hundred feet; thence West two hundred and twenty feet; thence South two hundred feet; thence East to the point of beginning, less what has been conveyed to W. B. Hutchings, being twenty-five feet by one hundred feet, and to F. M Randolph, being twenty-five feet by one hundred feet, and to John Clarke, one hundred and twenty-six feet by one hundred feet.

Terms and conditions of sale: Cash, ten per cent. of the puchase money to be paid to the auctioneer on the day of sale, balance on confirmation of sale by said Superior Court. Deed at expense of purchaser.

V. G. THOMPSON,
Administrator of the estate of Gilbert C. Gracey deceased.
Dated May 2th, 1885. 46-49

42 td D. WALKER, Register.

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Isaac Harris and Natnan Rhine, partners doing business under the firm name and style of Harris & Rhine, Plaintiff, against S. S. Barrie, E. Simmons and one Davidson whose given name is unknown, partners doing business under the firm name and style of the Maxim Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 18th day of April A D 1885 for the sum of five hundred and twenty-seven 9-100 dollars ($527 09) besides costs amounting to the sum of one hundred and forty-one 45-100 dollars, ($141.45) duly attested the 18th day of April A. D. 1885, whereby I am commanded to make the amount of $668.54, besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

All that certain millsite known as the Maxim Mining and Milling Company's mill site, together with the five stamp mill and appurtenances known as the Maxim mill, with all the machinery and fixtures thereunto belonging, the boarding house and all buildings on or near said mill site. Also, all that certain mine known as the Chase mine, described in book "C" of Land, Water and Mining Claims, page 38 Records of Inyo county, being 1500 feet in length by 600 feet in width. Also, all the water rights, water works and water pipes, all the above described property being situated in the Union Mining District, County of Inyo, State of California.

Notice is hereby given that on

MONDAY, the 18th DAY of MAY, A. D. 1885,

between the hours of 9 o'clock a m and 4 o'clock p m, to wit, at the hour of 1 o'clock p m of that day in front of the Court House door, in the town of Independence, County of Inyo, State of California, I will sell all the right, title and interest of the said defendant, the MAXIM Mining and Milling Company, in and to the above described property, or so much thereof as may be sufficient to satisfy said judgement and all costs, at Public Auction, to the highest bidder or bidders, for cash in hand in lawful money of the United States

Sheriff's office, Inyo county California, April 25, 1885.

J. S. McGEE, Sheriff,
By J. J. MOORE, Under Sheriff

SUMMONS.

IN THE SUPERIOR COURT OF THE COUNty of Inyo, State of California.

ISAAC HARRIS and NATHAN RHINE, Partners doing business under the firm name and style of HARRIS & RHINE, Plaintiff,

vs.

S. S. BARRIE, E. SIMMENS and one DAVIDSON whose given name is unknown, partners doing business under the firm name and style of MAXIM MINE and MILLING Company, Defendant.

Action brought in the Superior Court of the county of Inyo, State of California, and the Complaint filed in the office of the clerk of said County.

REDDY & CONKLIN, Plaintiffs Attorneys.

The People of the State of California send greeting to S. S. Barrie, E. Simmens and one Davidson, whose given name is unknown, partners as Maxim Mine and Milling Company, Defendant.

You are hereby required to appear in an action brought against you by the above named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer to the complaint filed therein, within ten days, (exclusive of the day of service), after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days.

The said action is brought to recover judgment against defendants and in favor of plaintiffs for the sum of five hundred and twenty-seven dollars and nine cents, being balance due on an account started and for moneys advanced, laid out and expended for defendants by plaintiffs at defendants special instance and request and for interest upon said money so expended and advanced by plaintiffs to defendants, and for goods, wares and merchandise sold and delivered to defendants by plaintiffs at defendants special instance and request between the 30th day of July, 1884, and the 30th day of September, 1884, the aggregate sum of which is $3,820 09, upon which there has been paid the sum of $3293 leaving a balance of $527 09, and for cost of suit. All of which will more fully appear by the complaint on file herein, to which reference is hereby made.

And you are hereby notified that if you fail to appear and answer said complaint as above required the said plaintiff will take judgment against you for the said sum of $527 09, (five hundred and twenty seven dollars and nine cents), and costs of suit.

Given under my hand and seal of the Superior Court of the County of Inyo, State of California this 24th day of February, in the year of our Lord, one thousand eight hundred and eighty-five. W. L. HUNTER, Clerk.

SATURDAY, MAY 2 1885

Men of Talent to Set the Style.

A man need be neither rich, handsome nor shapely to dress elegantly, or even set a fashion. Though a good income is desirable, the art of dressing lies not in expensiveness, but appropriateness, finish, and that illusive something that the world calls style and philosophers character. If not born in a man it can be arrived at only with vast pains, and even then a man will often dress less well than his valet. It is only when garments seem exactly to express a man's true self, unconsciously; when they are at once effective and unaffected; are entirely harmonious, easy and appropriate, and, above all, are suggestive rather than conspicuous, that they are artistic, distinguished and of ethical value. In other words, what looks well on one man won't look well on all men. But only a few recognize the great truth or have courage to practice it. Therefore, the man who dresses to correctly suit himself is certain to produce a result that will be copied by others who admire it without regard to whether it suits them or not. This is how men of talent set a fashion, and why it requries men of talent to do it.

A Ball-Room Predicament.

But of all things at a New York ball, being "stuck" is the worst, and the unfortunate to whom this happens ever after regards it as a black letter evening in his calendar. It is caused by the absurb custom of its being considered rude and not "the thing," after having a dance, to take one's partner to her seat and there leave her; but one must keep with her until claimed by some one else, come he sooner or come he later. With a stranger or debutante it is usually the later. Naturally favorites in society and "beauties" see no reason for a change, as they never feel the fetter; but every girl is not a belle or favorite, and to them the change would be a cause for rejoicing. As it stands at present it has caused many a young girl just out, and perhaps shy and knowing few men, to pass a very solitary and stupid evening, for a man once "stuck," unless very verdant, takes care it never happens again. When the hackneyed conversation between the "stuck" ones returns to the weather for the third or fourth time things are getting desperate, and the needed relief, or rather release, often only comes with the supper call. Why the English system of returning one's partner to her seat or chaperon and going one's way should not be introduced is hard to determine, or, taken in conjunction with the system of "turns," it would enliven the evening for many a wallflower, and perhaps have the effect of scattering the almost impenetrable phalanx of the army of martyrs who adorn the door.

Why Ell Perkins Became a Lecturer

I studied law once in the Washington Law School. In fact, I was admitted to the bar. I never shall never forget my first case. Neither will my client. I was called upon to defend a young men for passing counterfeit money. I knew the young man was innocent, because I lent him the money that caused him to be arrested. Well, there was a hard feeling against the young man in the country, and I pleaded for a change of venue. I made a great plea for it. I can remember, even now, how fine it was. It was filled with choice rhetoric and passionate oratory. I quoted Kent and Blackstone and Littleton, and cited precedent after precedent from the "Digest of State Reports." I wound up with a tremendous argument, amid the applause of all the younger members of the bar. Then, sanguine of success, I stood and awaited the judge's decision. It soon came. The judge looked me full in the face and said:

"Your argument is good, Mr. Perkins, very good, and I've been deeply interested in it and when a case come up that your argument fits, I shall give your remarks all the consideration that they merit. Sit down!"

This is why I gave up law and resorted to lecturing and writing for the newspapers.

A charming young girl, accompanied by her octogenarian great-grandmother, who is all that the name implies, enters a Paris dry goods store.

"How much is this ribbon?" she asks of the polite young clerk, who has bounded agilely over several stools to wait upon her.

"A kiss a yard!" replies the young masher, gallantly.

"Give me ten yards, then. Grandma'll pay you—she always settles the bills when we go shopping.

Blowing the Ram's Horn.

A special feature of the services of the Hebrew New Year is the blowing of the "shofar," or the ram's horn, by the rabbi, which is done twice during the service, and, except on the day of "Yom Kipper," or the Day of Atonement, which occurs on the 28th of September, when the horn is blown once, it is never used in the services. The trumpet is a valuable ram's horn, and its sound is peculiarly solemn and penetrating. The blowing of the horn is intended to awaken the people to a sense of their wrong-doing and to call them to repentance. Atonement is to be made for all wrongs committed, and the season is one of purification for the beginning of a new spiritual life.

At a fashionable ball, Mrs. Gattlefry, who is always careless in expressing herself, approaches Mr. McPeal, and says: "Supper is ready. Why don't you take a lady to eat?" "Be-be--because," replies the stuttering McPeal, "I ner—ner--ner—never e—e—e--eat la—la—ladies." Smart man, but he ought to be killed—[Arkansaw Traveler.

Horace Greely's Horrible Writing.

Horace Greely was a character in his way. Among his many accomplishments was that of writing a very poor hand. He excelled in many things, but in this he distanced all competitors. He was positively without an equal anywhere. No living man, or woman, ever wrote as Greely did. Many incidents in this connection have been related, most of which have proven of much interest to the general reader. Tom Kelley, an old printer, who worked on cases in the *Tribune*, tells the following story, which, he says, was never in print:

"You know," says he, "Greely wrote an awful hand. Them days I thought I could read anything. I was working in Boston, and had heard a great deal about Greely's awful writing. I made up my mind to go to New York and 'tackle it. I went. As it happened, however, there were only two printers on the *Tribune* who could set his matter, and they were given all of it to set. All went well for some days, for Greely was engaged upon his work, a 'Busy Life,' for Bonner's New York *Ledger*. The *Ledger* had no printers that could read his copy at all. Word was given out that two men who could read Mr. Greely's writing were wanted at the *Ledger*. They were to apply to Mr. Greely and make a test. A situation upon the *Ledger* was looked upon as a splendid thing—a soft snap. Several printers invaded Mr. Greely's inner den. I went in, and as I stepped up to his desk, the old man looked up from his writing—and such a look, I never shall forget it. I never saw such an innocent, happy expression on a man's face in all my life. It was the first time I had ever seen him closely, and I almost loved him. His eyes appeared to me like some dear old memory, so happy, cheerful and placid.

"You want a printer or two to work on your manuscripts, Mr. Greely," I said.

"Yes," said Mr. Greely, "two men are wanted who can read my writing. They tell me I write a 'bad hand.'"

"So they say," I remarked.

"Can you read it?" he asked, looking me squarely in the face.

"I don't know, I think I can. I have read almost everything. I have never yet been stumped."

I need not remark I felt very concontident. I was certain I con dread it. I had a very large opinion of my ability in that regard.

"I will try you," he said, at the same time picking up a sheet from the midst of a great pile upon which he had been at work. The page was picked up at random. "Read this," he said, handing the page to me.

I took it and read:

"florid. The menagerie swung over these murderous uneccentric Norman, who had thrown her bat at a doz"—the next word somewhat puzzled me. I stopped, and after looking at it a moment, looked at Mr. Greely. He was all smiles. I thought he was pleased at the progress I had made. At last, however, I had figured out the word, and read on:

"resoated to her most pleasant guard—regrets of these lines, reeking the tympanum, and consoling these on, and wore themselves against it having."

This was the end of the page. I thought it was a little "mixed:" that it didn't read just right; but I had heard that Mr. Greely was eccentric, and that his wording was always odd and profound. I looked at Mr. Greely as I handed back the page. He looked at me, still smiling. He didn't say much, but finally said:

"That will do. You may go. If I conclude to take you I will send for you."

I went out, feeling that I had read the page very nicely.

Several others made trials. John Maguire, now in Boston, made an effort, on the same page; we went in together. Here is his reading of it: "fiends. Her magnetic sway o'er the waveless unconfines of worms who had grown his lest a dog revealed to her the worst glorious gridlle risest o their lines, seeking her syrup and control, thereon, and wear three stitches around at hanging."

* * * * * *

When we had reached the end Mr. Greely was almost wild with merriment. His merriment knew no bounds. He told him what he had told me, a few moments before, and we went out together. I waited patiently for some weeks, fully expecting a call. None came.

Several parties came in as we came out, but what success they had I don't know. However, printers who could "make out" his writing, were found, and the articles began appearing regularly. I kept an idea of that page, and in a few weeks I discovered it, and copied the original. I never knew for four months after that day how very far I had "missed" reading that page. After Maguire and I had compared what we had taken down with it as it appeared in the *Ledger*, we had no more to say about our ability to read anything from a Choctaw's to a Beekman street lawyer's writing. We were very quiet after that. Here is the original page: "friends. Her magnetic sway over these marvelous, unaccountable women who had known her but a day, revealed to her the most jealously guarded secrets of their lives, seeking her sympathy and counsel thereon, and were themselves annoyed at having"

* * * * * *

I haven't seen Maguire since, but I have often thought of that incident. It has fastened itself to my memory with hooks of steel. This is a scandalous fact, believe it or not."

A study and comparison of the ocean temperature records of the Challenger exploring expedition have shown Dr. James Croll that the surface of the Atlantic must be lower at the equator than farther north, the maximum height of the north Atlantic being reached between the fortieth and fiftieth degrees of latitude. This difference is due to the difference in the specific gravity of the water. In the latitude of Havana the Atlantic's surface must be two and one-fourth feet higher than at the equator, and in that of Chesapeak Bay the difference is a foot greater.

JOHNSON'S NEW

UNIVERSAL CYCLOPÆDIA.

"THE BEST."—Planned by HORACE GREELEY, LL.D.

A long great succession of learning have adopted it as THE BEST; yet Harvard, Yale, Brown University, Cornell University, Amherst, Williams, Rochester, Michigan University of Technology, Transylvania, four greatest schools, have declared it to be THE BEST. It is not only the BEST CYCLOPÆDIA, but is a whole library of CURIOUS KNOWLEDGE from the pens of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.

From Hon. A. S. Hewitt, Library of Congress, Washington, D.C.: "Johnson's Universal Cyclopædia is a work which is found in the library of Congress to answer more questions satisfactorily than any other work of reference."

"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL.D.

"Very far the best," etc.—Hon. Alexander H. Stevens, LL.D.

"The best we have," etc.—Hon. Wendell Phillips, LL.D.

Esquimau Baby Life.

When a baby Esquimau's mother makes the hood for her reindeer suit writes Lieut. Frederick Schwatka in the March *St. Nicholas*, she stretches it into a long sack or bag that hangs down behind and is supported by her shoulders, and this bag of reindeer's skin is his cradle and home, where he lives until he knows how to walk, when he gets his own first suit of clothing.

This, however, is while the baby Esquimau is out-of-doors or his mother is making a social visit. When at his home, in order not to trouble his mother while she is sewing or cooking or doing such other work, the little baby is allowed to roll around, almost without clothing, among the reindeer skins that make the bed, where it amuses itself with anything it can lay its hands on; from a hatchet to a snow-stick.

You doubtless think little Boreas should have a nice time rolling around to his heart's content on the soft, warm reindeer skins; but when I tell you more about his little home, you may not then think so. For his winter home is built of snow.

"But won't the snow melt and the house tumble in?" you will ask. Of course it will if you get it warmer than just the coldness at which water freezes; but during the greater part of the year it is so cold that the snow will not melt, even when the Esquimau burn fire in their stone lamps inside these snow houses; so by closely regulating the amount of the fire, they can just keep the snow from melting. In short, it must always be cold enough in their home to freeze.

So you can see that the little Esquimau can not have such a very nice time, and you can't see how in the world he can be almost naked nearly all the day long when it is so cold. But such is the fact.

Yet, in spite of all this, the little fellow really enjoys himself. He gets used to the cold, and has great fun frolicking around on the reindeer skins and playing with his toys; and when I have told you some other stories about the cold these little folks can endure, you can understand how they can enjoy themselves in the snow huts, or igloos, as they call them, when it is only a little colder than freezing.

At times the fire will get too warm in the snow house, and then the ceiling will commence melting—for you all perhaps have learned at school that when a room becomes warmed it is warmer at the ceiling and cooler near the floor. So with the hut of snow; it commences melting at the top because it is warmer there—and when two or three drops of cold water have fallen on the baby's bare shoulder, his father or mother finds that it is getting too warm, and cuts down the fire.

When the water commences dropping, the mother will often take a snow-ball from the floor, where it is colder than freezing, and stick it against the point where the water is dripping. There it freezes fast and soaks up the water just like a sponge until it becomes full; and then she removes it and puts on another as soon as it commences to drip again. Sometimes she will forget to remove it, and when it gets soaked and heavy with water and warm enough to lose its freezing hold, down it comes! perhaps right on the baby's bare back, where it flattens out like a slushy pancake, or on to its face, as it once served me.

One Hundred and Six, and He Drank and Chewed.

His name was James Williams, and he resided just across the Sullivan County line, in Putnam County, Mo. He was a native of Tennessee, and was scarred with the marks of the combats of olden times. Up to the time of his death he enjoyed good health for one of his age, possessed a good appetite and slept well. It was a pleasant pastime with him in later years to boast of having flogged the bullies of Tennessee and Kentucky in his time. He had been entirely blind for the past ten or twelve years. He has ten daughters and one son, Uncle Joe Williams, whose head is silvered with age. For the benefit of sanitarians and prohibitionists, it might be stated that he owned to drinking much liquor, was a constant chewer of the weed, but never smoked.

We call her "Mother England," but she is Aunty-dynamite to Ireland.

A CREOLE MARKET.

The "Marquis" Coffee—Mos' Splendid Coon—Contagious "Dixie."

It has been much the fashion lately to remark, in a tone of intense fatigue, that the French market has been vastly overdone. It is consoling to reflect, in this connection, with one's pen poised for furthther perpetration, that the same languid utterance is invariably upon the lips of society when any beautiful or marvelous, or entertaining thing is under discussion, from the Mammoth Cave to the coliseum. I will spare you our emotions, but nothing else.

"First," said Theophila, "to the Marquis for coffee."

We entered the nearest broad-roofed shed and pandemonium. Absolutely the only human creatures not shouting, singing, beckoning and bargaining, were the half-dozen

STOLID CHOCTAW SQUAWS

That squatted on the pavements in the sun, with their baskets of gumbo filee and other herbs. They were positively non-committal upon every subject, especially that so dear to ordinary humanity—itself. There they sat and shook their brown old faces, half hid in great masses of black hair and said not a word at all. But for Indian taciturnity, Creole volubility made ample amends.

"Get down out o' dat!" cried a Dago game dealer wildly to a dead rabbit placed conspicuously on a bar above his stall, to the vast amusement of the lookers-on. The fellow worked himself into a perfect storm of passion, and at every fresh invective the crowd around him grew larger and more appreciative. At the same stall hung two skinned animals of ghastly appearance and horrible grinning teeth. "Wild cat," said the dealer in response to my inquiry. "To eat!" in horified amaze from Theophila. "Yah, good eatin'—lo' de Chinee!" he answered, with the inevitable shrug and a quick glance of impatience at our unprofitable curiosity. These game stalls and their swarthy, red shirted proprietors make magnificent studies. Rabbits in hundreds, woodcock in festoons, Spanish snipe, blackbirds, "kill-a-dee," teal, "fine nice chicken turkee geese!" even cranes, their great white wings and long legs dabbled in gore, are here exposed for the gastronomic temptation of the multitude.

"What's this?" I demanded of an old dame in a red sunbonnet, gingerly poking a very hairy, defunct animal with my parasol, "a rat?"

"Mais, non!" she returned lately, "if ever you see de tail rat you know very well dat is no rat. Dat is coon—mos' splendid coon."

The only dogs in New Orleans, to all appearances, hang about these stalls, and the red fascinations of these butchers. They are sleek, meek, insinuating brutes, and readily accept the slightest suggestion of intrusiveness. The fish market is a marvel of glancing color. Great heaps of shrimps, snappers, catfish, sheepshead, blue and brown intricacies of crab baskets, the gaslight flashing upon the scales with the most bewildering effect. And the flower stands, each with its comely proprietress, who flirts in the most undisguised manner with every buyer of a button hole adornment. Dewy violets, waxen camellias, starry jasmine and the royal magnolia are among her fragrant wares. And she is everywhere the poetry of the place. Her bent old grandmother presides over the vegetable stand near by, teeming with lettace, spinach, parsley, a riot of greenery. Listen to the cries, beseeching, expostulating, argumentative, chanting: "Get 'em for no money"—two bits"—"Calas, cal—only a nickel!" "Banan' banan' la bella banan!" Beautiful banan', only five five cents de noz!" "Achetez ici au bon marche?" and a long undertone of unintelligible jargon, pierced by the wailing song of a brightly turbaned little gypsy with a face of abject misery, the strains of many hand-organs and the contagious "Dixie" of a blind old negro fiddler. Stands of plaster casts, of cocoanuts, oranges in golden piles, figs on sticks, plates of peas, limburger cheese, are here with their energetic proprietors, whose faces accurately photograph the success of the morning. The sparkle and mobility of the dark-skinned Spaniard whose "banan'" have sold well is only matched by the acute dispair of his unsuccessful compatriot.

THE "MARQUIS,"

When we reach him at last, is among the most radiant. Let who will dispute the title accorded him by these co-exiles of his for twenty years, I for one am entirely disposed to accord it and all the honors and dignities thereto pertaining. A portly old fellow, white haired, straight-nosed, black-browed, clad in the most spotless linen, dark blue coat and fawn colored trousers. And the coffee—served to us with four and twenty furclad Northerners all in a row, a position strongly suggestive of the unhappy blackbirds of nursery fame—was unspeakable. For the sake of the experience we imbibed again, that time taking the dark brown inspiration from the wrinkled hand of another characteristic pillar of the market, an old Creole darky woman who embodied activity and crowned it with a smile. Her zig-zag mouth strayed happily across her face, an ample nose flattened down over it, but her wonderful soft dark eyes, lighted with an irrepressible gaiety, and her fine shawl and knotted turban danced with saucy service, while soft Creole syllables fell thick and fast. The gas jet overhead flared across a marvelous chromo, the pride of her heart, illustrating the intrepidity of a couple of sanguinary militaires in blue and red, conjointly dissecting an unfortunate prostrate man.

"Ah, eets ees beautiful; don't you tink?" she exclaimed rapturously, seeing me tabulate her and her surroundings, and imagining, poor soul, that I chronicled my impressions of her masterpiece.

We strolled leisurely out—I defy anybody to hurry in Louisiana—through the tinning crowd of gaily turbaned Dago women, soft-eyed, hard-mouthed Creoles, black-browed Spainiards, voluble "Gascon" butchers, oratorical hucksters of all sorts and a large mixture of fresh faced commenting Northerners, and sauntered back along the great cotton levee.

Poor Charlotte.

A writer in a recent number of the London *World* says: The recent death of Col. Vandevelde is a great misfortune for the poor distraught Empress Charlotte of Mexico, who has been under his care for many years at the Chateau de Bouchout. The empress was greatly attached to Col. Vandevelde, and his death has not been announced to her. She has been told that he has taken a long journey on business for her brother, the king of the Belgians. She passes much of her time at the piano and at her easel: but since she began to notice the colonel's absence the empress has neither played a note nor touched her pencils. One of her characteristics of her malady, however, is lack of memory, and it is therefore hoped that in a short time she will have forgotten her guardian, even as she seems to have forgotten the whole of her past existence.

She never speaks of Maximilian or of Mexico, nor even of her father, Leopold I., whose favorite child she was. Of late years she has become absolutely indifferent to dress, although in the earlier years of her insanity she was constantly occupied with her toilet, and even while she was living at the Chateau de Tervueren showed a marked tendency toward coquetry. Sometimes she would arrange her smartest dresses upon the chairs, seemingly imagining that she was still the center of a court, and would address the gowns alternately in three or four different languages.

When a little while ago Maximilian's valet—who was with him to the last—himself became insane and was taken to Miramar, she fretted about the poor fellow for a few days and then completely forgot him. The afflicted lady receives the kindliest treatment from all about her, and is frequently visited by the king and queen of the Belgians and the Comte de Flandre.

Fashion Notes.

Cool sleeves take precedence of all others.

There is a return of favor to glace kid gloves.

The skirts of street dresses are worn shorter.

Mantle visites and jerseys are things of fine art.

Gold beaded white laces are coming in vogue.

Plush tea gowns are the preferred wear of London society women.

Cravats are again worn by men, and red ones are the most in favor.

There is a rage for matching all parts of a dress and all its accessories in Paris.

The low catogan coiffure rivals the Lady Teazle with its towering mass of puffs and curls.

Bodices pointed back and front and quite long in the waist are features in spring costumes.

Straw hats heavily trimmed with cloth pinked out on the edges are among millinery novelties.

Changeable surahs are combined with velvet broche surahs in dressy toilets for spring and summer.

What a queer fashion is that which makes French women wear black surah chemises when traveling!

Waists grow longer, basques shorter, collars higher, skirts fuller, hats and coiffures higher, dress less artistic.

New coaching parasols have gilded frames with twenty-four ribs, and are in the shape of Japanese umbrellas.

Tailor-made dresses are now in almost endless variety, and are very different things from those simple ones first made.

Her Choice of the Apostles.

"And so you've named your baby, have you?"

"Oh, yes."

"What is it you call him?"

"Thomas Muscovy Martin Luther Benson."

"The poor little toad! Why did you load it down with so much name?"

"Well, it seemed as though I couldn't slight my own brother, and I insisted upon Muscovy on his account."

"But how about Martin Luther? You wasn't under any obligations to him."

"No, but my husband was determined that he must be named after one of the apostles, and Martin was my choice of the lot."

A Bridgeton, N. J., storekeeper has introduced a rather novel way of drumming up customers, by treating callers to a cup of coffee.

The United States used 1,100,000 tons of sugar during the year 1884.

BLACK-EYED BEAUTIES.

How Women of The West Indies Compare With our Belles.

The upper classes are either Spanish, or creoles, or "Sambos." The former are those who come from Spain—naturalized citizens we call them in North America; the second are natives of the island, of Spanish blood, more or less mixed: the third are remnants of the negro race. A Spaniard can marry a "Sambo," as all who have negro blood in their veins are seriously called, without losing caste. The male "Sambos" often find wives among the creoles, but, seldom among the Spaniards. Some of the best families in Cuba, as well as Porto Rico, have "Sambo" blood in them. The President of Venezuela is a "Sambo," as the President of Mexico is an Indian.

There are many pretty girls to be seen among the lower classes—more in Porto Rico than in Cuba—bright-eyed, jolly, sylph-like beings; as graceful and supple as a panther, timid and modest, but with all the coquettish graces that budding womanhood is endowed with and always has been in all ages and in all latitudes. None of them can read, none of them ever saw the inside of a school house and do not know of the existence of books; they call you an "Americano," but have as little idea of where an American came from as of the composition of the stars; they reply "Se Senor" to everything you say to them and modestly droop their long, black lashes over such eyes as is supposed were the ruin of Antony and were worn

—By that dark queen for whose mere smile
A world was bartered.

These girls—these Maud Mullers of the tropics are beautiful—have an animal beauty that calls for admiration that is genuine and makes them victims of the lust of men and the poverty or avarice of their parents. A gentleman here tells me that he went into the cottage of a Sambo woman in the country one day with a party of ladies and gentlemen to seek shelter from the rain, and, seeing there a beautiful quadroon girl remarked upon her attractions in the mother's hearing.

"She is beautiful," replied the mother, "and Senor Don So and So only last month paid me $150 for her—more than any girl in this village ever got. I bought two mules and five goats with the money."

The belles of the upper classes, those whose languishing eyes and rich bloom have been the topics of so much literature in prose and verse, may be beautiful and natural, but with what they choose to consider artificial adornment they are not. Their eyes are wondrous black and bewitching and to be able to use them effectively is a matter of education. It is said that Cuban women—and by that I mean the whole West Indies—can throw more expression into the glance of an eye than any in existence, but the people who say it have probably flirted with them or seen the glowing of a heart in love. To me their eyes all look alike—beautifully black, sensuously languishing and generally indicative of a bad temper, but otherwise expressionless. They haven't half the expression of the eyes of a thoroughbred horse or dog and are simply evidences of passion, not of intelligence.

And with the eyes, ends the Cuban woman's beauty. She would spoil them if she could, but as she can't she daubs the plaster on her face all the thicker. The chemists here sell a sort of paste made of powdered egg shells, which the women paint their faces with until they have the appearance of plaster images. They take the stuff with them in the cars, to church and to the opera and when they think nobody is looking give their faces a daub. There cannot exist in the mind of any one of them a supposition that this plaster of Paris complexion deceives people, but why they think chalk is beautiful is a mystery. The neck and ears of a West India belle are about ten shades darker than her nose and cheeks. Their mouths are usually large, their lips thicker than is consistent with classic rules, but their teeth are usually white, even, pretty, and well preserved. Although they make sweetmeats, or "dulces," a great part of their diet for breakfast, as well as dinner, you seldom see a woman or a man without good teeth. But the most disagreeable thing about a Cuban woman is her voice. That low, sweet musical tone which is told about as one of the attractions of Turkish beauties is not heard here, nor is the bold accent of the English girl noticed anywhere in the West Indies. The voice of the most refined lady is usually as harsh and rasping as the cry of a parrot and she always talks very loud and in a high key.

They mature early and fade early these tropical women. They either dry up and wither, or else become very obese. There are no beautiful old ladies to be seen, as in all parts of the United States.

Upsetting the Chess-Board.

Enfant terrible—Say, Mr. Snobby, can you play cards?

Snobby—Why, no, Johnny, I can't play very well.

E. T.—Well, then, you'd better look out, for ma says if Emma plays her cards well she'll catch you.

It is estimated that two large parties given in Boston recently were productive of the distribution of $200,000 among artisans and others.

The Smart Station Agent.

There is something about the agent at a country railway station that excites both my admiration and my pity.

When I go to the station for the purpose of taking a train and find him sitting with heels rocked up on the table by the telegraph instrument and his head bowed down upon his breast with the great weight of responsibility that rests upon him—when he starts, as if he had been shocked by some of the current events that are flashing along the wires and looks pained because he is not privileged to communicate them to an anxious world—when he rises and yawns and goes to the ticket-window to communicate to some waiting wayfarer the burdensome knowledge with which he is supposed to be full to overflowing, I admire him.

When a boarding school comes in to embark for home at vacation time, I pity him. About forty girls chattering like magpies and drowning the voice of the telegraph with their gabble, is more than any station agent can bear when he is getting train orders, and I pity him from the profoundest depths of my heart.

I once knew a fair young man whose life was one great job of good promise. He had lifted himself into prominence in the community, and the people had come to believe that one day, he would be one of the most highly respected advocates at the bar or occupants of the sanctum. When he was a mere babe, the old ladies said the Lord had evidently intended him for the ministry, but when he got to wandering away with other people's horses and playing poker, they reluctantly admitted their error and ceased to anticipate that his life would be devoted to pinoting sinners to the skies. They then unanimously decided that he was destined to be foremost among the barristers and other law-evading things, but in the very prime of his promise he became a supe in a railway station and began learning telegraphy.

His fluent and graceful style of prevarication soon won for him the esteem and confidence of his superior, and in due time, the latter could go out on a vacant lot near the depot and pitch horse-shoes with full assurance that the business of the office would be properly attended to and the confiding public kept waiting seven hours after supper time when the train was ten hours late, under the impression that it would be on hand in twenty minutes. The young man applied himself assiduously to his work of self-education and soon became proficient. One day, when he had acquired the requisite knowledge and confidence to run the road, which was about four months after he first entered the office, he sent the following message to the train dispatcher, who called his station to give orders:

"Agent playing mumble peg four blocks away. Shall I receive? P. R. O." Of course he was instructed to receive, as if there were any delay a train would soon rush by the station and go crashing into the rear end of another which had broken down between that station and the next. He did well, and that evening he received an order dismissing his superior and appointing him to fill the vacancy. He was young and inexperienced, however, and in direct time he arose to the sublime height of utter contempt for the public. He strutted about like a sultan and laughed at the anxiety of the people to know when they might expect to get away from the village he seemed to own. When knowledge was wanted, he was more ignorant than Galatea before Pygmalion got mashed on her, and when no flood of intellectual effervescence was desired, knowledge seemed to fall from his lips like bricks from an overturned hod. He seemed to be master of the situation, and all the complaints of indignant shippers and the pleadings of a long-suffering people could not shake him from his impregnable abode in the heart of the management.

One day, a gentleman who was managing editor of a cattle ranch in Colorado came to the station. He made certain inquiries concerning the running of trains which the agent was not prompt and obliging in answering, and the cow-general spoke of him in terms that were not remarkable for their freedom from innuendo. The young man replied in his customarily concise style, and in about a fraction of a second, the atmosphere of the room was saturated with smoke, noise and an odor of burned powder.

The next day, his perforated remains were placed in a black walnut box and hauled away to the village surrying ground, and there they now lie, joining their kindred dust and enjoying the other privileges and compliments of the season, while there is a meek and lowly young man with four revolvers and a look of unutterable woe concealed about his person looking after the affairs of the railroad in that village. The cow-commander has been acquitted of any evil intent, and carries in his hip pocket a set of handsomely engrossed resolutions of condolence and profound respect.

A rich man, who had been to a poker party, dreamed that night he had a "straight flush," but had six cards. In the attempt to throw away the sixth card he struck his wife on the nose, who, being aroused and confused, asked:

"Did you call?"

"Call, thunder! I raised you;" then, becoming wide awake and ashamed of himself, added, "but I am sorry I did it, my dear; it was an accident."

TRAVELING.

SATURDAY, MAY 9 ..... 1885.

C. Mulholland,
EDITOR & PROPRIETOR.

GRASSHOPPERS, in swarms are making havoc of every growing crop in the amento valley between the mountains and the Sacramento river. Much alarm prevails among the farmers and fruit raisers.

THE English army is evacuating the Soudan. The lauaels of General Wolseley have been badly torn by Arab spears. Taking vengeance on the slayers of General Gordon has been "indefinitely postponed."

LAST Saturday a fire broke out in a tenement house on First Avenue, New York. Quite a nnmber of people perished in the flames, and others were maimed or killed by jvmping from the burning building.

BECAUSE General Grant is recovering the doctors who pronounced him incurable are roundly abused. It should not be forgotten that though the doctors may have been mistaken in the character of the disease, yet without their care and skill General Grant would certainly have died.

OF ALL the wonderful things in connection with office seeking, none are more remarkable than the appointment of Berthold Greenebaum, of San Francisco, to a consulate. This man was so eager for office that his friends represented to the President that he would go crazy if an appointment were not given him. He has been made consul at a remote island in the South Pacific ocean at a salary of $1500 a year. A more sensible man might be in danger of losing his mental equilibrium if he were banished to such a place.

LUCKY Baldwin has struck a streak of the same kind of luck that has made Sharon so notorious. A girl named named Perkins is after him for half a million dollars, alleging that he promised to marry her before he married Miss Bennett last year. This young woman of twenty is evidently no novice in evil; she claims to have maintained illicit relations with Baldwin when she was yet but little more than a child. Of course she says the relation was based on a promise of marriage; that is the usual story.

IT IS a great pleasure to hear a man frankly acknowledge how much he is indebted to his wife for whatever of success he may have in life. A few evenings ago a few friends met at Independence, and were talking about life and its cares; fn the course of the conversation it was said: "Mr. D——, you are raising a nice family." He replied: "I am not raising a nice family; whatever of merit or virtue they may have they owe it to their mother; she is raising them." Dear mothers—dear wives—whatever of goodness or virtue there is in the world it all comes from you. Men who have lived secluded from the society of women—in the wilderness, the camp, or on the sea—know how quickly all the finer virtues fade away and brutality and vulgarity take their place. Burns was not less of a philosopher than a poet when he wrote:

"Auld Na ture swears the lovely dears
Her noblest work she classes, O.
Her 'prentice han' she tried on man,
And THEN she made the lasses, O.

A CICRULAR issued by the State Board of Health, says that by the disgraceful parsimony of the late Legislature in sanitary matters, the Board is unable to give to the whole people the warning and advice necessary by a threatened visitation of cholera. The Board therefore "appeals to the generosity of the press to give the contents of the circular that publicity which it alone can do." The information is contained in a pamphlet, too long for publication, but the gist of the whole is, to keep dwellings and all their surroundings clean, be sure that water used for domestic purposes is free from all impurities, do not allow decayed vegetation to remain in cellars, do not eat unripe or stale fruits or vegetables or tainted meats, make liberal use of disinfectants and deodizers in privy vaults and drains if diarrhea sets in administer a teaspoonful of paregoric at one, put the patient to bed, apply warmth to the feet, a mustard plaster over the abdomen and continue the pargoric till the doctor arrives, who should at once be sent for when the symtoms are first noticed. Do not give indiscriminately, stimulants brandy, red pepper, camphor, ginger etc, advised by busy-bodies, wait for skilled medical advice—more people are killed by quackery and meddlesome trifling than by disease. The circular further says that habitual drinkers are the first to fall victims to the disease. Copies of the pamphlet can be had by writing to the Secretary of the State Board of Health, G. G. Tyrrell M. D. Sacramento.

THE latest indications are in favor of peace between England and Russia. The result of proceedings thus far has been a substantial gain for Russia. That Government has a purpose that is steadily pursured; the policy of England fluctuates with changing adminstrations, but with Russia one Emperor succeeds another and continues the remorseless and unchanging course of extending the boundaries of the Empire

NOTICE IS HEREBY GIVEN THAT THE following-named settler, has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Honorable Superior Judge of Inyo County, California, or in his absence before the Clerk of said Court, at his office, at Independence, California, on TUESDAY, May 26, 1885, viz: Raphael Diaz, for the S ½ of S E ¼, Sec. 4, & N ½ of N E ¼ Sec. 9, Tp 16 S, R 36 E, M D M.

He names the following witnesses to prove his continuous residence upon, and cultivation of, said land, viz: W. L. Hunter, J. C. Irwin, N. Rhine, and O. J. Mairs, all of Independence, Inyo county, Cal.

D. WALKER, Register

ADMINISTRATOR'S PUBLIC SALE OF REAL ESTATE.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court in and for the County of Inyo, State of California, made on the 30th day of April, 1885, in the matter of the estate of Gilbert C. Gracy, deceased, the undersigned, the Administrator of said estate will sell at public auction to the highest bidder, for cash, and subject to confirmation by said Superior Court, on Tuesday, the 26st day of May, 1885, at 1 o'clock P. M., at front door of the Court House in the town of Independence in the County of Inyo, all the right, title interest and estate of the said Gilbert C. Gracy at the time of his death, and all the right, title and interest that the said estate has, by operation of law or otherwise, acquired other than or in addition to that of the said Gilbert C. Gracey at the time of his death, in and to all that certain lot, piece or parcel of land situate, lying and being in the said County of Inyo, State of California, and bounded and described as follows, to wit:

Block number one on the Southeast corner of the S utheast quarter of the Southwest quarter of Section No 6, in Township No 7, South of Range No 33 East, base and Meridian Mt Diablo: Beginning at a point on the east line of the above described land, thirty feet from the Southeast corner, thence North two hundred feet; thence West two hundred and twenty feet; thence South two hundred feet; thence East to the point of beginning, less what has been conveyed to W. B. Hutchings, being twenty-five feet by one hundred feet, and to F. M Randolph, being twenty-five feet by one hundred feet, and to John Clarke, one hundred and twenty-six feet by one hundred feet.

Terms and conditions of sale: Cash, ten per cent. of the puchase money to be paid to the auctioneer on the day of sale, balance on confirmation of sale by said Superior Court. Deed at expense of purchaser.

V. G. THOMPSON,
Administrator of the estate of Gilbert C. Gracey deceased.
Dated May 2th, 1885. 46049

SHERIFF'S SALE.

BY VIRTUE OF A WRIT OF EXECUTION issued out of the Superior Court in and for the County of Inyo, State of California, in the suit of Isaac Harris and Nataan Rhise, partners doing business under the firm name and style of Harris & Rhine, Plaintiff, against S. S. Barrie, E. Simmons and one Davidson whose given name is nnknown, partners doing business under the firm name and style of the Maxim Mining and Milling Company, Defendant, upon a judgment rendered in said Court on the 18th day of April A D 1885 for the sum of five hundred and twenty-seven 9-100 dollars ($527 09) besides costs amounting to the sum of one hundred and forty-one 45-100 dollars, ($141.45) duly attested the 18th day of April A. D. 1885, whereby I am commanded to make the amount of $668.54, besides accruing costs and interest, I have levied upon all the right, title and interest of the said Defendant in and to the following described real property, to wit:

INYO INDEPENDENT.

INDEPENDENCE, CAL.:
SATURDAY, MAY 9 1885

—Sharp rain shower on Tuesday afternoon.

—It is said that John Mackay is willing to put in $25,000 toward having reduction works at Reno.

—Young January, who robbed the State Treasury, has been tried at Sacramento and found guilty by the jury.

—A small paper, devoted to the saving of children from crime and degration, has been started at San Francisco. It is called the *Child and State*.

—It is said that H. L. Childs has resigned the position of receiver of public money at the Land Office at Bodie.

—There is great excitement in Mono caused by what is believed to be the discovery of large deposits of tin ore.

—The Superior Court of Mono county was occupied up to latest reports with the trial George M. Lee for an assault to commit murder.

—Judge Hannah has been luxuriating on splendid strawberries for two weeks past. The Judge is a success as a gardener and fruit raiser.

—It is reported that the missing man Van Sickle, was goaded to absconding by the bad temper of his wife. Mrs. Van Sickle has not been heard in reply.

—Tickled? why he was the tickledest man you ever saw. "Come on, boys," he shouted, "and take something; its a boy;" and the boys took. See birth notice.

Mr. Walter has made many handsome improvements on his place at Camp Independence this spring. New paling fences, flower beds and arbors attract the attention and admiration of every passer by.

—Last Monday a big beer brewery in Pittsburgh fell down. It contained 10-000 barrels of beer, most of which were burst and the beer ran into the sewers. What a lot of dry throats that amount of beer would have wetted! Joe Fernbach has plenty just as good.

—Mr. John Baxter is making many improvements, inside and out, on his dwelling house. What with orchaed planting and other improvements Mr. Baxter is rapidly making his home and its surroundings one of the most attractive in the county.

—Last winter Mr. W. L. Hunter ound pear trees on his place at Lone Pine all covered with a minute red insect; he sprayed the trees with water from Owens Lake and the insects all disappeared; The trees are now looking vigorous and healthy and have a heavy crop of pears.

PAY UP.—Having gone out of business I desire to settle up all accounts immediately. Parties indebted to me will please pay up their bills without further notice. J. R. ELDRED.

PESTS.—Last Saturday we noticed some apple trees at Lone Pine affected by wooly aphis. If this pest is not attended to at once the result will be disastrous. For a remedy look in the INYO INDEPENDENT of May 2d.

ANOTHER STRAIN.—A fine polled Galloway bull rising four years old was brought up from Kern county by Mr. Connelly for Mr. O. I. Mairs, who will turn out the animal with his band on Owens River.

STOCK FOR SALE—The following stock is offered for sale, namely, 150 to 160 head of fine stock cattle. Also, one fine stallion; one jack, weighs 950 to 1000 pounds. For particulars apply to
A. K. BRIGGS,
Bishop Creek, Inyo Co., Cal.

PROVED UP.—E. H. Blake has proved up on his homestead at Big Pine. Mr. Blake settled on the land about nine years ago, and by industry and care has it in a good state of cultivation. Young fruit trees planted by him will soon make a fine orchard, and he has all the requisites for making a very pretty home.

RANCH FOR SALE.—The Ranch known as the D. B. Curtis ranch, is now for sale or rent on reasonable terms. This ranch contains about 400 acres, is favorably located and has good water privileges. Plenty of good fruit, including apples, pears and peaches. Good grain land and a large area seeded to alfalfa.
Apply to
HARRIS & RHINE.
Independence.

ALMONDS.—J. J. Steward, of Lone has a few softshell almond trees now bearing fruit. The trees now carry an immense crop and the fruit looks remarkably well. From nectarine trees in the same orchard Mr. Stewart has been forced to take off large quantities of fruit this season, as the limbs were already bending down in a way that threatened injury.

MINING EXTRAORDINARY.—Two prospectors have located an old graveyard in Lyon county, Nevada, as a mining claim. The Lyon county *Times* says: "It is rumored that the parties who have located the ground have information which leads them to believe that upon the bodies of two stage robbers who were buried in this cemetery several years ago there was a, considerable amount of gold coin. The graves of these dead robbers, through neglect, have been obliterated so that it impossible to tell where they are; the people who have friends buried there of course refused to allow the locators to dig up the bodies promiscously, and so the ground has been located as a mineral claim and will be thoroughly worked over by the prospectors in search of gold already coined into money.

Tourists.

Last Tuesday a party of tourists arrived at Independence. The party consists of Mr. and Mrs. Wittich, of Ohio, and Mr. and Mrs. Stewart, of Los Angeles, from which place the present trip was begun. They are traveling for health and pleasure, and journey very leisurely. They have two very fine covered wagons, a camp stove and many other conveniences. They laid over a day or two at Independence, and as Mr. Wittich is a very fine pianist he helped much to the enjoyment of others beside his own friends. The party will follow north along the mountains to the Sonora Pass, where they will cross, and go to Yosemite and other points of interest, and then on to San Francisco, thence to Los Angeles. Thus far the trip has been very pleasant.

Equal Terms Given.

An officer of the Nevada State Agricultural Association, writes to the INYO INDEPENDENT as follows: "We are to have a Fair here [at Reno] and your people are invited to be exhibitors and participants upon equal terms with ourselves. I will send you addresses, circulars, rules &c., as they are issued. I want to come down and see your country, when your mountain rills are at their highest and running off their greatest volume of water; please inform me when to come." With the proposal to give Inyo county equal rights with Nevada exhibitors there is every reason to expect that we should carry off many of the best prizes offered by the Association. We can do it, too, if we make a reasonable effort.

State Agricultural Society.

A meeting of the Nevada State Agricultural Society was held at Reno last Saturday, the following Directors being present: President Stevenson, Messrs. Evans, Huffaker, Leete, Bailey, Marsen, Dangberg and Powning. It was decided to have a State Fair for one week, commencing October 12 and ending on the 17th, and to offer purses and premiums of the value of nearly $20,000, and issue an address to the people to an interest by exhibition and appearance. Committees were appointed to prepare the premium list and racing programme, and to report at the next meeting, which will take place on Saturday, May 9, to which time the Board adjourned.—*Enterprise.*

FOR SALE.—The following goods will be sold cheap for cash. One mower and rake; plows and harrow; fourteen tons of hay; hay forks; bush scythe, hoes etc.; one parlor stove; one dining table and one center table, and other household furniture; thirty head of hogs and five tons of potatoes; must be sold sooner than May 3d.
D. B. CURTIS,
Butte Ranch.

THROWN.—When on his way from Bishop Creek to Independence last Wednesday, Mr. J. H. Shannon got thrown from a saddle horse he was riding and was considerably bruised. Mr. Shannon had dismounted at Fish Springs to let the animal drink and when he remounted the horse bucked and threw him. Mr. Shannon was able to continue his journey after a little rest.

GRADED STOCK.—T. F. A. Connelly arrived at Independence last Tuesday, with ten young bull for Mr. Rawson's herd. The animals are high grade shorthorns and were bought from Mr. Rankin, in Kern county. Mr. Connelly took fourteen days coming two hundred miles. He says that fifty head of beef animals recently taken from Mr. Rankin's herd, no one of which was over two years old, when dressed averaged 613 pounds.

TAKING TESTIMONY.—During the past few days counsel have been busy at Independence taking testimony of witnesses in a suit pending with the Owens River Mining and Smelting Company. The witnesses have been called from all over the county, and the object of examining them is to prove in what relation Mr. Minear stood to the company; whether or not he was their Superintendent and accredited agent. The evidence will be transmitted to San Francisco.

MILDEW.—At Lone Pine peaches are quite generally affected by what appears to be a kind of mildew. The fruit has large white blotches, and on looking through several orchards we found very few peaches that were not affected. The fruit is making rapid growth, and on being cut open no signs of disease are apparent. Perhaps an application of sulphur, applied early in the morning would be an effective remedy. Around Independence no traces of mildew have been seen or reported.

THE BETTER CLIMATE.—The party of tourists from Los Angeles, who passed through Independence this week, think the climate of Inyo county far better than the climate of Los Angeles. They say that in the latter county every evening after sun set the air is damp and chilly, making extra wraps necessary if one is out doors, while here in Inyo the air is warm and balmy the whole night through. These people think that as a sanitarium Inyo county is far to be preferred to any other place they have seen in the state.

A TIN MINE.—The Carson *Inaex* says: From a private letter we learn that a tin mine has been discovered in Antelowe valley, Mono county, California, about 52 miles from Carson. The discovery is thought to be very valuable and the writers states that there is immense quantities of the ore in sight. The ore was tested, and pronounced to be tin ore, and that of a very valuable kind. The correspondent states that whole country is excited and that locations are being made in all directions. The writer believes it to be one of the greatest discoveries on this coast. There is large quantities of the ore around the hills and future developments will be awaited with interest.

ORDER FOR DISMISSAL.

The following is the order of Judge Arnot for the dismissol of the Silva case.

"In the Superior Court of the County of Inyo, State of California.

"The people of the State of California, vs. Frank Silva.

"At the last sitting of the Court in this case, the District Attorney of Inyo county moved the Court to dismiss this action for the reason that 'the case having been once tried, the jury having failed to agree upon a verdict, and on account of the excitement and prejudice which exists in the minds of the citizens of this county, it will be impossible to get a jury that will agree upon a verdict of guilty, and upon the further ground that under the testimony in this case it would be impossible to get a jury to convict.'

"This application is made under Section 1385 of the Penal Code of California which provides that 'the Court may of its own motion, or upon the application of the District Attorney, and in furtherance of justice, order an action or indictment to be dismissed * * *

"The Statute does not recite, nor do any decisions of the Courts direct what showing is required to be made to the Court in moving it to exercise its judicial discretion upon an application like this, but in as much as the old practice of entering a *nolle prosequi* is now abolished. It is presumed no stronger showing is required under the above Section than was required under the former practice of ordering a *nolle prosequi*, which in all the cases the Court has examined was done on the mere motion and statement of the prosecuting officer.

At this hearing Counsel for defendant in response to an inquiry of the Court stated that his client would in no doubt be pleased—in view of his circumstances—to have this application granted, so practically, both sides of this cause move its dismissal.

"In justice however to Counsel asaociated with the District Attorney, it ought to be here stated, that Judge Conklin desired to have his protest against the granting of this motion entered upon the minutes of the Court.

"From the statements made to the Court by the District Attorney, from facts within the knowledge of the Court, of which it has a right to take judicial notice, the Court is of the opinion that such excitement and prejudice now exists in the minds of the citizenstof of Inyo county that this defendant cannot be convicted of the offense charged. Such a state of the public mind is to be deplored.

"The Court knows of no law authorizing a change of the place of trial in this case except upon motion of the defendant himself, and so it appears to this Court that this case comes clearly within the intended provisions of Section 1385, and is one in which its provisions may be properly worked. It follows therefore that the motion must be granted. It is therefore ordered that this action be dismissed upon the grounds first given by the District Attorney, to wit: on account of the excitement and prejudice which exists in the minds of the citizens of Inyo county it would (in the opinion of the Court) be impossible to get a jury that will agree upon a verdict of guilty.

"The further order is hereby made that the defendants bail be exonerated and the reasons above given by the Court for dismissing this action be entered in the minutes of the Court according to law. N. D. ARNOT.
Superior Judge.
Dated April 29 th 1885.

Personal Mention.

J. H. Bulpit, of Bishop Creek, was in town this week.

Mr. J. Smith was down from Big Pine a couple of days in the middle of the week.

John White came up from Darwin last Monday and remained several days in town.

Miss Emma McMurry of Big Pine is at Independence on a visit to her sister, Mrs. Moore.

J. H. Stoutenborough Jr. came down from Bishop Creek last Sunday, and has been at Independence all the week.

George Shedd was in town last Thursday giving testimony in the case of the Owens River mining and Smelting company.

Mr. Edward Riley, of New York, arrived at Independence at the end of last week and remained all through the present week.

Mrs. N. A. Bogart arrived at Big Pine last Monday, from Quincy, Illinois. Mrs. Bogart is the mother of Mr. E. H. Blake; she is a widow and will make her future home with her son.

Joseph Schalten, of Big Pine, is reported to be again suffering from his old complaint, asthma. The condition of Mr. Schalten causes great anxiety to his friends.

Doctor Blair started for San Francisco last Thursday morning, to attend the meeting of the Grand Lodge of Odd Fellows as delegate from Inyo Lodge No 301. He was accompanied by Mrs. Blair and the Misses Julia and Maud Cook who expect to remain in the city for some time.

MAY DAY FESTIVITIES.—May Day was celebrated at Lone Pine by a pic-nic. There was a large gathering of people during the day and all had a happy time. At night there was a ball at Richards & Castro's Hall; this was a very pleasant affair, the pleasure being in a great measure due to the very fine music given by Messrs. Celayo & Castro. At midnight Mr. Reynolds, of the Lone Pine Hotel, supplied the company with a toothsome supper, after which dancing was resumed and continued until near daylight. There was quite a large attendance from Independence, and these were particularly pleased with the trip.

Mining Items.

MAXIM MINE

Nothing has been said of an experiment in treating glena ores for shipment, now in operation at the Maxim mill. Mr. W. Stansfield concluded that the vast quantities of low grade ores in the neighborhood of the mill, that in its present condition would not pay to ship, could be crushed by stamps like ordinary quartz, the pulp concentrated to high grade, and then it would pay to ship. He got the necessary machinery some weeks ago, and though at first some difficulty was experienced in perfecting the concentration, it is believed all hindrances have been overcome, and henceforth these ores can in this way be made to pay good returns. As there are tens of thousands of tons of such ores found all along the Inyo mountains, this experiment of Mr. Stansfield is of the first importance to the whole county, and we heartily congratulate him on the success he has already achieved. Mr. Stansfield had for a long time held the opinion that this method of working low grade ores was quite feasible, and before entering upon the work at the Maxim, had explored much territory to find a suitable place for making the experiment. He traveled over Arzona, much of New Mexico, nearly all over Nevada, and California from the gulph on both sides of the Sierra, to Lake county on the coast. After all this exploration he was satisfied that here in the Inyo mountains, more and better ore, and better facilities for mining, working and shipping existed, than could be found elsewhere on the whole Pacific coast. This method of treating these ores is almost certain to grow to large proportions.

GAVILAN.

A crushing of eighteen tons of ore from the Gavilan mine was made some days ago at the arastra at Hunter's Canyon. This is the ledge belonging to Cohn & Straus that was discovered last fall. The ore yielded $43 per ton. The cost of mining was $4 per ton; packing the ore to the arastra, $6 per ton; crushing, $10 per ton; total cost, $20 per ton, leavnig a margin of $23 per ton. The ledge is four and a half to five feet wide, and stands up in the side of a deep canyon, exposing a large amount of ore.

LOOKOUT.

Office of Superintendent Modock Con. Mining Co., Lookout, Inyo county, Cal., May 1, 1885. J. W. Pew, Sec.
Dear Sir:—I start furnace on the 10th inst. Everything in and around the mine is looking well. Daily output of ore from South Lookout is six carloads. Have resumed sinking main winze, South Lookout; nine miners employed.
Yours Truly,
FRANK FITZGERALD,
Lessee.

COLUMBIA MINE.

The Columbia is one of the most promising mines of the Darwin district. Frank Silva is getting out ore the best of which will go 120 ounces per ton in silver and 70 per cent. lead; this he is sorting for shipment. There is much ore in this mine that will go from 35 to 40 ounces in silver.

The last shipment of bullion made by J. C. Eddy from Snow's Canyon was of the value of $2,641. The bullion was of silver, 987 fine, and contain- $72 in gold. Two or three times each month Mr. Eddy ships small lots of gold ranging from twelve to thirty ounces. Most of this comes from Old Coso district. Other parties at Darwin ship about as much more.

Last Monday Billy Hedge brought down some samples of ore from the mine owned by himself, Dick Eldred and Dan Crough. It is very fine looking ore. The vein is found over the whole of their claim, and also over the claim of Welch and Dons adjoining. All of these parties are getting out ore right along.

The shipments of little dabs of gold from Lone Pine during April aggregated about $13,400. Most of the metal came from Beveridge. This is quite a nice little sum to be added to the business of a village during one month.

John Alexander came down from the White Hill mine last Wednesday. He says the mine continues to show up quite as well as at any former time.

CELESTIAL HARMONY.—Last Tuesday evening two celestials, You Hoo and Ah Sing, had a fraternal exchange of courtesies at Independence. You Hoo attempted to carve up Ah Sing with a hatchet. District Attorney Laird was passing at the time, and hearing the row, entered the house and found Sing with a number of ugly cuts upon his head. Next day You was arrested and taken before C. Mulholland, J. P., when he plead guilty to a charge of battery and was fined fifty dollars.

DANGEROUS HURT.—On Wednesday of last week O. B. Wilson, better known as "Bennet," went fishing on Big Pine Creek. When about two miles above Big Pine Mr. Wilson was crossing the creek; he made a leap from one large boulder to another, slipped and fell, breaking one of his thigh bones close to his body. Several hours passed before any one came that way, and the injured man lay helpless and in great pain. Chris. Engle was passing near the place along toward evening, and hearing groans of distress he followed the sound till he found Wilson. Engle then hastened to town and sent back men and a wagon and Mr. Wilson was brought in. A messenger was despatched to Bishop Creek for Dr. Middleton who hastened back as swiftly as good horses could carry him. The Doctor reports the injury to be of a very serious nature.

SUPERVISOR'S PROCEEDINGS.

MONDAY, May 4, 1885

On the above named day the Board of Supervisors of Inyo county met at ten o'clock a. m. Present, T. Boland, Chairman, J. D. Blair and J. C. Eddy.

INDEPENDENCE, CAL.:
SATURDAY, MAY 9 1885

Rays of Mirth.

Cut down—The results of his first shave.

The literary man always has write on his side.

A cologne bath is a sort of a penny dip. It is one for a scent.

A man who makes money hand over fist—the prize-fighter.

Mormons ought to be good sailors—they have so much marry time experience.

There's one line that every woman delights to hang on—the masculine.

"Alonzo" asks for a "cure for love." Marriage, Alonzo, marriage.

The lay of the land in Montana is very high. That is, eggs are there quoted at ten cents each.

Were Solomon alive he might give Sullivan some sound advice, such as "Go to thy haunt, thou slug-hard."

It is said that there is a soft side to every man. That's the reason a dude is afraid to stand on his head.

People who go up in a balloon together are generally conceded to be considerably "taken up with one another."

A good printer is a man of the highest type. He sticks to his case, and makes it a rule never to be out of sorts.

It is a very easy thing, even for the most ignorant man, to be an author of note if his name is worth anything.

"A man who never knows," says a writer, "when an idea is going to strike him." The same is true of icicles.

As a title can now be bought in Europe for $500 there is no reason why any more American heiresses should marry organ grinders.

"Is Mrs. Blank a very cold woman?"

"I don't know; why do you ask?"

"Oh, because she always has an 'I see' air about her."

Crabb Robinson says that Goethe never had an affliction which he did not turn into a poem. Some writers never have a poem which they do not turn into an affliction.

In Ceylon, the promise held out to women to be good and act pretty, is that in the happy hereafter they will become men. No wonder the Ceylon women are not remarkable for sweetness of temper.

Æsthetic philosophical lecturer to his hearers: "People deride skepticism. Can you tell me what skepticism is?" Unterrified optimist, with idiotic literalness: "I suppose it is denying a truth that you don't believe in favor of a lie that you can't believe."

"Yes," said pretty Miss Snooks, as she came home from a party at 5 A. M.., "I was determined to be the last to leave. I hate that horrid Mrs. Blinks so I was resolved she shouldn't have the pleasure of slandering me after I'd gone."

Joseph Cook says that in A. D. 2400 the population of the United States will be 3,200,000,000. Those of our readers who contemplate going to the circus that year will do well to purchase tickets at the down-town office and avoid the rush at the wagon.

"Nurse," said a penitent Western miner, as he lay in the hospital after an accident, "I'll never draw a revolver on a man again as long as I live." The nurse expressed her pleasure in this moral resolution, when the patient went on to say: "Guess I'll go for the galoot with a two scatter shoot-gun."

A Chicago critic revives the old slander that "Henry Irving's legs are poems." They may say what they please about Henry's legs, but, unlike most poems, his feet are all right. —This is another mistake. One of them must be left.

"Papa, didn't you say if I was a good boy you would give me a cent?" queried a 7-year old.

"Yes, my son," blandly replied paterfamilias.

"Well, then," said young hopeful, "couldn't you make it payable in advance?" He got his cent.

"A scientific Frenchman says he has discovered a new process of making artificial brains," said Mrs. Wigglesworth, looking up from the paper she was reading. "Artificial brains!" sniffed Mr. Wiggleworth scornfully; "that's just like those nonsensical Frenchmen, always fooling away their time making something artificial. What I want is real brains—none of your make-believe nonsense." Mrs. Wigglesworth, as she resumed her paper, demurely murmured that she had noticed it, too, but she never should have dared to speak of it herself. And Mr. Wiggleswoth rubbed his head in a dazed sort of fashion, and wondered if he really had expressed himself just as he meant to.

The Hat.

One of the church-wardens was observed to cast uneasy glances toward an individual wearing a sailor jacket and cap of a seafaring and jaunty appearance, which latter surmounted a clean shaven face and closely-cut hair. After a little while he approached the sailor laddie and whispered audibly:

"Can't you take off your hat? Is there any reason why you can't take off your hat?"

By the discomfited look of the questioner as he returned to his seat, and the appearance of the rest of the costume as the wearer of the hat walked out of church at the conclusion of the service, it was evident that the whispered reply was, "I am a girl!"

Little Polly has a neighbor who has a little donkey team, in which she often has a nice ride. One day as she was sitting with her mamma the donkey was heard to bray, and Polly, looking up said: "Mamma, I like the donkey; but I don't like to hear him donk."

GEORGE WASHINGTON.

The Frolic of Some Continentals at Valley Forge.

E. W. B. Conning, of Stockbridge, writes as follows: In the year 1835 I was traveling in Western Virginia over the old National road from Baltimore. I was one of three inside passenger, my companions being two elderly gentlemen of fine appearance and general information. A stripling and an entire stranger to the country through which we were passing, I listened with great interest to their general conversation. One of the gentlemen avowed himself the son of a Revolutionary officer—a Pennsylvanian—who fought at Germantown, knew Washington intimately and was with the army during its memorable winter's encampment at Valley Forge. When a boy he had often heard his father tell an anecdote of our great commander that occurred at that time, which he proceeded to relate. It was known throughout the army (and is now a matter of history) that Washington was an exceedingly methodical man, having a stated time for every action, public and private, of his daily life. At his headquarters at Valley Forge it was proclaimed in general orders that the hours between 11 A. M. and 2 P. M. was sacred to the General's privacy and must not be interrupted by any caller, except upon business of the utmost importance. This strict ordinance became one day the topic of conversation at the mess table of some young officers, one of whom wagered ten dollars that not a man at the table dared venture to disturb the General in his rooms during those hours. It was taken in a frolicsome spirit by one of them, who was to try the experiment within a week.

Having assumed so dubious a task its imprudent undertaker proceeded to contrive ways and means whereby to accomplish it. To avoid unpleasant consequences the attempt must find justification in some occasion of momentous importance. This he pretended to find in a rumor just then prevalent in the camp of an intended surprise of the army by the British at that time occupying Philadelphia. This was true. A night attack had been planned, but was averted by information given by a Quakeress. Said rumor he would make his apology for breach of orders, exculpating himself on the ground of its intrinsic moment and the assumed ignorance of the commander in-chief, so that the worst he could have to fear would be a kind rebuke for overweening patriotic zeal. He accordingly concocted his story in set phrase and went—albeit with much misgiving—to headquarters. The General's room was at the end of a long corridor, in which an armed sentry was walking. Being promptly challenged by that official, something like the following ensued:

"I wish to see the General immediately."

"You cannot, sir: you must know the orders."

"Yes, I know them, but I have a grave communication which I wish to make to him forthwith."

"Can't help it, sir; you must come after 2 o'clock. I have my orders and can't break them."

"Friend, suppose I know of a matter of vital interest to you, to me, to him, to the whole army, which an hour may render fatal to us all; don't you see that such a thing ove rides your orders and that the consequences of delay will be laid at your door? I must see him and tell him."

The sentry was staggered by his earnestness and the apparent pressure of the occasion, and to the applicant's continued urgency at length said: "All orders are to permit no interruption of the General till 2 o'clock. I dare not knock to announce you. If things are as you say and you are willing to take the responsibility, go and do so, and the Lord save both of us."

The officer went to the door and knocked. No answer. Again: still all silent within. His heart thumped heavily and he was more than half minded to forego his purpose. But that anticipated laugh at the mess table over his failure spurred him to one more attempt. Immediately following the third knock a sound as of a chair suddenly and violently pushed over a bare floor was heard, followed by a heavy tramp of boots toward the door. With a quick jerk of the bolt it flew open and Washington, with head thrown back and face flushed with anger, stood before him, with the exclamation, "What does this mean, sir?" The culprit attempted to summon up his concocted story, but the expression of his interrogator's face, such as he had never seen before, and the access of a sudden consciousness of his frivolty made him stammer in utter forgetfulness of his well-digested words. But not for long, for Washington cut him short with "Begone! and consider yourself under arrest, sir." As he turned to sneak away he heard these further words shot at the sentry: "Do you know your orders?"

"Yes, General, but—"

"Then obey them, and if this occurs again I will thrust your bayonet through your cursed body."

Then succeeded a bang of the door more heavy footfalls and the usual silence. What were the ultimate results to the officer of this escapade my informant did not know. He won his bet, but was accustomed to say that he would rather encounter a drum-head court-martial than to have faced that look and act of Washington.

Promptness in Business Men.

Promptness in everything that pertains to business is an absolute essential to success; the eleventh hour man, who is always dilatory and procrastinating, may drag out a precarious and even a prolonged existence, but he will never achieve eminence in his calling or be anything more than an incubus, clinging, like a veritable old man of the sea, to the shoulders of his more enterprising neighbors and business associates. Procrastination is the thief of time, [illegible] a prompt business man is the [illegible]

JOHNSON'S NEW
UNIVERSAL CYCLOPÆDIA.
"THE BEST."—Planned by HORACE GREELEY, LL.D.
All our greatest institutions of learning have adopted it as THE BEST, viz: Harvard, Yale, Brown University, Cornell University, Amherst, Hamilton, Rochester, Madison, University of California etc. Thousands of our greatest scholars have declared it to be THE BEST. It is not only the BEST CYCLOPÆDIA but is a whole library of "UNIVERSAL KNOWLEDGE" from the pens of the greatest scholars on earth. 2,000 of the most eminent scholars living have become responsible for the accuracy and thoroughness of the work, by signing their names to the articles.
From Hon. A. R. Spofford, Librarian of Congress, Washington, D.C.: "JOHNSON'S UNIVERSAL CYCLOPÆDIA is a work which is found in the library of Congress to answer more questions satisfactorily than any other work of reference."
"Not equalled by any other," etc.—Hon. Joseph P. Bradley, LL. D.
"By far the best," etc.—Hon. Alexander H. Stephens, LL. D.
"The best we have," etc.,—Hon. Wendell Phillips, LL. D.
SOLD BY SUBSCRIPTION ONLY.
For particulars to obtain or sell it, etc., address, C. H. LIBBY,
General Manager Pacific Coast,
MARYSVILLE, - - - - CAL.
Send in your orders by mail for the holidays to C. H. Libby, as above.

PRIZE SEND TEN CENTS FOR POSTAGE and receive free one new complete useful articles. Just out. Agents wanted. Address, HART NOVELTY CO., San Francisco, California

GOLD AGENTS ARE MAKING FORTUNES selling our new and popular books, "The Universe," "Lives of the Presidents," "Daughters of America," "Amelia Lidis, usable Handbook," "History of Christianity," and the latest and quickest selling novelties. Be first in the field. Address, GORHAM & CO., Publishers and Agents, San Francisco, California

HELP for working people. Send 10 cents postage and we will mail you free, a royal, valuable sample box of goods that will put you in the way of making money in a few days than you ever thought possible at any business. Capital not required. You can live at home and work in spare time only, or all the time. All of both sexes, all ages, generally successful. 50 cents to $5 easily earned every evening. That all who want work may test the business we make this unparalleled offer: To all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, directions, etc., sent free. Immense pay is absolutely sure for all who start at once. Don't delay. Address STINSON & Co., Portland, Maine.

WIN more money than at anything else by taking an agency for the best selling book out. Beginners succeed grandly. None fail. Terms free. HALLETT BOOK CO. Portland, Maine.

A PRIZE. Send six cents for postage and receive free a costly box of goods which will help you to more money right away than anything else in this world. All of either sex succeed from first hour. The broad road to fortune opens before the workers, absolutely sure. At once address TRUE & Co., Augusta, Maine.

$200,000 in presents given away. Send us 5 cents postage and by mail you will get free a package of goods of large value, that will start you in work that will at once bring you in money faster than anything else in America. All about the $200,000 in presents with each box. Agents wanted everywhere, of either sex, of all ages, for all the time or spare time only, to work for us at their own homes. Fortunes for all workers absolutely assured. Don't delay. H. HALLETT & Co., Portland, Maine.

THE GREAT ENGLISH REMEDY

It is a never failing Cure for Nervous Debility, Seminal Weakness, Spermatorrhœa, Lost Manhood, Impotency, Paralysis, and all the terrible effects of Self-Abuse, youthful follies and excesses in maturer years, such as Loss of Memory, Lassitude, Nocturnal Emissions, Aversion to Society, Dimness of Vision, Noises in the Head, the vital fluid passing unperceived in the urine, and many other diseases that lead to insanity and death.
WE WILL GIVE TO ANY PERSON this Five Hundred Dollars for a case of this kind the VITAL RESTORATIVE (under the special advice and treatment) will not cure, for anything impure or injurious found in it. Dr. Mintie treats all private diseases successfully without mercury. Consultation Free. Thorough Examination and Advice including analysis of urine, $5.00. Price of Vital Restorative $1.50 a bottle, or four times the quantity, $5.00; sent to any address upon receipt of price, or C. O. D., secure from observation, and in private name if desired, by
A. E. MINTIE, M. D.
11 Kearney Street, San Francisco
SAMPLE BOTTLE FREE
Will be sent to any one applying by letter, stating symptoms, sex and age. Strict secrecy in regard to all business transactions.

DR. MINTIE'S KIDNEY REMEDY, NEPHRETICUM, Cures all kinds of Kidney and Bladder Complaints, Gonorrhœa, Gleet, Leucorrhœa. For sale by all druggists; $1.00 a bottle, six bottles for $5.00.

DR. MINTIE'S DANDELION PILLS are the best and cheapest Dyspepsia and Biliousness cure in the market; for sale by all druggists.

"She Stoops to Conquer."

Mr. Lewis Grummit, formerly an eminent grazier in Lincolnshire, died in that county at a very advanced age. It was from a hospital joke of this worthy man, that Dr. Goldsmith took the hint of Marlow's mistaking the house of Mr. Hardcastle for an inn, in the comedy of "She Stoops to Conquer." The circumstances was as follows:

Mr. Grummit, late one night, met a commercial traveler, who had mistaken the road, and inquired the way to the nearest inn or public house. Mr. G. replied, that, as he was a stranger, he would show him the way to a quiet, respectable house of public entertainment for man and horse, and took him to his own residence. The traveler, by the perfect ease and confidence of his manner, showed the success of his host's stratagem, and everything that he called for was instantly provided for himself and his horse. In the morning he called, in an authoritative tone, for his bill, and the hospitable landlord had all the recompense he desired in the surprise and altered manners of his guest. Many other whimsical acts of kindness are related of him.

Rossini, the composer, used to set to work at ten o'clock in the morning, having risen at nine. His toilet took half an hour, and his breakfast, house-gossip, etc., another half-hour; then he took his pen and wrote continually. From ten to twelve, while he wrote, numbers of people came, some with letters of introduction, or old friends, and so on. He was very glad to make the acquaintance of talented young artists; he received them with immense kindness, giving them advice and sometimes letters. But what he absolutely hated was to be stared at as one of the sights of Paris. Once his old friend, Caraffa, came and told him, "There is a Russian princess on the Boulevard who waited two hours yesterday to see you pass; she wants much to make your acquaintance. What shall I tell her?" "Tell her," said Rossini, "that I am excessively fond of asparagus. She need only go to Hotel et Chabot and buy the finest bunch she can get, and bring it here. I shall then get up, and, after she has well inspected me in front, I shall turn round, and she can complete her inspection by taking the other view too, and then she may go."

Shaken up by an Earthquake.

An officer said he had permission to spend the Christmas holidays with his family at Alhambra, and had a few friends to dinner. After dinner the friends left and he sat talking with his wife and children, five in number, when suddenly one end of the room rose up the feet. The shock threw the whole family to the floor, with the lamps and other articles on the tables and shelves. They remained in total darkness, dazed and wondering what had happened. Presently he supposed it was an earthquake, and called to his wife and children to come out into the street. He reached the street door and the street was in total darkness. The air was filled with the dust of crumbling buildings. Afraid to go out he stood shivering and undecided, when a second shock came and the kitchen fell in, killing two servants. A piece of wood fell upon his wife, breaking her leg. He then carried his wife out over a pile of ruins. The narrow dark streets were so changed by the debris that it was hard to recognize them. He reached the open fields, where he found that many had preceded him. He left his wife with friends and returned for his children. He brought three the next trip, and then the other two. All the way, while crawling over piles of ruins he heard the cries of those that had been caught and could not extricate themselves. Every voice was familiar. He met neighbors telling each other of the loss of relatives and friends. The horror of such an experience was unparalleled. The night was spent in the open fields, shivering on the ground, entertaining fears and suffering grief, terror and a horrid uncertainty.

The law of finding, says a writer, is this: The finder has a clear title against the world, except the owner. The proprietor of a coach, or a railroad car, or a shop has no right to demand the property or premises. Such proprietors may make regulations in regard to lost property which will bind their employes, but they cannot bind the public.

PANTHER RATTLESNAKE.

And a Lone Fisherman Have a Very Lively Time of it.

Three men sat on a settee in one corner of the barroom of the Miners' Arms, in Front street, last evening, with heads close together, smoking short briar-wood pipes and talking in a slow way, as if they had to stop and throw their weight on it before getting a word longer than one syllable spoken. They were dressed in corduroy trousers, tucked into the tops of their boots, and short thick coats. They were going over their experiences in the Rocky Mountain regions, the hotel being a resort for old-country miners on their way East and West. Finally one of the group named Andrew McDonald straightened up and said, in a louder voice than he had hitherto used: "You may talk about sea serpents, but my pards had an adventure with a rattler last spring that knocks out any yarn you ever heard."

Half a dozen loungers and a reporter gathered around the miner while he continued:

"His name was Herman Fish, and he came from western Ohio. We called him Heme for short. He could do two things better than any man I ever saw. One was to fish and the other was to handle a blacksnake whip. I reckon most of you know what a blacksnake whip is. Heme could pick a fly from the ear of the off mule of a four-in-hand and never let the mule know a whip was anywhere about.

"Last spring he and I got on a spree in St. Louis, and when we shook ourselves together again we found ourselves in a town called Paola, Kansas. As Heme's head began to shrink, he took a notion that we should go away from there by the overland route, and so we went down to Fort Scott and joined the caravan that was bound for New Mexico across the Staked Plains."

"A caravan across the Staked Plains from Fort Scott last spring?" the bartender remarked with some emphasis.

"Yes," said McDonald, as though irritated. "We had followed the procession about two weeks, when one evening we camped on one of the northerly branches of the Red River of the South in a bit of timber. Without waiting a minute Heme drew a fish line and pole from its hooks under the canvas of our prairie schooner and started down the creek for a mess of fish. Somehow he didn't seem to have his usual luck. The sun was just sinking, and Heme walked on from pool to pool, now and then dropping his line in without success till he was about half a mile down stream. There in an open space, where the grass was short but the woods thick, a few rods away he found a big dead tree that had fallen into the creek and washed around with the top down stream. Just below this the water was deep and still, and as his hook sank into the water he felt the first blood string tug of the evening. It was a catfish. Not very exciting sport, you will say to catch a bullhead, but then the eating of them is never to be despised. For fifteen minutes Heme was so busy that he did not notice the flight of time, but just as he felt a tug on his line for the eighth time, he became aware that something was about to happen that he had not anticipated. He said afterward that he felt just as a man does who wakes up at midnight to find him elf bolt upright in bed, hearing nothing and wondering what was the matter. The feeling was so strong that instead of landing the fish he looked slowly around. Not five feet away to his left was a big panther, arching its back and rubbing the sides of its head along the grass and smiling at him, almost, as it lashed its tail from side to side. It was playing with him cat fashion. Meantime the catfish had swallowed the hook and was tugging away so hard that, in spite of his scare, which made his blood brighten hat tremble, he turned to look at the line and the bobbing cork which he always fished with. From the agitated water about the cork his eye fell on a six foot rattler that was making its way over the edge of the bank of the creek from the old dead log, and was headed directly for him. From the snake he looked to the cavorting panther, and then back to the ugly reptile, afraid to strike with his pole lest the panther should spring on him, and afraid to stand still lest the snake should attack him as soon as it was near enough. Somehow the movements of the panther, as it trotted about, rolled over, or jumped stifflegged into the air, proved a stronger attraction, and for a minute he watched it attentively, until the fish gave a last effort to free itself from the hook. The panther was walking away as if to leave its victim in peace, when Heme looked around and saw the snake was passing him headed for the timber. Then the inspiration came which saved his life. He had the pole in his left hand. Stooping over he caught the reptile by the tail. Quick as this was done the panther saw the motion, and turning about settled for a spring as Heme whirled the snake easily but rapidly over his head. The panther was too late. Heme's skill with the whip enabled him to drop the rattler comfortably about the panther's neck, and the next instant buried its fangs in the beast's tongue that showed through its half open mouth.

"Then Heme got really frightened, and, with a yell, he plunged into the creek, and floundering across, ran breathlessly up stream to the camp. When he had managed to pass out his story, the whole camp roared with laughter at the comical figure and at what seemed to be about the most unlikely yarn they had ever heard."

"See here, Mack, who primed you to tell that?" said the bartender wiping his hands on his partly white apron.

"Primed be ——," said the story teller. "It's true. I've got the snake's rattle, and I'll show it to you."

He took a solid looking valise from behind the bar, and, while fumbling for his key, said: "It took us about ten minutes to reach the spot where Heme had been fishing. The panther was still alive, but he was on its last pegs. The snake was in two pieces, the panther having chawed its head off after he was broken. I cut the rattle off, and here it is."

There were twelve of the rattles, besides the button on the end. The snake was thirteen years of age. The bartender walked behind the bar and passed down a big cut-glass bottle, containing a yellowish fluid. As he placed a number of little smooth round tumblers beside it he said: "Help yourselves, boys. I give it up. The rattles prove it."

He Thought It Would Do.

"I want a divorce from my wife," said a Washington street broker to his attorney, "but I don't know how to begin it."

"Any ground for scandal?" asked the attorney.

"No; oh, no."

"Did she ever hit you?"

"No; her temper is quite even."

"Did she ever blow out the gas?"

"No—she lets it burn. Maybe that would be grounds, eh?"

"No," said the attorney. "In that case she would call to see aid the gas company, and we would have to struggle with a monopoly. That wouldn't do."

"No," said the applicant, sadly.

"Did she ever scald any of the children?" asked the attorney brightening up.

"Haven't got any to scald. I suppose it wouldn't do to say she scalded the children of the next door neighbor?"

"No."

"Then I don't know what to do or say."

Then both men looked thoughtfully out of the window for nearly seven minutes.

"She drank out of the finger bowl when we was on our bridal tour," said the husband, hesitatingly.

"If you get the date and witnesses," said the lawyer quickly, "I think that will be sufficient—under our law."

Then they went out together and called for two schooners of beer.

Wasn't Posted.

The editor of the Deadwood *Roarer* attended church for the first time last Sunday. In about an hour he rushed into the office and shouted to the telegraph editor:

"What in the blanked blazes are you fellows doing? How about this news from the seat of war?"

"What news?"

"Why all this about the Egyptian army being drowned in the Red sea. Why, the gospel sharp up at the church was telling about it just now and not a word of it in this morning's paper. Bustle round, you fellows, and get the facts, or the *Scalp Sho* will get a beat on us. Look spry there, and run an extra edition, if necessary, while I put on the bulletin board, 'Great English Victory in the Soudan!'"

A Stumper.

Scene: Chicago.

Small boy (to his sister): "Belle are you going to Heaven when you die?"

Belle: "I hope so."

"Will you wear wings?"

"I suppose so, Johnnie."

"But Belle—"

"Yes, Johnnie."

"What'll you do with your feet?"

The Power of Daniel Webster's Gaze.

"One Sunday a student from Andover occupied the pulpit, my father not intending to take any part in the exercises. The young minister went along very well with the opening prayer and the Scripture lesson, but when he had read only a verse or two of the hymn he became confused, stammered, and at last his voice failed him entirely. As he seemed to be taken suddenly ill my father finished the service, preaching an extemporaneous discourse. On the way home in the carriage the young man who by that time had quite revived being pressed for an explanation concerning his conduct, finally confessed: "Well, sir, it was merely an unaccountable nervousness. Just as I was reading the second stanza of the hymn a gentleman came into the church and sat down in a front vacant pew directly before me, fixing such great staring black eyes upon me that I was frightened out of my wits. Until he was then told he did not know that Daniel Webster was a member of the congregation or an inhabitant of the town."

Thirteen is an unlucky number for a poor man to have in his family.

They were having a heated argument. He said:

"Stop your quarreling. People will think we are crazy."

"No they won't, dear," she replied "They will think one of us is crazy."

"Ah!" he responded, "there's your egotism again."

CENTRAL AMERICA.

Healthful Climates where Fruit and Spices Grow.

It may not be uninteresting at this time to know that Central America comprises an area somewhat larger than the states of Missouri, Illinois and Indiana, Nicaragua alone being about as large as Illinois. The population is very sparse. Guatemala has 1,252,000; San Salvador, 554,000; Nicaraguan 275,000; Honduras, 350,000; Costa Rica, 135,000; Panama, 220,000. The soil is capable of supporting ten times this population. The larger portion of the country is forest, the trees being chiefly mahogany, logwood, brazil-wood, live oak, rustic pine, copal-wood, cedar, rosewood, and ironwood. The forests are brilliant with those gorgeous air-flowers, the orchids, and are alive with monkeys. The agricultural products are beans, grain and fruits—bananas, cocoanuts, oranges, plantains, lemons, guavas, pineapples, citrons and limes. Bananas and cocoanuts are easily raised and the yield is enormous. The steamers that ply between Central American points and New Orleans usually bring in as cargoes 100,000 cocoanuts and 25,000 bunches of bananas, which pass through all the hands of Italian and Sicilian fruit merchants in the Crescent city and go to all the Western States. All the bananas and cocoanuts in our Western markets come from Central America. A few Americans are engaged in fruit-raising in Honduras and find it profitable. The coffee tree thrives in all the Central American states, and ginger, annatto, vanilla, aloes, gums, caoutchouc, copaiba, and other valuable articles of commerce are produced. The country abounds in gold, silver and copper, but the deposits are not worked by the lazy natives, who are content to lead a languid existence without attempting to develop the wealth in their soil and forests. The climate is warm and unhealthful on the coast, but on the highlands in the interior temperate and salubrious; and that it is not altogether unfavorable to enterprise is proved by the vast ruins of cities and temples, the work of a civilized and cultivated people now extinct, at Coban and other places in Guatemala and Honduras. Cattle are one of the products of the country; they are raised without trouble or expense, as they subsist on the wild grass, and they are slaughtered chiefly for their hides, which are shipped to Europe. Guatemala and Honduras have exhibited some signs of waking up in the last five years. Three railroads have been built and others projected, and grants of lands on very favorable terms are offered to all who will come and settle on them. A few thousand North Americans would bring the country to life and make it one of the most attractive parts of the western world.

A Course of Reading.

It is to be doubted if any person of any intellectual force and originality would ever be able to get through what is popularly known as "a course of reading," and it is at least certain that few gems of genuine mental life could be expected to survive the ordeal if passed through. The instant the mind is genuinely aroused and interested, the trammels of the book list are overleapt; and it is only mechanically plodding mediocrity that trudges faithfully and stupidly along a line of thought some one else has marked out. In the first place, it is worse than useless to read what one does not enjoy. The mind not only does not digest it and does not assimilate it, but becomes dull and deadened by the mechanical process of cramming which it is made to undergo, until it ceases to be capable of digesting anything normally and easily.

Advice in regard to a "course of reading"—if the detestable phrase may be forgiven—may be asked and given with results that are excellent, provided always that the reader recognizes that if the course marked out fails to so arouse and excite him that he breaks away from it of his own volition, it is a failure and had better be abandoned. The most that others can do is to indicate where a beginning is to be made, but from the starting point the lines of work must diverge with the variety arising from original impulse, or all comes to nothing. The rubbishy talk of which we hear so much nowadays of courses of reading laid out by the Home Education society, the Chatauqua union, or any of the rest of these well-intended and equally unintellectual contrivances for the mechanical development of the intellect, is one of the most annoying as it is one of the most pathetic of the signs of the times.

It is pathetic because the prevalence of talk of this sort shows how widespread is the desire—even if seldom of very profound depth—for culture and mental development; it is annoying because it is painful to see eager ignorance put off with a stone when it asks for bread; and encouraged in precisely the most pernicious of misconceptions, the idea that culture, like gingerbread, is made by a recipe. Superficiality is the besetting sin of the age, and one of its innumerable symptoms is the prevalence of this absurd idea of the value and desirableness of courses of reading.

It is estimated that two large parties given in Boston recently were productive of the distribution of $200, (0) among artisans and others.

Michael Angelo.

This great sculptist was born in 1475, four hundred and ten years ago on the 6th of March at Settignano, thirteen miles from Florence. His correct name is supposed to have been Michael Angelo Buonarroti. Mike began to draw as soon as he was large enough, and for miles and miles around Florence they still point with pride to pictures on the high board fences of which he is supposed to have been the author.

While very young, Michael went into the Madonna business, and now it is a pretty poor Italian town that can't afford a Madonna of some kind. The first great work that Mr. Angelo executed in Rome was the "Drunken Bacchus." It seems that Bacchus was a first rate boy if he had let liquor alone. But he would drink. He would go and fill his skin as full of old-fashioned red liquor as it would hold, and then he would hunt up a sculpture and get himself measured for a bust.

Early in the sixteenth century, Michael executed a statue of David, from memory. This statue weighed 18,000 pounds, and several Americans who have been over there and who were perfectly familiar with the way David looked pronounce the expression perfect. It takes a certain kind of American to settle the merits of any great work, from the creation itself down to the latest joke.

The fame of the great sculptor had by this time reached the ears of Pope Julius II, who was meditating the erection of a colossal mausoleum for himself in St. Peter's. A serious misunderstanding arose, however, between Michael Angelo and the pope over this work, and the sculptor left in disgust. It is not yet fully settled what this trouble resulted from, but as near as I am able to learn the pope became enraged and discharged the scultor because, at the last moment and when it was too late to remedy the evil, he found that the mausoleum didn't fit him. If this be true, I am free to say that Mike was in the wrong. No man wants to pay a large sum for a mausoleum and then find when he comes to try it on that it bags at the knees.

Later on, at Florence, the great artist designed a magnificent work representing a company of soldiers startled by the call of a trumpet while bathing in the Arno. This was never completed and only the cartoon itself remains to suggest what a masterpiece was designed. So life-like is the cartoon alone that on a still day you can hear the snort of the trumpet as the soldiers rush to the bank. As you gaze at the picture you are lost in admiration and you hardly know whether to go wild over the master's great genius or to go and inform the police.

Michael frescoed the Sistine chapel ceiling in twelve months; and did it well, too. He was a rapid as well as a thorough artist, and his head was literally full of ideas.

At last he and the pope again became reconciled, and in 1513 the sumptuous pontiff died leaving instructions for Angelo to cut his mausoleum a little higher in the neck and his executor would settle the bill on sight.

It would take many pages to give even a rough outline of the many beautiful monuments which Michael Angelo has erected to his own undying fame as a sculptor, painter and poet. He lived to be ninety years old, and then, full of years and crowned with the glory he had carved out by his own genius and industry, he died.

Though his work was beautiful, he was not himself beautiful. He ran largely to brow, but his nose was broken in a little misunderstanding that he had at school with a young designer, who thought it would be a good scheme to put what was termed in Florence in the fifteenth century a tin nose on Mike. This gave him a look of pain, and his nose served to convey the idea that the great sculptor has just detected the presence of Limburger cheese under his pillow.

As a general thing, however, great men are not beautiful. The pretty young man has really but one avenue open to him in the world's great race. If he cannot mash a tough old heiress whose father has got the pip, he has very little chance in the mighty struggle of life.

If my son should show any signs of great physical beauty, having taken them from him mother's side of the house, I would immediately hump my back ready to bear a great burden; for, judging by the world's history, his father in law and I would have to take a turn about in maintaining the young man and his cumulative family.

The Young Husband.

The robin nesteth again and he clotheth himself in sackcloth and ashes and runneth swiftly unto gates and knocketh, and telleth the doctor that the wife of his bosom travaileth much, and rusheth back again.

The old woman prophesieth a boy and he jumpeth up and down and cracketh his heels together with joy; the doctor speaketh words of wisdom and cautioneth him not to ratify before the returns are all in.

The night weareth wearily on and the young man waxeth impatient, but the old lady speaketh words of cheer and prophesieth yet again, and he bideth his time and awaiteth his reward. A cry smiteth his ear and the drum thereof, and he biteth his lip and kicketh himself again as the old woman poketh her head in the door and bringeth tidings of two more girls.

SATURDAY, MAY 16 ..... 1885.

C. Mulholland,
EDITOR & PROPRIETOR.

MILLER & LUX have begun more riparian suits in Kern County. The success of these suits would convert extentensive tracts of fine farm land into a deseri.

ENGLISH officers in India report that that the course of the Government tn yielding to Russia has given a terrible blow to English prestige in that country. To bitter hatred a feeling of contempt equally profound is now added.

LAW suits ere not near so frequent since the new law went into effect, compelling complainants to put up money before a suit can be begun. As with other luxuries, people find they can get along without so much law when they must pay cash on the nail: it is a good plan to be pursued in all cases.

THE way to make and keep a market for any product, whether grain or manufactured, is to offer nothing for sale but what is as good as can be purchased elsewhere. Buyers are not governed in their choice by sentiment, and even seldom by difference of price, especially in buying food of any kind. A good article will sell, when an inferior will not even if offered at much less cost.

THE people of Victoria, B. C. threaten to rebel against the Dominion Government if the continued influx of Chinese is permitted. Local laws have been passed to hinder the immigration of Chinese into the Province, but these laws have been overruled by the Dominion Government and now bloodshed is threatened unless relief is afforded.

THE *Engineering & Mining Journal* of New York, in its issue of May 2nd, locates the Modoc Con. mine and furnace in Modoc county. The *E. & M.* Journal will please note that the mine and furnace are both in Inyo county, California, about five hundred miles south of Modoc county. The fact is, that the *E. & M.* Journal garbeled an item that appeared in the *Inyo Independant* two weeks before. If the *E. & M.* Journal had credited the item it would not have fallen into such a mistake. But an eastern paper may well be excused for ignorance of California geography, in view of the fact that a leading San Francisco paper recently described Inyo county as being tn the State Nevada. It is singular that the Editor of a great daily paper should know so little of his own state, as to locate one of its counties, having an area or twelve thousand square miles, in another state.

THE LOGIC of facts is strongly against the arguments of the opponents of silver coinage. The *Mining Review* notes that the last statement or report of the Director of the Mint is one of the strongest arguments to prove the falsity and absurdity of the efforts that have been made for the purpose of rendering our silver currency unpopular, that could heve been produced. The claim has been persistently presented that the continued coinage of silver would result in an exportation of our gold coin, and an influx of silver from every nation of the world expressed in the statemen that "the United States would become the dumping ground for the silver of the whole commercial world." A moments reason would show that silver has not yet become so worthless that it is parted with or given up without some kind of an equivalent of equal value. Consistency, however, has not been one of the chief virtues of those who have endeavored to render this currency useless. The last report of the Director of the Mint shows that instead of our gold being drawn from the treasury, that during the past year only $1,115,000 in gold were exported, and that during the same period, instead of ship-loads of silver from other countries being dumped on our shores, the past year witnessed the exportation of $16,400,000 in silver, which cannot be taken as a very good proof of the claim that has been made. If the results that are predicted are to occur it is certainly time that evidence of the fact was presented. Another point has been urged as one of importance, that our silver currency was idle and useless, not entering into circulation, but was piled up in the Government vaults. A recent statement of the Treasury shows that more than one-fourth of our gold coinage is at present locked up in the vaults of National banks, another one-fourth is held in the vaults of the treasury, and that probably not more tnan $150,000,000 in gold is in actual circulation. While of the $200,000,000 of silver the banks hold only about one-fifteenth, and it is therefore reasonable to suppose that the remainder is constantly being used in the daily transactions of business in in the form of certificates.

THE town of Dagget must be quite a lively place, but the exuberant spirits that prevail might not be altogether pleasing to dwellers in quieter communities. The Calico *Print* says: "The other day one of our citizens made a bet with another that there had been filty fights in town within ten days; but to the immortal credit of the aspiring 'hub of the desert,' he lost his wager, for there were only twenty-seven encounters.

Scientific Miscellany.

The emperor of Germany has conferred an order of knighthood upon Sir Joseph Lister, the eminent British surgeon, whose anti-septic method of surgery has done so much for suffering humanity.

A brain model of gigantic size has been made for an American museum by Buechi of Berne. It is about four feet in height by two feet and a halt in width, and shows the intricate mechanism of the brain in detail.

A specimen of ancient dentistry, in the form of dental bridge-work made by the Etruscans in the fifth century before Christ, has been discovered in an old burial place near Civita Vecchia by Dr. J. G. Van Marter, of Rome.

Experiments recently made with wet and dry coal in the evaporation of water have shown that a loss of from fifteen to twenty-five per cent results when coal is used while wet—that is, the heating value of coal is that much less when water is added.

The parasitic character of diphtheria has been established by two investigators—Klebs and Leffler—who have independently found organisms which have been proven by experiments on guinea pigs and birds to be the specific germs of the disease.

An interesting exhibition of whale skeletons and products has been held in Hamburg. The most imposing exhibit was the skeleton of the blue whale, the greatest animal on earth. It measured 75 feet in length, and was mounted in its natural position.

According to Herve-Mongon, the system of telegraphic weather warnings in France was created by Leverrier in 1855. In 1878 a central meteorological bureau was established, and numerous observatories had been erected all over the country, while Paris was in telegraphic connection with 1,500 stations.

Potato Celluloid.—A material possessing the properties of celluloid is now made from potatoes, and is being used in France for imitation meerschaum pipes, and for billiards balls. The substance is prepared by boiling the peeled potatoes in dilute sulphuric acid—eight parts of acid to one hundred parts of water—for thirty-six hours, and then drying between blotting paper by pressure.

In the opinion of Sir John Lawes, a greater profit may be returned from sewage if cast into the sea than if applied to the land, for the reason that sewage will supply the enormous quantities of phosphate of lime, potash, and nitrogen which fishes require, but which exist in the sea only in small quantities. As much, at least, of these substances should be returned to the sea as our fisheries take from it.

Balloons in the Soudan Campaign.—The first attempts at British military ballooning are to be made in Africa, three balloons having been sent out for the purpose of making captive ascents for watching the enemy's movement. A hundred or more iron cylinders containing compressed dydrogen for inflating balloons form part of the equipment, and a gas-factory and pumping station will be established at Suakin for refilling these reservoirs. Telephonic communication will be maintained between the balloons and the ground.

An Age of Horn.—A variety of prehistoric objects in horn—such as amulets, cups, knives, daggers, rings, buttons, bracelets, etc.,—have been found in a stratum existing at a depth of about five feet in the mud of Lake Neuenburg, in Switzerland. The finder, Herr G. Kaiser, believes them to be older than the stone and bronze implements of the same locality, and he proposes to call the period to which they belong "the age of horn." It may well be doubted, however, whether the ancient lake people ever experienced an epoch for which such a name would be justified, as it is evident that some implement—probably of stone or bronze—must have been used in cutting the horn.

Lung Diseases of Wild Animals.—In the period from October, 1881, to the close of 1884, there died in the gardens of the London Zoological society 583 mammals, 1408 birds, and 788 reptiles. Mr. J. Bland Sutton states, in a report to the Pathological society, that of the death among the mammals only five were from genuine pulmonary tuberculosis or consumption, showing that the general notion that wild animals in captivity are especially liable to that disease is erroneous. Of the mammals 303 were quadrumana, and of them thirty per cent had other forms of pulmonary affection. Bronchitis attacks a very great variety of animals, but other well known chest diseases appear to be chiefly confined to certain groups. The carnivora, for instance, are very liable to double pleurises and pneumonia, while ruminita have the peculiar disease known as "Perlsucht"—the so-called bovine tuberculosis. In birds is noticed a liability to inflammation of the airsacs, which gives rise to peculiar exudation in which mould develops and spreads through the lung.

Bringing Matters to a Crisis.

A rich young man was courting a poor young girl, but he was slow in bringing matters to a crisis.

So one day she complained of the hardships of being poor.

"Poor!" he exclaimed gallantly. "A young lady with your wealth of mind and grace of person poor? Why, such charms as you possess are worth a mint of money."

"Well, I wish I had the mint and somebody else had the charms," she said, and the crisis came.

The Polar Light.—Following up small experiments made in 1871, Professor Selim Lemstrom, of the Finnish Meteorological station at Sodankyla, Lapland, attempted in 1882 to produce an aurora on a large scale from the electricity supposed to be flowing from the air to the earth, the means employed being a "discharging apparatus," consisting of a network of pointed wire conductors spread over the top of a mountain, insulated and connected with a galvanometer and the earth at the foot of the mountain. A diffuse light, which the spectroscope showed to be identical with the aurora borealis, was often seen hovering over the wires, and on some occasions rays became visible. Continuing his researches in 1883 and 1884, Professor Lemstrom now finds himself able to assert very positively that the aurora borealis, which has long been a disputed enigma, is the result of an atmospheric electric current, and that this current can be measured and studied by means of his "discharging apparatus." The zone of frequent auroras in the northern hemisphere is a narrow belt encircling the magnetic pole, and crossing the meridian of Washington in latitude 56 degrees, and that of St. Petersburg in 71 degrees. Professor Lemstrom finds the existence of a belt of terrestrial currents similar to the belt of auroral currents to be very probable.

RED STAR
TRADE MARK.

for sale. Lovers of fine stock are invited to call and examine my herd. J. H. MULLER,
759tf Big Pine, Inyo Co., Cal.

INYO INDEPENDENT.

INDEPENDENCE, CAL.:

SATURDAY, MAY 16.....1885

—Piute dogs are getting too numerous.

—Yuba county has asked the Governor to call out the militia to force the hydraulic miners to cease operations.

—Many thousands of sheep have passed Independence during the week all going north. Feed is splendid along the mountains.

—An effort is now being made to have a 4th of July celebration at Independence. Particulars will be published next week.

—Auditor Massey, of Mono county, having become disgusted at the action of the late Legislature in reducing his salary to $200, has resigned.

—Road Master James has been doing good work on the roads around Independence and still continues at it. Captain Wat makes a good Road Master.

—A brother to Conductor Nibecker, of the C. & C. railroad, died at Belleville last Sunday. The deceased was in the employ of the same company.

—The *Trwe Fissure* says Owens Valley supplies all the honey used at Candelaria. Owens Valley can supply any number of tons of the finest honey in the world.

—It is stated on good authority that Van Sickle, the missing rancher from Genoa, Nevada, is at New Orleans and does not intend returning to his family.

—W. R. Tibbets has a yearling colt that measures fifteen hands high, and and is of proportional weight. This fine colt has immense shoulders. He was sired by Rowan's Horse "Cheer."

The unsettled lands in Owens Valley are now gay with a profusion of wild flowers; rich purple flowers of a variety of wild larkspur; and beautiful crimson and pink cactus are most conspicuous.

—The price of sugar in the San Francisco market never was so low as at present. Last week cube sugar was quoted at 6 ¾ cents and extra C at 5½ This was for sales of not less than twenty-five barrels on thirty days time.

—A large amount of produce is shipped every week from around Bishop Creek to Candelaria, Belleville and other points along the C. & C. railroad. The opening of this market is largely due to the energy of John L. Bourland. A live man is a benefit to any community.
